75. Marco Estrada, SP, MIL.....430.5	150. Hyun-Jin Ryu, SP, LAD.....398	225. Sean Marshall, RP, CIN.....201	300. Nyjer Morgan, CF, MIL.....0

Editor's Note: In an effort to offer you as much information as possible for Draft Day, we've included players' projected Head-to-Head points for 2013. The CBSsports.com rankings included here take into account position scarcity, injury risk, multi-positional eligibility, role uncertainty and other factors, so they might not correspond exactly with the point totals.

Al Melchior

1. Ryan Braun, LF, MIL.....612	76. Jonathon Niese, SP, NYM.....456.5	151. David DeJesus, LF, CHC.....324.5	226. Frank Francisco, RP, NYM.....217

Editor's Note: In an effort to offer you as much information as possible for Draft Day, we've included players' projected Head-to-Head points for 2013. The CBSsports.com rankings included here take into account position scarcity, injury risk, multi-positional eligibility, role uncertainty and other factors, so they might not correspond exactly with the point totals.

Nando Di Fino

Editor's Note: In an effort to offer you as much information as possible for Draft Day, we've included players' projected Head-to-Head points for 2013. The CBSsports.com rankings included here take into account position scarcity, injury risk, multi-positional eligibility, role uncertainty and other factors, so they might not correspond exactly with the point totals.

Player Rankings

Catcher

Scott White

1. Buster Posey, SF.....	443.5

Multiposition-Eligible Players for Draft Day 2013

We break down the 34 hitters and 12 pitchers who will be eligible at more than one position in a standard Fantasy Baseball league on CBSSports.com for 2013. For reference, we listed the games played by position in 2012.

The standard we use for hitters is at least 20 games at a position in the previous season. Each of these players has played 20-plus games at the positions assigned to them. The first position listed will be his primary position for next season in our Fantasy Baseball leagues.

Multiposition-Eligible Players for Draft Day 2013

Player	Pos1	Pos2	Pos3	C	1B	2B	3B	SS	OF
Alexi Amarista, SD	2B	OF		0	0	52	1	12	42

Player Profiles (Alphabetical by Position)

Catcher

[Rod Barajas](#), ARI

C

Rod Barajas endured his worst campaign in years last season and is clearly on the downside of his career at age 37. He batted just .206 with 11 home runs and 31 RBI in 104 games as he lost playing time to backup Michael McKenry. His .343 slugging percentage was more than 60 points below his career mark and his RBI total was his lowest since 2007. The Pirates declined his option for 2013 but Barajas will likely land somewhere and split time behind the plate. Since he still has decent pop for a backstop, plan on targeting Barajas in single-league formats on Draft Day.

Year	AB	R	H	HR	RBI	SB	BA	FPTS
2013 (proj)	155	16	34	7	21	0	0.219	92.5
2012	321	29	66	11	31	0	0.206	171.5
2011	305	29	70	16	47	0	0.230	197.5

[Rob Brantly](#), MIA

C

When the Marlins acquired Rob Brantly as part of their haul for sending Anibal Sanchez and Omar Infante to the Tigers last July, it appeared the young catcher was probably a year or two away from making a contribution at the big league level. After floundering at Detroit's Triple-A affiliate in Toledo, Ohio, Brantly made a positive impression at Triple-A New Orleans, prompting the Marlins to call him up and hand him the bulk of the playing time behind the plate. He continued his hot-hitting ways after arriving in Miami, putting up a .290/.372/.460 slash line over 113 plate appearances. Brantly flashed the doubles power and solid contact skills he had shown in the minors, but he also showed a penchant for drawing walks that was at odds with his prior track record. As a left-handed batter, Brantly should get the bulk of the at-bats in a platoon with Jeff Mathis next season and if he can sustain the productivity he showed late last season over a full year, he will be worth owning in standard mixed leagues. However, it remains to be seen if he can maintain his patient approach at the plate, so owners should look to Brantly as more of an option for deeper mixed leagues and NL-only formats.

Year	AB	R	H	HR	RBI	SB	BA	FPTS
2013 (proj)	340	42	93	6	38	0	0.274	217
2012	100	14	29	3	8	1	0.290	74

[John Buck](#), NYM

C

John Buck parlayed his 2010 career year with the Blue Jays into a three-year deal with the Marlins prior to the 2011 season, but just two years later, the Fish are a mere speck in Buck's rear-view mirror. By late August of last season, Buck had lost his starting catcher's role, as he fell into the lesser side of a platoon arrangement with rookie Rob Brantly. After hitting .192 with 12 homers in his second year with the Marlins, Buck was shipped back to the Blue Jays as part of a 12-player megadeal. Just over a month later, Buck was dealt again, this time to the Mets in the trade that sent R.A. Dickey to Toronto. With New York, Buck will find himself back in a starting role, but that won't make him a viable option in mixed leagues. Though he has some home run power and draws walks, Buck won't produce enough runs or a high enough batting average to merit a roster spot outside of NL-only leagues.

Year	AB	R	H	HR	RBI	SB	BA	FPTS
2013 (proj)	280	25	64	10	35	0	0.229	154
2012	343	29	66	12	41	0	0.192	189.5
2011	466	41	106	16	57	0	0.227	271.5

[Wellington Castillo](#), CHC

C

Wellington Castillo split time behind the plate with Steve Clevenger last season after Geovany Soto was traded and had his most productive campaign in the majors yet. He saw action in 52 games and batted .265 with five home runs and 22 RBI, which were both careers highs. His .418 slugging percentage shows some budding power and the 25-year-old is expected to compete with Clevenger and Dioner Navarro for playing time during the spring. Castillo has the potential to put up some decent power numbers with a full season of at-bats, so keep an eye on the position battle during spring training. Castillo is worth targeting in NL-only formats on Draft Day but don't be surprised if he becomes more valuable in Fantasy if his role increases.

Year	AB	R	H	HR	RBI	SB	BA	FPTS

2011	13	0	2	0	0	0	0.154	0

[Steve Clevenger](#), CHC

C

Steve Clevenger saw his most extensive playing time in the majors last season, but could not do much with the bat. Mainly seeing time behind the plate, he batted just .201 with one home run and 16 RBI in 199 at-bats. Catcher is not his natural position but he appeared to adjust well and has become a favorite of manager Dale Sveum for his style of play. Clevenger will compete for playing time with Wellington Castillo and Dioner Navarro during the spring so keep an eye on how everything plays out. Unless he becomes the everyday catcher in Chicago, however, leave the 26-year-old for the waiver wire.

2011	4	1	1	0	0	0	0.250	4

[A.J. Ellis](#), LAD

C

A.J. Ellis was a surprisingly productive Fantasy option -- particularly in Head-to-Head leagues -- at the beginning of 2013. Long an on-base specialist in the minors, the 31-year-old's high walk rate appeared to translate in his first year of regular major-league duty, leading to a .413 on-base percentage in his first 62 games. But over his final 71 games, his walks were cut in half, leading to a .335 on-base percentage that, when combined with a .254 batting average and .406 slugging percentage, wasn't particularly useful in Fantasy. So was it just a slump? Maybe. But Ellis was a minor-leaguer into his 30s for a reason. Maybe once major-league pitchers figured out his strike zone, he became an easy target for their superior stuff. In leagues that reward on-base percentage, Ellis is still an intriguing Fantasy option, but given his lack of pedigree, the way he tailed off in the second half last year makes him a risky investment in standard Fantasy formats.

Year	AB	R	H	HR	RBI	SB	BA	FPTS

2011	85	8	23	2	11	0	0.271	59

[Tim Federowicz](#), LAD

C

At this time a year ago, Tim Federowicz, who the Dodgers acquired in a three-team deal that sent Trayvon Robinson to the Mariners in 2011, looked like he might have the inside track on the starting job in Los Angeles. But longtime minor-leaguer A.J. Ellis filled the role admirably, providing a .373 on-base percentage that ranked sixth among full-time catchers. If, however, that performance proves to be too good to be true for the soon-to-be 32-year-old, as his second-half numbers suggest, Federowicz is a logical candidate to replace him. The 25-year-old offers a similar skill set -- a good batting eye with enough pop to hit double-digit home runs -- and, therefore, would be better suited for the Dodgers' star-studded lineup than whatever retread they could find in free agency. He doesn't have a ton of upside (and, seeing the way the Dodgers spend these days, they might be inclined to replace him even if he performs well), but if he gets a shot at regular at-bats in that lineup, he could surprise in Fantasy. Because he's the likely to be the backup to Ellis even if he doesn't replace him outright, Federowicz is worth drafting in NL-only leagues that require the use of two catchers.

Year	AB	R	H	HR	RBI	SB	BA	FPTS
2013 (proj)	150	18	37	3	17	0	0.247	89
2012	3	0	1	0	0	0	0.333	1
2011	13	0	2	0	1	0	0.154	4

[Yasmani Grandal](#), SD

C

The stage was set for Yasmani Grandal to have a grand sophomore showing in 2013. He arrived midway through 2012 with better numbers than anyone could have asked for from a rookie catcher playing half his games at PETCO Park, demonstrating better-than-expected power and a batting eye beyond his years. His .394 on-base percentage ranked fifth among catchers with at least 150 at-bats. If he could sustain that pace over a full campaign, he'd rank up there with Joe Mauer and Buster Posey. He also stood to benefit from the Padres' decision to bring in the fences at PETCO this offseason. Yup, that stage was set all right. Too bad Grandal had to blow it by getting busted for PED use in early November. Now he'll have to sit out the first 50 games of 2013, which means his starting point won't be that much earlier than it was in 2012. Plus, Fantasy owners can't help but wonder if the PED use influenced his numbers. Granted, he was a top prospect and all, but him being so productive so early on seemed a little too good to be true. Once you get beyond the top 15 catchers or so, Grandal is probably worth the gamble in leagues that require the use of two catchers. But in one-catcher leagues where you'd have to stash him on your bench for two months, take a pass.

2011	0	0	0	0	0	0	0.000	0

[Ryan Hanigan](#), CIN

C

Ryan Hanigan had a delightfully unexpected 2012 campaign for the Reds, playing in 137 games and posting a .274 average with two home runs and 14 doubles. It was nothing earth-shattering, but Hanigan did provide an alternative to the 20 home run, .222 average breed of catchers for NL-only owners looking to not kill their batting average. At some point, Devin Mesoraco will take over as catcher, but Hanigan provides a nice batting average as a second catcher in NL-only leagues until that time comes.

Year	AB	R	H	HR	RBI	SB	BA	FPTS
2013 (proj)	262	26	72	4	32	0	0.275	174
2012	317	25	87	2	24	0	0.274	184.5
2011	266	27	71	6	31	0	0.267	174

[Ramon Hernandez](#), LAD

C

Ramon Hernandez began the 2012 season as the Rockies' starting catcher and mentor to young Wilin Rosario, but it took just over a month for Rosario to wrest the starting job from the 36-year-old veteran. Hernandez returns to the Rockies in 2013, and once again, he will sit behind Rosario on the depth chart. Hernandez's 52 games played last season -- his lowest total since his 1999 rookie year -- resulted from injuries as well from the challenge presented by Rosario. He didn't just lose playing time last year; Hernandez lost 65 points off his batting average, hitting only .217. When he did play, he struck out at a rate above his career norm and also walked less, so Hernandez is starting to show signs of serious decline. With Rosario firmly entrenched in a starting role, Hernandez is no longer a viable option in mixed leagues, and even in NL-only leagues, he is no more than a late-round option.

2012	184	16	40	5	28	0	0.217	100
2011	298	28	84	12	36	0	0.282	204.5

[Nick Hundley](#), SD

C

Heading into 2012, Nick Hundley seemed like he had a hold on the Padres' starting catcher job. No, he wasn't an All-Star-caliber player, but he was coming off a career-high .824 OPS and looked like he'd be able to hold off newly acquired prospect Yasmani Grandal for at least a year or so. But then, when the games actually started, he was nothing short of disastrous. The Padres stuck it out with him for three months before turning the page to Grandal, who was hitting .323 between two minor-league stops, and the rest was history. Or so it seemed. With the news this offseason that Grandal will miss the first 50 games of 2013 for PED use, Hundley gets the second chance of a lifetime. Granted,

Grandal was so successful as a rookie that Hundley doesn't have a legitimate chance of winning the job back from him, but if he can get his batting average back up in the .250 range during those first two months Grandal is out, he has enough pop to factor in leagues that require the use of two catchers. Particularly in NL-only formats, Hundley is worth a look on Draft Day.

Year	AB	R	H	HR	RBI	SB	BA	FPTS

2011	281	34	81	9	29	1	0.288	187

[Erik Kratz](#), PHI

C

With Carlos Ruiz serving a PED suspension for the season's first 25 games, a Fantasy owner could fill the hole with Ruiz' direct replacement, Erik Kratz, who hit .248 with nine home runs in 141 at-bats for the Phillies last season. Kratz, 32, has shown flashes of power in the minors, with four seasons of double-digit home runs since 2007, despite only getting more than 353 at-bats once. And he won't kill you with his average, which could float around .250. As a cheap source of power who will play a lot over the season's first month, Kratz can be rostered in NL-only leagues, with the understanding that he's waiver wire material come May.

Year	AB	R	H	HR	RBI	SB	BA	FPTS

2012	141	14	35	9	26	0	0.248	107
2011	6	0	2	0	0	0	0.333	2.5

[Jonathan Lucroy](#), MIL

C

Brewers catcher Jonathan Lucroy was in the midst of what appeared to be a breakout season, when late last May, he was the recipient of a bad break. Lucroy sustained a broken bone in his right hand when a piece of luggage fell on it in his hotel room, and the mishap cost him nearly two months. The injury barely slowed Lucroy down, as he hit .299 with seven home runs over 53 games once he returned from the disabled list. The 26-year-old finished with a .320 batting average, 12 homers and 58 RBI over just 96 games. Lucroy is more known for his gap power, but he added some home run thump to his repertoire in 2012. He enters the coming season with more questions than just whether he can sustain his power production. A .300-plus average was a pleasant surprise for Lucroy, as he had not for that high of an average since playing in Class A. Lucroy was able to achieve much of his progress by reducing his strikeouts, but a .305 average on grounders suggests that he had more than a few hits find the holes in the infield. One might be tempted to draft Lucroy as a top 10 catcher based on last season's production, but with the potential for some loss of power and batting average, he is really more of a top 15 option.

Year	AB	R	H	HR	RBI	SB	BA	FPTS
2013 (proj)	410	59	121	13	63	3	0.295	314.5
2012	316	46	101	12	58	4	0.320	277
2011	430	45	114	12	59	2	0.265	256.5

[Russell Martin](#), PIT

Russell Martin remains a matter of taste. If you like your catchers to have a lot of power, mix in a few steal, and toe the line of possibly *hurting* your batting average, then Martin is your man. He set a career high for home runs in 2012, with 21, while simultaneously managing a career-low in batting average, with .211. And as a Pirate, Martin no longer has the cozy confines of hitter-friendly Yankee Stadium (where he hit 13 home runs last year) to call home. Martin has the ability to hit for average; as an All-Star in 2007 and 2008, he hit .286 over the two-year span, but it seems that, in his 2012 contract year, he was willing to sacrifice the average for power, bringing a bunch of strikeouts (career high 95) along for the ride. He should be drafted toward the end of the middle rounds in most drafts.

Year	AB	R	H	HR	RBI	SB	BA	FPTS
2013 (proj)	410	56	102	15	46	6	0.249	286.5
2012	422	50	89	21	53	6	0.211	297.5
2011	417	57	99	18	65	8	0.237	320.5

[Jeff Mathis](#), MIA

Jeff Mathis enjoyed one of the better campaigns of his career in his first season in Toronto in 2012 after being traded from the Angels during the offseason. He saw action in 71 games and hit eight home runs with 27 RBI -- his best numbers since 2008. The 29-year-old was traded again during the current offseason, this time to Miami in the blockbuster deal that sent Jose Reyes and Josh Johnson to Toronto, and could see some decent playing time with the Marlins. He will be counted on to mentor the young Rob Brantly in South Florida, but since Brantly is far from a finished production at this point, Mathis should play at least a couple times a week. Keep in mind that new Marlins manager Mike Redmond, a former catcher himself, prefers a more defensive backstop, which Mathis has been considered for much of his career. Mathis has some decent pop but plan on leaving him for NL-only formats on Draft Day.

Year	AB	R	H	HR	RBI	SB	BA	FPTS
2013 (proj)	221	21	43	5	22	2	0.195	90.5
2012	211	25	46	8	27	1	0.218	112
2011	247	18	43	3	22	1	0.174	83.5

[Brian McCann](#), ATL

Brian McCann just couldn't catch a break in 2012. Not only did he miss out on an All-Star nod for the first time in his seven full seasons, but he put up numbers befitting of Rod Barajas. The league-wide infatuation with the infield shift condemned him to a low batting average early, and just when he seemed to be getting on track in July, hitting .309 with nine homers and a 1.104 OPS during a 19-game stretch, he came down with a frayed labrum and cyst in his right shoulder. McCann's attempts to play through the injury only put him in a deeper hole, and by the end of the year, he was pretty much confined to a reserve role behind David Ross. Though he had surgery in the offseason to correct the problem, the damage proved to be worse than expected, meaning his rehabilitation will likely extend into the regular season. With free agency approaching in 2013, McCann will be plenty motivated to return to the field, but if he rushes and ends up playing at less than 100 percent, he'll run into the same problems he had last August and September. At age 29, he still has the potential to perform like an elite Fantasy catcher, but seeing as he's on the winding road of recovery right now, you wouldn't want to invest more than a middle-round pick in him.

Year	AB	R	H	HR	RBI	SB	BA	FPTS
2013 (proj)	400	46	100	17	64	3	0.250	294
2012	439	44	101	20	67	3	0.230	299
2011	466	51	126	24	71	3	0.270	357.5

[Michael McKenry](#), PIT

Michael McKenry provided the Pirates with some decent pop at the backup catcher spot in 2012 and ended up having a career campaign. He hit 12 home runs with 39 RBI and a .422 slugging percentage in 240 at-bats as he saw minimal playing time behind Rod Barajas. The 27-year-old has been a favorite of manager Clint Hurdle since arriving in Pittsburgh in 2011 and could see his

role increase heading into this season. With the Pirates giving Russell Martin a two-year deal in the offseason, however, it looks as though McKenry will continue to platoon at catcher. His power numbers extrapolate into some decent stats with a full season of at-bats, but since that is not likely to happen in 2013, leave McKenry for NL-only formats on Draft Day.

Year	AB	R	H	HR	RBI	SB	BA	FPTS
2013 (proj)	143	14	33	5	17	0	0.231	82
2012	240	25	56	12	39	0	0.233	165.5
2011	180	17	40	2	11	0	0.222	74.5

[Devin Mesoraco](#), CIN

One of Cincinnati's most anticipated prospects, Devin Mesoraco fizzled in 2012, hitting just .212 with five home runs and eight doubles in 165 at-bats. Mesoraco failed to deliver on the promise of his minor league power and what seemed to be a solid batting average, playing sparingly throughout the season, with Ryan Hanigan getting the lion's share of work behind the plate. His season hit a low point in July, when Mesoraco was suspended for bumping an umpire and then placed on the seven-day concussion DL. There's still hope for Mesoraco in 2013, but it's best to play it safe, as Hanigan is lined up to get most of the playing time again. He's best taken as a second catcher in deep NL-only leagues.

2011	50	5	9	2	6	0	0.180	27

[Yadier Molina](#), STL

Remember when Yadier Molina was that defensive-minded catcher you drafted only if you missed out on the big bats at the position and didn't want to settle for someone who'd destroy your batting average in the later rounds? Safe to say he's undergone a transformation of sorts, trailing only Buster Posey in OPS among catchers with at least 400 at-bats last year. And Posey won NL MVP, you know. So was it legitimate? Well, really all that changed for Molina was the increase in power, and it happened in his late 20s, when such increases are common. What should also ease your mind is that it didn't happen all at once. He took an intermediate step in 2011, nearly doubling his previous career high in home runs, before taking a great, big, Papa Bear step last year. His contact rate has always been abnormally high, so no reason to doubt his batting average. If in a worst-case scenario you're getting a .300 hitter who bats in the middle of a potent lineup, then you have to agree Molina is one of the safest catchers in Fantasy. Where to draft him is a matter of debate, but once Posey goes off the board, he's as viable as anybody.

Year	AB	R	H	HR	RBI	SB	BA	FPTS
2013 (proj)	510	59	150	18	72	10	0.294	395

2011	475	55	145	14	65	4	0.305	356

[Miguel Montero](#), ARI

Miguel Montero has hit 33 home runs over his last two seasons. And he's one of the rare catchers who can flirt with 20 home runs while keeping a nice batting average (.284 over the last two years). While Montero had a nice season overall in 2012, there were a couple disturbing trends. For the first time in his career, Montero had more than 100 strikeouts. And he didn't just eke across the century mark -- he had 130 whiffs. He also lost 11 doubles from his 2011 total (from 36 to 25). But his OPS went up as he almost doubled his walks and he played in 141 games. Montero isn't a flashy 30-home run hitter, but he spreads enough goodness around to be a top Fantasy contributor at catcher. He should be taken as a No. 1 catcher, probably in the middle to late rounds.

2011	493	65	139	18	86	1	0.282	389.5

[Miguel Olivo, MIA](#) C

Miguel Olivo continued to show some decent pop from behind the plate last season but did not see a ton of playing time in Seattle and had his worst campaign in years. He batted .222 with 12 home runs and 29 RBI in 315 at-bats while John Jaso and Jesus Montero saw most of the starts behind the plate. Olivo had his option declined by the Mariners and has not seen a ton of interest on the free-agent market this offseason. The 34-year-old has averaged 16 home runs with 53 RBI and a .427 slugging percentage over the last seven seasons but it looks as though his days of being a reliable option in Fantasy are done. Unless Olivo somehow earns a starting gig in 2013, plan on leaving him for deeper single-league formats on Draft Day.

2011	477	54	107	19	62	6	0.224	259

[Buster Posey, SF](#) 1B/C

Buster Posey's 2012 season began with a great deal of uncertainty, as he had not played since the previous May due to a gruesome injury to his leg and ankle. The grisly aftermath of the violent home plate collision between Posey and Marlins outfielder Scott Cousins had faded by November, as Posey had collected the National League MVP award, a batting title and a World Series championship. Posey had no problem rediscovering the home run power he established in his 2010 rookie season, as he mashed 24 homers in 2012. He didn't merely keep pace with his rookie level of performance, as he saw huge increases in his doubles and walk rates. The improvement could be sustainable as Posey became a more productive line drive hitter. According to FanGraphs, Posey hit 19 line drive doubles in 148 games in 2012 as compared to five in 108 games in 2010. With the proven ability to hit for power and average and a likely spot in the middle of the Giants' order, Posey is arguably the most valuable catcher in Fantasy, and he is sure to be the first backstop drafted in many leagues.

2011	162	17	46	4	21	3	0.284	114

[Wilson Ramos, WAS](#) C

Wilson Ramos returned from his harrowing offseason experience of being kidnapped in Venezuela to assume the starting catcher's role with the Nationals last spring. Ramos did not get to enjoy his return to work for long, as he tore his ACL in a game in mid-May. As a result of two surgeries on his right knee, Ramos missed the remainder of the season, but he is expected to be ready for spring training. Manager Davey Johnson wants to ease Ramos back into his job, so Kurt Suzuki will begin the year as the team's starting catcher while Ramos will fill a backup role. If Ramos can prove he is healthy enough to field his position on a regular basis -- and if he performs well -- he could still earn a larger share of playing time. Because Ramos can hit for power, he could make a solid contribution in standard mixed league, should he earn at least an even share of starts. That makes him worth drafting in the later rounds in standard mixed leagues.

Year	AB	R	H	HR	RBI	SB	BA	FPTS

2011	389	48	104	15	52	0	0.267	273

[Wilin Rosario, COL](#) C

Wilin Rosario started the 2012 season as the lesser half of a catching timeshare with veteran Ramon Hernandez, but it only took about a month and a half for him to force his way into a clear starting role. Just as he had done in parts of two seasons in Double-A, Rosario hit home runs at a torrid pace off of big league pitchers, even though he had been skipped over Triple-A. In 117 games, the rookie connected for 28 homers, though 18 of those came in the thin air of Coors Field. Rosario may rely on his home park to boost his power

stats, but he will be back as the Rockies' backstop in 2013, so there is no reason to expect his home run production to drop off. Unlike his predecessor, Chris Iannetta, Rosario is not as reliant on a high flyball rate to post big power numbers, so he can be counted on to hit for a decent batting average. With ample playing time in store, Rosario is a safe bet to be drafted as a top 10 catcher in mixed leagues.

Year	AB	R	H	HR	RBI	SB	BA	FPTS

2011	54	6	11	3	8	0	0.204	31

[Carlos Ruiz, PHI](#) C

Despite missing 38 late-season games with plantar fasciitis, Carlos Ruiz had a career year across the board in 2012, setting highs in home runs (16), RBI (68), doubles (32), batting average (.325), and steals (four). And then, in November, Ruiz got hit with a 25-game PED suspension, and the world let out a collective "a-ha!" To Ruiz' credit, this was for amphetamines, not steroids, so it was more of a focus thing than muscle-building. And since we've seen what he is capable of doing while missing 38 games, not having him for 25 doesn't seem like such a terrible prospect. Ruiz' numbers were essentially even at home and on the road, although he did have a much higher average in the first half of the season. But his peripherals didn't change much, outside of his HR/FB rate spiking (via FanGraphs). Based on his career prior to 2012 and the revelation that he tested positive for PEDs, Ruiz is a good bet to dip back down in most categories. But we can't fully ignore last season, so the dip may not be that dramatic. It's not crazy to expect Ruiz to hit double-digits in home runs again, but he will end up much closer to 10 home runs than 20. His regression and suspension should combine to make him a late-round selection in most leagues.

2011	410	49	116	6	40	1	0.283	282

[Kurt Suzuki, WAS](#) C

Though Kurt Suzuki has never excelled in any particular Fantasy category, there was a time when he was a decent mixed league option. Because Suzuki didn't miss many starts for the A's and didn't miss on many attempts at contact, he would be among the top catchers in base hits. Over the last three seasons, Suzuki still made contact at a good rate, but increasingly he would pop the ball up for easy outs. The steady drop in batting average finally led to an erosion of his playing time last season, and by early August, Suzuki had been ticketed out of Oakland. Traded to make room for prospect Derek Norris, Suzuki found regular playing time again with the Nationals, and he also rediscovered a higher batting average. Having reduced his popup and strikeout rates, Suzuki hit .267 in 43 games with Washington. Though it's hard to judge from a two-month sample, perhaps Suzuki's resurgence was for real. However, playing time is just as important to Suzuki's value and he will be splitting time behind the plate with Wilson Ramos. That makes Suzuki no more than a late-round option for owners in standard mixed leagues.

[Travis d'Arnaud](#), NYM

C

You know how every June or so, that one prospect arrives with such a bang that the owner who had the foresight to stash him at the beginning of the season almost has an unfair advantage the rest of the way? For most of 2012, Travis d'Arnaud looked like he'd be that guy ... well, the one who came after Mike Trout and Bryce Harper anyway. He was hitting over .300 with an OPS over .900 -- achieving those marks for a second straight step up the organizational ladder -- and his 16 home runs ranked third in the Pacific Coast League. That was in June. Unfortunately, the month ended not with a promotion, but with a torn posterior cruciate ligament in his left knee, sidelining him for the rest of the season. Talk about a missed opportunity. Fortunately, the next one should be in short order with his new team, the Mets. As the prize of the R.A. Dickey deal, d'Arnaud will get an opportunity to start behind the plate at some point in 2013. The only question is whether or not it'll be on opening day. His only real competition for the job is John Buck, who has hit .213 over the last two seasons. Still, if the rebuilding Mets want to delay d'Arnaud's arbitration clock, they might send him to the minors for the first couple months. Clearly, the 24-year-old has nothing more to learn there. He's on the verge of becoming the next great catcher in Fantasy, whether in April or June. If you want to be the owner who had the foresight to stash him, you better target him late in mixed-league drafts.

First Baseman

[Yonder Alonso](#), SD

1B

When Yonder Alonso homered five times in only 88 at-bats during a late-season trial with the Reds, he looked ready to anchor the middle of just about any lineup in baseball. Unfortunately, the presence of Joey Votto forced the Reds to make it someone else's lineup, and that lineup just so happened to line up in San Diego, where home runs go to die. It was a stark contrast from the bandbox of Great American Ballpark, and it showed in his numbers. In more than six times the at-bats he had in 2012, Alonso failed to hit even twice as many homers, his slugging percentage plummeting from .545 to .393. What's curious is that even though six of his nine homers came on the road, his slugging percentage was actually lower there than at home, which suggests he may have altered his swing to compensate for the cavernous PETCO Park. The one silver lining for Alonso is that the Padres opted to move in the fences in the offseason, so if he's able to recapture what he had in Cincinnati, he has a chance to get his career back on track. As he nears his 26th birthday, though, he won't get infinite chances. Until you see sure signs of a turnaround, you're probably better off leaving Alonso for NL-only leagues.

Year	AB	R	H	HR	RBI	SB	BA	FPTS
2013 (proj)	555	64	161	16	80	4	0.290	423.5

2011	88	9	29	5	15	0	0.330	71.5

[Brandon Belt](#), SF

1B

Unlike in his 2011 rookie season, Brandon Belt got a genuine chance at regular playing time last season, but he didn't produce home runs like he had as a minor league prospect. Nonetheless, there were clear signs of progress for the Giants' primary first baseman. Belt struck out far less often and drew walks at a higher rate. He also raised his batting average 50 points as he rediscovered the line drive power he displayed in the minors. The reappearance of Belt's doubles power -- he produced 27 doubles in 411 at-bats -- was a boon to owners in points leagues. After hitting nine home runs in an abbreviated rookie season, Belt's output of seven homers last year had to be a letdown. He will be just shy of his 25th birthday on opening day, so Belt is a strong bet to improve, as he could add home run power to the gains he achieved last season. Owners in standard mixed leagues should pursue a safer option to man first base, but because of his untapped potential, taking Belt in the later rounds would be an advisable gamble.

[Matt Carpenter](#), STL

1B/2B/3B/OF

Nobody expected much from Matt Carpenter when he made the Cardinals out of spring training last year. Overshadowed by Matt Adams and Zack Cox in the minor-league system, he wasn't as much a building block for the future as a 26-year-old who had nowhere else to go. But beginning the first week of the season, when he filled in for an injured Lance Berkman, Carpenter showed the Cardinals he had a bat worth keeping him in the lineup. And they found creative ways to get it there, letting him spell an injury-prone David Freese or fill in for a banged-up Carlos Beltran from time to time. They even gave him a couple starts at second base and liked his performance there enough to give him an extended look at the position this spring. Of course, top prospect Kolten Wong will eventually claim second base, but among the candidates currently deemed major league-ready, Carpenter certainly offers the most offensively. With a good on-base percentage and doubles and triples pop, he would have genuine mixed-league appeal if he won a starting job. It's too much of a long shot for you to target him outside of NL-only formats, though.

2011	15	0	1	0	0	0	0.067	4

[Tyler Colvin](#), COL

1B/OF

Tyler Colvin surprised many Fantasy owners with his 20-homer rookie season in 2010, but just as quickly as he earned attention, he fell into obscurity just a year

later. Coming back from a collapse lung, he hit just .150 in 2011, so expectations were low when Colvin came over to the Rockies last offseason. He took full advantage of Coors Field, hitting 11 of his 18 home runs there and batting .338 (as opposed to .244 on the road). Colvin logged 136 games, making at least 30 appearances at first base, center field and right field. He should get a healthy amount of playing time at those positions again in 2013, so even without an everyday job, Colvin should produce enough to be worth a pick in deeper mixed leagues.

2012	420	62	122	18	72	7	0.290	332.5
2011	206	17	31	6	20	0	0.150	85

[Allen Craig](#), STL

1B/OF

Chances are Allen Craig wasn't drafted in your Fantasy league last year. At the time, he was recovering from offseason knee surgery and didn't have an everyday job waiting for him. When he did finally return as an injury replacement for Lance Berkman on May 1, he wound up hitting .404 (19 for 47) with five homers in his first 12 games. With that, his playing time was no longer in question. Perhaps it shouldn't have been in the first place. At every other stage of his professional career -- be it as a minor-leaguer, a part-timer during the 2011 season or an injury replacement during the 2011 postseason -- Craig proved capable of hitting .300 with a .900 OPS. So why wouldn't it translate to full-time duty? Now that he's proven it does, having maintained a batting average right around .300 for the final five months of 2012, a starting job -- whether at first base or the outfield -- is Craig's for the foreseeable future. He may not have much room to improve at age 28, but considering he averaged more Head-to-Head points per game than high-profile teammate Matt Holliday last year, he's worthy of an early round pick just as he is.

Year	AB	R	H	HR	RBI	SB	BA	FPTS

2011	200	33	63	11	40	5	0.315	190

[Michael Cuddyer](#), COL

1B/OF

After struggling to hit for power in his two seasons at Target Field, Michael Cuddyer left the Twins for a three-year, \$31.5 million deal with the Rockies. Coors Field went a long way towards helping Cuddyer to revive his career, as he slugged .489 for his highest mark since playing his home games in the Metrodome. He certainly enjoyed an assist from his home park, as his slugging percentage was .515 at home. Unfortunately, those stats were compiled through just 101 games, as Cuddyer missed almost all of the season's final two months due to an oblique injury. He is set to return for spring training, and as long as he remains with Colorado, he will have value for owners in standard mixed leagues. Even with the potential for 25 to 30 homers, Cuddyer remains a late-round option, as he provides only modest help with batting average and stolen bases.

Year	AB	R	H	HR	RBI	SB	BA	FPTS
2013 (proj)	510	78	133	21	80	6	0.261	412

2011	529	70	150	20	70	11	0.284	408.5

Ike Davis, NYM**1B**

Ike Davis had his 2011 campaign cut short due to an ankle injury but proved last season that he can be a big-time run producer for the Mets. Despite batting just .201 in the first half, he hit 12 home runs with 49 RBI and turned things around in a big way down the stretch. Davis would post 20 homers with a .542 slugging percentage over his final 75 games to finish the year with 32 long balls and 90 RBI. While there were rumors he could be on the move in the offseason, Davis enters 2013 as the starting first baseman in New York and should only benefit from the fences being moved in at Citi Field. His career .235 average and .415 slugging percentage at home should go up and the 25-year-old has a legitimate chance at driving in 100 runs for the first time. Davis seems primed for a breakout campaign so consider him solid option in most Fantasy formats on Draft Day, worthy of being selected in the middle rounds.

Year	AB	R	H	HR	RBI	SB	BA	FPTS
2013 (proj)	510	74	138	29	90	0	0.271	426
2012	519	66	118	32	90	0	0.227	385.5
2011	129	20	39	7	25	0	0.302	117.5

Greg Dobbs, MIA**1B/3B/OF**

Aside from Hanley Ramirez's half-season at the hot corner, the Marlins have had problems finding a regular third baseman over the last two years, but Greg Dobbs has received 114 starts at the position over that span. The Marlins signed Placido Polanco this offseason, so starts will probably be harder to come by for Dobbs in 2013. Even as a starter, Dobbs has limited appeal for Fantasy, as he has lost some of the home run thump he showed when he was with the Phillies. Dobbs still has gap power, so he can produce a decent batting average, but that's about all that Fantasy owners can count on. Only consider drafting Dobbs in deeper NL-only leagues.

Year	AB	R	H	HR	RBI	SB	BA	FPTS
2013 (proj)	298	26	79	6	34	2	0.265	163
2012	319	26	91	5	39	4	0.285	183.5
2011	411	38	113	8	49	0	0.275	228.5

Todd Frazier, CIN**1B/3B**

Todd Frazier is going to enter 2013 with eligibility at both first and third base. And he'll be a viable candidate at both after putting up a .273 average with 19 home runs and 26 doubles in just 422 at-bats last season. Frazier benefited from timely injuries to Scott Rolen and Joey Votto in 2012, allowing him to show off his talents, which would have otherwise been buried on the bench. Heading into 2013, Frazier is penciled in as the starting third baseman, but he also played seven games in the outfield last year, so there exist some scenarios -- mostly among Reds fans -- where Frazier starts in place of free agent Ryan Ludwick. Either way, outfield eligibility will only increase his value. Frazier should be a mid-to-late round selection in most drafts, able to help in average and power categories in 2013.

2011	112	17	26	6	15	1	0.232	78.5

Freddie Freeman, ATL**1B**

In a season full of ups and downs, Freddie Freeman somehow ended up right back where he started in 2012, with an OPS nearly identical to the one he put together as a rookie in 2011. While the lack of progression might be discouraging to some, keep in mind Freeman achieved that OPS despite losing nearly 25 points on his batting average. He made up the difference with a higher walk rate and improved power, which are the more important measurements for a budding middle-of-the-order hitter. Granted, you'd like to see a higher batting average from him, but you also have to account for that .193 mark he put up during a 29-game period in May and June when he was battling blurred vision and a bruised index finger. The bottom line is Freeman did make progress in 2012, even if it didn't show up in the OPS. It may have been subtle, but he's only 23. The big jump likely won't come until he's 25 or 26. Where he is now, he's already a top-12 first baseman in Fantasy, and continued development (not to mention improved health) could easily put him in the top 10. Give him a look after the Billy Butler and Mark Teixeira types go off the board.

2011	571	67	161	21	76	4	0.282	391

Paul Goldschmidt, ARI**1B**

Quick question: who led all first basemen in steals in 2012? Answer: Paul Goldschmidt with 18. In 315 minor league games over three years, Goldschmidt had 17 total steals. Expected to hit for power and average, he returned some unexpected value on the basepaths as well, but only after a slow start. After a sad little April that saw him hit just .193 in 18 games, Goldschmidt exploded in May and June, hitting 10 home runs and driving in 27 runs. In June alone, he had a 1.147 OPS. Goldschmidt finished the season with a .286 average and 20 home runs over 514 at-bats. And he stole 12 of his 18 bases over the last three months of the season. You want Goldschmidt for the 25-year-old's still-developing power -- the speed is just a nice little door prize. He should be taken in most drafts in the middle rounds.

2011	156	28	39	8	26	4	0.250	129.5

Adrian Gonzalez, LAD**1B**

If Adrian Gonzalez's first season in Boston was a disappointment -- and by some of the more optimistic projections, it was -- his second was an abject disaster. He couldn't get his power stroke going, homering just twice in April, May and June. In 2011, he had an excuse for hitting only 27 homers. He had undergone shoulder surgery in the offseason. But this? This didn't make any sense. With his batting average languishing in the .260 range for most of that stretch, he's one of the biggest reasons why the Red Sox fell out of the race. And once they fell out of the race, he had to go, landing once again in the NL West, only this time with the Dodgers. Back on familiar turf, Gonzalez was at least steady with the batting average even if his power didn't improve. On the surface, the jump from Fenway Park to Dodger Stadium wasn't the greatest thing for his Fantasy value, but he did have success at PETCO Park all those years. And though the still-unexplained loss of power is troubling, his second half (in which he hit .317 with 12 homers and an .878 OPS) was significantly better than his first. Since he's no longer a lock for 30 homers, Gonzalez clearly isn't a first-round pick anymore, but he's still a good enough hitter to rank among the top six or seven first basemen.

Alex Gonzalez, MIL**1B/3B/SS**

Alex Gonzalez has been inconsistent in recent years, but he started off the 2012 season as if it was going to be one of his better years. One month in from opening day, Gonzalez had a .259/.326/.457 slash line that would have put him on pace for one of his best seasons, but a torn ACL in his right knee put him out of commission for the rest of the year. For awhile, the Brewers got by with journeymen at shortstop, but they acquired prospect Jean Segura from the Angels in late July, and he was given a starting role within days of arriving. Gonzalez, now a free agent, could return to the Brewers, but if he did, he would likely be Segura's backup. Should he sign on as some team's starting shortstop, he showed early last season that he still has some pop in his bat. He has not been one to hit for average or produce runs consistently, so at best, Gonzalez is an option for owners in league-specific formats.

Year	AB	R	H	HR	RBI	SB	BA	FPTS

2011	564	59	136	15	56	2	0.241	289

[Corey Hart](#), MIL

1B/OF

Corey Hart moved to a new position in 2012, but at the plate, very little had changed from the previous two seasons. Mat Gamel tore the ACL in his right knee one month into the season, and that necessitated Hart's move from the outfield to first base. He responded by posting his second 30-homer season and tying a career high with 91 runs scored, and he finished among the top 10 first basemen in standard Rotisserie and Head-to-Head formats. Aside from a slight uptick in strikeouts and a corresponding dip in batting average, Hart has been a beacon of consistency since 2010, and at age 31, he could keep this pace up for at least another year or two. Though he will remain at first base, Hart got more than enough playing time in at right field to be outfield-eligible for 2013. That will help his value a little, but because he may need knee surgery and could miss up to six weeks of the season, wait until the middle rounds of standard mixed league drafts to take Hart.

Year	AB	R	H	HR	RBI	SB	BA	FPTS

2011	492	80	140	26	63	7	0.285	400

[Todd Helton](#), COL

1B

Todd Helton has missed plenty of time in recent seasons due to health issues, but his 69 games played in 2012 was his lowest total since his first year in the majors back in 1997. He was plagued by a hip injury, and when he finally had surgery in August, his season came to an end. He also underwent a minor arthroscopic procedure on his left knee this offseason, but Helton still plans on being ready for spring training and his 17th season with the Rockies. The days of Helton being a sure-fire .300 hitter are long gone, and he is even further removed from being a power threat. Add in his perennial health issues, and owners have little reason to pursue Helton as anything more than a low-end first base option in NL-only leagues.

2011	421	59	127	14	69	0	0.302	349.5

[Ryan Howard](#), PHI

1B

Ryan Howard gets a pass for his 2012 half-season. Returning from an Achilles injury, Howard had to shake off rust and continue to play his way back into a rhythm as the mostly dead Phillies made a late-season push at an improbable wild card berth. And then he broke his toe in late September and ended the season the same way he began it: on the DL. Howard hit .219 with 14 home runs over 260 at-bats in the effort. The silver lining to the season was that he displayed enough power for would-be owners to be optimistic about a fresh start in 2013. His days of hitting .300 -- or even .280 -- may be long gone, but we hedge because Howard's average has crazy fluctuations and is nearly impossible to predict. His value, however, lies in his power. A healthy Howard is a sure thing to hit 30 home runs and 40 are definitely not out of reach. With half a season to shake off rust, as well as a full offseason to fully heal and distance himself from the Achilles injury, Howard has set himself up to return to his All-Star ways in 2013. He should be off the board by the middle rounds of most drafts.

2011	557	81	141	33	116	1	0.253	467

[Chris Johnson](#), ATL

1B/3B

Chris Johnson played 44 games with the Diamondbacks after a July trade and immediately began hammering the ball. His power streak eventually died down, but he finished his 147 at-bat stint with Arizona sporting a .286 average with seven home runs and 35 RBI. After being included in the January deal that sent Justin Upton to Atlanta, Johnson currently projects as the starting third baseman for the Braves -- the heir apparent to Chipper Jones -- and, while he isn't the most exciting player in Fantasy, he does have the ability to hit for a nice average (around .270). Given regular at-bats, Johnson could also hit 15-18 home runs. Consider him the poor man's Todd Frazier or Will Middlebrooks. Decent

average, decent power, but not enough in either category to have much value outside of NL-only leagues.

Year	AB	R	H	HR	RBI	SB	BA	FPTS

2011	378	32	95	7	42	2	0.251	193.5

[Garrett Jones](#), PIT

1B/OF

Garrett Jones had a bounce-back campaign for the Pirates a year ago thanks to a strong finish. He hit 15 home runs with 49 RBI and a solid .523 slugging percentage in 74 games after the All-Star break and finished the year with a career-high 27 homers and 86 RBI. His on-base percentage dipped slightly from his down 2011 campaign but his jump in slugging percentage from .433 to .516 made a huge difference in his Fantasy value. The 31-year-old has been too inconsistent to trust in the majority of formats so far in his career, but the potential for 30 homers means he remains an intriguing option. Jones stands to see the majority of the playing time at first base in 2013 and is worth targeting in mixed leagues on Draft Day.

2011	423	51	103	16	58	6	0.243	299

[Casey Kotchman](#), MIA

1B

First baseman Casey Kotchman, who spent 2012 with Cleveland, kind of flubbed the one thing he had going for him in Fantasy in 2012 -- his average. You don't draft Kotchman for his power (he's lucky to hit 10 home runs), speed (his career high in steals? Three) or even doubles (he's gone over 25 just twice in a nine-year career). But he hit .306 in 2011 and put up a .273 average over his previous five seasons. A free agent heading into 2013, Kotchman, who has managed 400 or more at-bats in five of the last six seasons, should be able to find a role with some team, but it's likely not as a starter. Even if he does find a regular job, Kotchman's a light-hitting first baseman, and with the current crop at that position his value is low-end AL-only at best.

2011	500	44	153	10	48	2	0.306	332

[Adam LaRoche](#), WAS

1B

After a 2011 season marred by shoulder surgery, Adam LaRoche entered last season as almost a forgotten man in Fantasy. It wasn't just poor 2011 stats or four-plus months of missed time that led to owners' indifference over LaRoche. Several years of mediocre power numbers led owners to view him as a late-round option. LaRoche rewarded those owners who did draft him with his best season in six years, as he hit 33 home runs with 100 RBI to go along with a typical .271 batting average. He actually needed a red-hot September, in which he banged 10 homers and eight doubles, to finish with such an impressive stat line, so for most of the year, LaRoche was not a radically different player than he had been for the bulk of the previous four seasons. Though he was a top 10 first baseman in standard Rotisserie and Head-to-Head formats in 2012, owners can afford to wait until the middle-to-late rounds to pursue him this spring.

2011	151	15	26	3	15	1	0.172	77.5

Brent Lillibridge, CHC**1B/2B/OF/SS**

Brent Lillibridge played for three teams in 2012, hitting .250 with three home runs and 13 steals in 190 at-bats. While he shouldn't be a draft pick this season, it's worth keeping track of his situation, as Lillibridge has two straight seasons of 10 or more steals despite not cracking 200 at-bats either year. For a single-league team in need of a band-aid because of injury or demotion, Lillibridge is at least a decent source of speed as a short-term plug-in off the waiver wire.

Year	AB	R	H	HR	RBI	SB	BA	FPTS
2013 (proj)	158	27	35	6	18	9	0.222	101
2012	190	25	37	3	10	13	0.195	90.5
2011	186	38	48	13	29	10	0.258	168

John Mayberry, PHI**1B/OF**

After showing some promise in power, speed and batting average in 267 at-bats in 2011, John Mayberry ended up being a bit of a disappointment in 2012. With 441 at-bats, Mayberry actually saw his home run numbers (15/14), average (.273/.245) and steals (8/1) numbers go down. He managed seven more doubles, but Mayberry was supposed to make a leap in 2012 that just was never realized. He showed some spark in July and August, hitting .284 with seven home runs in 141 at-bats, but finished the year with a whimper, batting .229 over his final 29 games. Despite his 2012 failures, Mayberry looked to have a starting job locked up...until Delmon Young was brought on board in late January. Now Mayberry is likely relegated to a platoon role at best, and hopes of a bounceback season are essentially shattered. He's a late gamble in NL-only leagues.

Year	AB	R	H	HR	RBI	SB	BA	FPTS

2012	441	53	108	14	46	1	0.245	255.5
2011	267	37	73	15	49	8	0.273	236.5

Logan Morrison, MIA**1B/OF**

Through the first two months of the 2012 season, Logan Morrison flailed his way to a .231 batting average with only three home runs and five doubles. Though Morrison was unable to lift his average higher, the next two months were something of a turnaround, as he clubbed eight home runs and 10 doubles. Just as he was becoming one of the more productive members of a struggling Marlins lineup, Morrison's season came to an end in late July, as he succumbed to his ongoing knee problems and ultimately had surgery in September. While Morrison should be ready to begin his fourth season in Miami on opening day, it's not clear which version will show up. As a rookie, he could be counted on for a decent batting average (.283) and high on-base percentage (.390), thanks to his gap power and patient approach. Over the last two years, Morrison has been more prone to hit flyballs, which has given him home run power at the expense of batting average. While Morrison once looked like a viable pick in standard mixed points leagues, the evaporation of his doubles power makes him a liability in those formats, while he doesn't help enough with home runs or batting average to be a force in Rotisserie. An expected move to first base from left field will further diminish his value. The safe play is to target Morrison in deeper mixed leagues and NL-only formats, while avoiding him in anything shallower.

Year	AB	R	H	HR	RBI	SB	BA	FPTS
2013 (proj)	500	66	132	25	82	1	0.264	400
2012	296	30	68	11	36	1	0.230	192
2011	462	54	114	23	72	2	0.247	354.5

Jordan Pacheco, COL**1B/3B**

Jordan Pacheco probably doesn't have an everyday position to play in the Rockies' lineup this season, but that may not stand in his way of getting regular at-bats. He did start a team-high 80 games at third base a year ago, but Pacheco could be spread around the diamond even more this season. He could see ample time at catcher, giving Wilin Rosario more rest, and he could also fill in for Todd Helton at first base if he continues to miss time due to injury. Owners shouldn't expect many homers from Pacheco, but as a contact hitter with legitimate gap power, he could exceed a .300 batting average for a second straight season. That alone could give Pacheco some mixed league value if he becomes catcher-eligible, but that's not a given, so don't look to target him outside of NL-only leagues on Draft Day.

Year	AB	R	H	HR	RBI	SB	BA	FPTS
2013 (proj)	380	45	107	4	46	5	0.282	244.5
2012	475	51	147	5	54	7	0.309	311.5
2011	84	5	24	2	14	0	0.286	49.5

Buster Posey, SF**1B/C**

Buster Posey's 2012 season began with a great deal of uncertainty, as he had not played since the previous May due to a gruesome injury to his leg and ankle. The grisly aftermath of the violent home plate collision between Posey and Marlins outfielder Scott Cousins had faded by November, as Posey had collected the National League MVP award, a batting title and a World Series championship. Posey had no problem rediscovering the home run power he established in his 2010 rookie season, as he mashed 24 homers in 2012. He didn't merely keep pace with his rookie level of performance, as he saw huge increases in his doubles and walk rates. The improvement could be sustainable as Posey became a more productive line drive hitter. According to FanGraphs, Posey hit 19 line drive doubles in 148 games in 2012 as compared to five in 108 games in 2010. With the proven ability to hit for power and average and a likely spot in the middle of the Giants' order, Posey is arguably the most valuable catcher in Fantasy, and he is sure to be the first backstop drafted in many leagues.

Year	AB	R	H	HR	RBI	SB	BA	FPTS
2013 (proj)	510	73	157	22	94	1	0.308	443.5
2012	530	78	178	24	103	1	0.336	496
2011	162	17	46	4	21	3	0.284	114

Anthony Rizzo, CHC**1B**

After a disappointing 49-game stint in the majors with the Padres in 2011, Anthony Rizzo was traded to the Cubs in the offseason and finally showed signs of becoming a reliable power hitter. He tweaked his swing and began the season at Triple-A, where he batted .342 with 23 home runs and 62 RBI in 70 games. Chicago held him back as long as they could, but finally called him up in late June. Rizzo ended up batting .285 with 15 home runs, 48 RBI and a .463 slugging percentage in 87 games for the Cubs. While he struck out 63 times in 337 at-bats, the 23-year-old has a ton of upside entering 2013. With the potential to hit 30-plus homers, plan on targeting Rizzo in most Fantasy formats as a nice power source somewhere in the middle rounds.

Year	AB	R	H	HR	RBI	SB	BA	FPTS
2013 (proj)	600	80	175	27	88	5	0.292	463
2012	337	44	96	15	48	3	0.285	251
2011	128	9	18	1	9	2	0.141	54

Gaby Sanchez, PIT**1B**

Gaby Sanchez was an All-Star for the Marlins in 2011, when he hit 19 home runs with 78 RBI, but endured the worst campaign of his career in 2012. He batted just .202 with a .306 slugging percentage in 55 games for Miami before being sent to Triple-A in early July. He was then traded to Pittsburgh at the deadline and the change of scenery did not help much. Sanchez saw just 299 at-bats in the majors last season and finished with 30 RBI and a .341 slugging percentage. The 29-year-old will likely platoon with Garrett Jones at first base for the Pirates in 2013, but based on the year he's coming off of, his appeal in Fantasy is minimal at this point. While he proved in his days with the Marlins to be a viable option in mixed leagues, plan on leaving Sanchez for NL-only formats on Draft Day.

Year	AB	R	H	HR	RBI	SB	BA	FPTS
2013 (proj)	360	44	93	11	46	3	0.258	255.5
2012	299	30	65	7	30	1	0.217	162
2011	572	72	152	19	78	3	0.266	430.5

Joey Votto, CIN**1B**

Joey Votto had a busy 2012, signing a 10-year extension with the Reds in April, then injuring his knee and missing almost two months from July to September. Still, in 111 games, Votto hit 14 home runs, took 94 walk and produced a 1.041 OPS. He hit 44 doubles in 374 at-bats. An elite option overall, Votto is probably second to only Albert Pujols in terms of Fantasy value in most leagues, especially points formats, where his walks and doubles give him more value. Votto will be gone in most drafts by the end of the first round. With 35 home run potential and an average that is essentially guaranteed to finish over .310, Votto should produce big numbers with a healthy 2013.

Year	AB	R	H	HR	RBI	SB	BA	FPTS
2013 (proj)	560	105	178	29	108	7	0.318	573.5

2011	599	101	185	29	103	8	0.309	581.5

Ty Wigginton, STL**1B/3B**

If there is such a thing as certainty in baseball, it is this: Ty Wigginton will get 300 at-bats. The Cardinals are his eighth team over a 12-year career, and Wigginton -- who enters almost every season labeled as a utility player who will see some at-bats here and there -- has gotten 300 at-bats every year but two. He has a decent .263 career average, has averaged more than 20 doubles a season since 2007 and hasn't dipped into single digits in home runs since 2005. The Cardinals have enough moving parts and injury risks to give would-be Wigginton owners hope that he will contribute in Fantasy. Eligible at first and third base in 2013, Wigginton makes for a decent late-round pick as a spare corner infielder in NL-only drafts.

Year	AB	R	H	HR	RBI	SB	BA	FPTS
2013 (proj)	432	52	105	16	55	3	0.243	282
2012	315	40	74	11	43	1	0.235	201.5
2011	401	52	97	15	47	8	0.242	282

Michael Young, PHI**1B/3B/DH**

Michael Young, the jack-of-all trades for the Rangers the last few years, will be eligible at first and third base going into 2013, despite playing nearly every infield position in 2012. And Young's move to Philly -- from one hitter's park to another -- will likely have little impact on his power numbers. Young will play third for Philadelphia and will likely stay there unless injury hits one of the all-stars at the other infield positions. While Young, 36, isn't the flashy, home-run hitting corner infielder that is the norm now in Fantasy, he does have a career .301 average, doesn't strike out a ton and points league participants can expect about 35 doubles from him every year. It's safe to consider 2012 a slump, although as he advances in age, there is some decline mixed in, as well (just not enough to justify that 2012 drop-off). One interesting misconception with Young is that he steals a lot of bases -- he hasn't hit double digits in steals since 2008 and his career high is 13. That lack of steals makes him less valuable in Rotisserie formats, although his yearly tendency to pick up middle infield eligibility does give him a tiny boost in value over similarly skilled counterparts. He should be off the board in the later rounds of mixed leagues, and will be a solid, cheap NL-only play in 2013.

Year	AB	R	H	HR	RBI	SB	BA	FPTS

2012	611	79	169	8	67	2	0.277	373
2011	631	88	213	11	106	6	0.338	513

Second Baseman

[Darwin Barney, CHC](#)

2B

Darwin Barney made strides as a second baseman last season and even took home the Gold Glove award for the first time in his career. He also picked up the pace at the plate as he posted career highs with seven home runs and 44 RBI. The 27-year-old has made some decent progress in his first three seasons in the majors but his stats do not make him the most attractive Fantasy option. Barney has slugged just .354 with a .660 OPS over the last two years and has not shown much potential for a power increase. While he can hit for average at times and plays a solid second base, leave Barney for NL-only formats on Draft Day.

Year	AB	R	H	HR	RBI	SB	BA	FPTS

2011	529	66	146	2	43	9	0.276	308.5

[Matt Carpenter, STL](#)

1B/2B/3B/OF

Nobody expected much from Matt Carpenter when he made the Cardinals out of spring training last year. Overshadowed by Matt Adams and Zack Cox in the minor-league system, he wasn't as much a building block for the future as a 26-year-old who had nowhere else to go. But beginning the first week of the season, when he filled in for an injured Lance Berkman, Carpenter showed the Cardinals he had a bat worth keeping him in the lineup. And they found creative ways to get it there, letting him spell an injury-prone David Freese or fill in for a banged-up Carlos Beltran from time to time. They even gave him a couple starts at second base and liked his performance there enough to give him an extended look at the position this spring. Of course, top prospect Kolten Wong will eventually claim second base, but among the candidates currently deemed major league-ready, Carpenter certainly offers the most offensively. With a good on-base percentage and doubles and triples pop, he would have genuine mixed-league appeal if he won a starting job. It's too much of a long shot for you to target him outside of NL-only formats, though.

Year	AB	R	H	HR	RBI	SB	BA	FPTS

2012	296	44	87	6	46	1	0.294	233.5
2011	15	0	1	0	0	0	0.067	4

[Daniel Descalso, STL](#)

2B/3B/SS

Two years into his big-league career, Daniel Descalso has become sort of the designated stand-in around the Cardinals' infield. In 2011, he was primarily the starter at third base when David Freese was sidelined with the latest of his injuries. In 2012, he was primarily the starter at second base just because the Cardinals didn't have anyone better. Come 2013, he might not have a place to stand anymore. True, heading into the year, Descalso is once again the favorite to start at second base, but with displaced on-base machine Matt Carpenter feverishly working to learn the position and top prospect Kolten Wong knocking on the door to the majors, Descalso is on the verge of a benching. Frankly, you wouldn't have it any other way in Fantasy. He provides almost nothing offensively and, at age 26, has nearly maxed out his potential. If late in an NL-only draft, you're desperate for someone who'll give you at-bats right out of the gate, Descalso is a reasonable choice, but don't expect those at-bats to last all year.

Year	AB	R	H	HR	RBI	SB	BA	FPTS
2013 (proj)	330	37	83	3	30	4	0.252	189.5
2012	374	41	85	4	26	6	0.227	197.5
2011	326	35	86	1	28	2	0.264	183.5

[Mark Ellis, LAD](#)

2B

Mark Ellis was never a huge contributor offensively, but at age 35, the modest power he used to provide is now effectively zilch. His slugging percentage over the last three seasons is .363. The Dodgers may not have minded taking whatever he gave him last year, but now that they have hundreds of millions of dollars invested in their immediate future, you can expect them to hold their second baseman to a higher standard in 2013. To that end, they acquired Skip Schumaker from the Cardinals in the offseason, presumably to play against right-handed pitchers. Ellis hit .321 with an .877 OPS against lefties last year, so they wouldn't want to remove from the picture entirely. Of course, if he was

barely relevant in Fantasy as a full-timer, he'll make nary a dent as a part-timer. Unless you get desperate for a middle infielder in an NL-only league, you can ignore Ellis on Draft Day.

[Danny Espinosa, WAS](#)

2B/SS

For the second time in his two full major league seasons, Nationals second baseman Danny Espinosa wasn't far off from a 20-20 campaign. In his rookie season, he fell short on the stolen base end, and then last year, Espinosa delivered 20 steals but only 17 home runs. Those two categories went a long way toward making Espinosa a top 12 second baseman in standard Rotisserie and Head-to-Head formats, but there were signs a repeat of that ranking might be in danger. Espinosa has never been an especially choosy hitter, but his plate discipline took a turn for the worse as he swung at more pitches, particularly those outside the strike zone. More strikeouts and less power were by-products of that trend. Because he filled in at shortstop for 34 games last season, Espinosa will have shortstop eligibility in 2013, but with second base being a shallow position, the multi-position eligibility doesn't really add much value. It could be easy for owners to overrate Espinosa due to his positions and 20-20 potential, but if he continues to struggle with pitch recognition his batting average, home runs and stolen bases could all decline. Whether you use him at second base or shortstop, Espinosa is best reserved for the later rounds in standard mixed league drafts.

[Logan Forsythe, SD](#)

2B

Logan Forsythe wasn't just an afterthought for Fantasy owners entering 2012. He was practically a non-entity. His foot surgery that landed him on the DL for the first two months didn't even register in most leagues because the Padres had Orlando Hudson to play second base. Well ... they did until they didn't, his poor performance prompting his release in mid-May, just when Forsythe was gearing up to return. Forsythe didn't take long to make an impression in Fantasy, hitting .409 with a 1.273 OPS in his first week on the job. No, he didn't sustain that pace or provide a bunch of homers or steals the rest of the way, which might be why some Fantasy owners have yet to take notice. But he did contribute just enough across the board -- via a solid walk rate, a decent number of doubles and triples and, yes, a few homers and steals -- to factor in mixed leagues. Don't believe it? Fine. Just know that in standard Head-to-Head leagues, he averaged about as many Fantasy points per game as Danny Espinosa. Because his ceiling only goes so high, you wouldn't want to overvalue Forsythe on Draft Day, but if you play in a deep enough league that someone like Neil Walker would go off the board in the middle rounds, you might be just as well off snagging Forsythe late.

2011	150	12	32	0	12	3	0.213	70.5

Jedd Gyorko, SD**2B/3B**

On the basis of numbers alone, Jedd Gyorko deserved a shot in the majors last year. The Padres didn't give it to him mostly because they didn't know how he fit in at the time. Chase Headley was breaking out with MVP-like numbers, making him suddenly part of the long-term picture as well. Logan Forsythe was emerging at second base, making Gyorko's transition there something that didn't need to be rushed. So at Triple-A Tucson he sat, except when the time came to bat. Then, he hit -- and oh, did he it. If anything, his 2012 numbers were brought down by his time at Double-A San Antonio. Of course, that's probably the biggest reason to doubt his top-prospect status. As impressive as his minor-league track record is, his best numbers came in the two leagues most skewed toward hitters, the California League and the Pacific Coast League. In two stints in between, his OPS dropped below .800. Even with the fences coming in at PETCO Park, his power stroke is no certainty to translate. Still, he's a well-rounded enough hitter to make an impact in Fantasy, particularly if he moves to second base. Right now, that's the most-likely scenario. The Padres would be willing to move Forsythe to shortstop if Gyorko proves he's ready this spring. Because of that, the 24-year-old has sleeper appeal even in standard mixed leagues.

Year	AB	R	H	HR	RBI	SB	BA	FPTS
2013 (proj)	500	64	137	21	61	1	0.274	347.5

Jerry Hairston, LAD**2B/3B/OF**

Jerry Hairston filled the role of utility player admirably last year, starting at three different positions (four if you count DH) for the Dodgers. That said, he was more of an able body than a trend setter when in the lineup. At age 36, he doesn't run much anymore, and he was never the power hitter his brother is. If Luis Cruz falters at third base and Hairston ends up being the one to replace him, the journeyman will be worth owning in NL-only leagues just for the at-bats. Understand that the majority of those at-bats will be hollow, though.

Year	AB	R	H	HR	RBI	SB	BA	FPTS
2013 (proj)	335	38	87	6	36	4	0.260	210
2012	238	19	65	4	26	1	0.273	149.5
2011	337	43	91	5	31	3	0.270	222

Josh Harrison, PIT**2B/SS**

Josh Harrison served as a super utility man for the Pirates last season, but did not do a whole lot with the bat. He hit just .233 with three homers and 16 RBI while stealing seven bases in 249 at-bats. Harrison batted .272 with a .374 slugging percentage during his call-up in 2011, however, so he could still have some upside. His versatility gives him some low-end appeal in Fantasy but without the offense and playing time to back it up, plan on ignoring the 25-year-old in all but the deepest of NL-only formats in 2013.

Year	AB	R	H	HR	RBI	SB	BA	FPTS

2012	249	34	58	3	16	7	0.233	145.5
2011	195	21	53	1	16	4	0.272	108

Aaron Hill, ARI**2B**

If Aaron Hill didn't have the best year of his career in 2012, he definitely came close. His .302 average was the highest of his career, his 26 home runs, 44 doubles and 14 steals all qualified as the second most and his .882 OPS blew his previous career high away. At 31 years old, Hill is still in his prime years and he's found a nice park in which to hit in Arizona. It would be foolish to ignore the .225 average and .660 OPS he posted in 2010 and 2011, but he does have three 25 home run seasons in his last four now, along with a career .272 average, so that 2011 season split between the Blue Jays and Diamondbacks looks more like the aberration. A top option at a position that's looking shallow in 2013, Hill should be one of the first five second basemen off the board on Draft Day.

Year	AB	R	H	HR	RBI	SB	BA	FPTS

2011	520	61	128	8	61	21	0.246	348

Brent Lillibridge, CHC**1B/2B/OF/SS**

Brent Lillibridge played for three teams in 2012, hitting .250 with three home runs and 13 steals in 190 at-bats. While he shouldn't be a draft pick this season, it's worth keeping track of his situation, as Lillibridge has two straight seasons of 10 or more steals despite not cracking 200 at-bats either year. For a single-league team in need of a band-aid because of injury or demotion, Lillibridge is at least a decent source of speed as a short-term plug-in off the waiver wire.

2011	186	38	48	13	29	10	0.258	168

Stephen Lombardozzi, WAS**2B/OF**

Even though he didn't have a steady job at any position, Steve Lombardozzi found plenty of work in his rookie season with the Nationals, starting 83 games and playing in a total of 126 games. He was every bit the contact hitter that he had been in the minors, but Lombardozzi's results fell a little short of the standard he set in his various minor league stops. Instead of flirting with .300, Lombardozzi hit just .273, and he did so with very little power and only five stolen bases. While it's doubtful that he will ever be much of a home run threat, Lombardozzi should produce more doubles and triples this season, and the potential is there for a 20-steal season. Even without a regular role, Lombardozzi can do enough good things to be worth drafting in NL-only leagues.

Year	AB	R	H	HR	RBI	SB	BA	FPTS

2011	31	3	6	0	1	0	0.194	10

Daniel Murphy, NYM**2B**

Daniel Murphy began 2012 as the opening day second baseman in New York, but did not take the next step many owners thought he would. After hitting .320 with six home runs, 49 RBI and a .448 slugging percentage over 391 at-bats in 2011, he regressed a bit in 571 at-bats in 2012. He batted .295 in the first half and fell off a bit after the All-Star break, finishing the year hitting .291 with six homers and 65 RBI. Murphy also slugged just .403 with a .332 on-base percentage. The 40 doubles were nice for all those points-leaguers out there, and with the fences coming in at Citi Field, the 27-year-old should be able to increase his offensive production in 2013. Second base might be the thinnest position in Fantasy and Murphy is a solid option if you grab him with a late-round pick on Draft Day.

Year	AB	R	H	HR	RBI	SB	BA	FPTS

2011	391	49	125	6	49	5	0.320	284

Cliff Pennington, ARI**2B/SS**

When Cliff Pennington was dealt to the Diamondbacks this offseason, the part of the trade that sent Chris Young to Oakland was what drew the most attention. Given that Pennington owns a career .249 batting average with just 24 home runs over 525 games, Fantasy owners would have to look hard to find something to get excited about. Once a stolen base threat, Pennington hasn't nabbed more than 15 bags in either of the last two seasons. However, there is one trend that should give owners some mild optimism. Pennington hit all six of his home runs on the road last season, and in his three years as a full-timer, 15 of his 20 homers have come away from O.co Coliseum. While this won't make him viable in standard mixed leagues, the potential for Pennington to reach double digits in homers and steals -- now that he gets to play his home games at Chase Field -- elevates his value among shortstops in deeper mixed leagues, as well as in NL-only leagues.

Year	AB	R	H	HR	RBI	SB	BA	FPTS
2013 (proj)	440	52	107	7	40	17	0.243	269
2012	418	50	90	6	28	15	0.215	224
2011	515	57	136	8	58	14	0.264	315

Brandon Phillips, CIN**2B**

Brandon Phillips continued to be the Brandon Phillips Fantasy players know and love in 2012, nearly duplicating his 2011 and 2010 seasons with 18 home runs (18 in 2011 and 2010), 15 steals (14 in 2011, 16 in 2010) and a .281 average (.287 combined in 2011 and 2010). Phillips saw a slight drop-off in doubles, going from 38 in 2011 to 30 in 2012, but it was a minor quibble. At 31, Phillips is essentially the same player he was over the past five seasons, with slightly less of a speed output but slightly more to offer in batting average. A top option at a shallow position for 2013, just hit copy and paste on his 2012 (or 2011 ... or 2010) batting line, and expect that from him in 2013. He should be off most draft boards by the middle rounds.

Year	AB	R	H	HR	RBI	SB	BA	FPTS
2013 (proj)	600	88	164	17	81	13	0.273	444.5
2012	580	86	163	18	77	15	0.281	436.5
2011	610	94	183	18	82	14	0.300	484.5

Martin Prado, ARI**2B/3B/OF**

That's more like it, right? After slumping to a .260 batting average during a 2011 season in which he battled a staph infection, Prado got back to the .300 mark in 2012. And though his main contributions in Fantasy were doubles and runs scored, he emerged as a viable steals threat as well, swiping 17 bases. His modest across-the-board totals made him a reliable mixed-league option even when his eligibility was limited to third base and the outfield, but his value soared later in the year when he got the five games necessary to gain eligibility at shortstop and second base. Of course, he's not eligible at either position anymore, and now that he's with the Diamondbacks, having come over from Atlanta in the Justin Upton trade, he'll most likely play third base exclusively. Because Prado won't provide more than 10-15 home runs or stolen bases in a given year, he doesn't have the upside to rate among the elite players at third base or the outfield, but seeing as he's hit .300 or better four of the last five seasons, he's as safe as you'll find among that next tier.

Year	AB	R	H	HR	RBI	SB	BA	FPTS
2013 (proj)	625	85	189	12	65	12	0.302	461.5
2012	617	81	186	10	70	17	0.301	476.5
2011	551	66	143	13	57	4	0.260	344

Josh Rutledge, COL**2B/SS**

Josh Rutledge's prospect status soared in 2011, when he blistered California League pitching for a .346 batting average. Last season, he proved that his performance was not just the by-product of playing in an extremely hitter-friendly circuit, as he hit .306 with 13 home runs in 87 Texas League games. A groin injury to shortstop Troy Tulowitzki ultimately forced Rutledge to be recalled in mid-July, and he responded by hitting .345 with seven home runs through the end of August. Rutledge's power and ability to make contact waned over the season's final month, raising concerns about whether he can sustain his initial level of production over a full season. With Tulowitzki returning, Rutledge will move over to second base, but with that position being no deeper than shortstop, Rutledge holds significant value, simply because of the potential he has shown. While his late-season swoon and relative inexperience make him a risky pick, he has enough upside to justify a pick in the middle rounds of a standard mixed league draft.

Year	AB	R	H	HR	RBI	SB	BA	FPTS
2013 (proj)	565	78	159	15	69	16	0.281	403.5
2012	277	37	76	8	37	7	0.274	204

Skip Schumaker, LAD**2B/OF**

Skip Schumaker had been as much of a mainstay for the Cardinals as any player since Albert Pujols left, having gotten semi-regular playing time at either left field or second base since 2008. But with his at-bats dwindling in recent years, the Cardinals decided this offseason that they no longer had a need for him, shipping him to Los Angeles for a minor-leaguer. With the star-studded Dodgers, Schumaker could potentially have a resurgence of sorts. Not only will he provide insurance for Carl Crawford, who's recovering from Tommy John surgery, but he could potentially emerge as the better half of a lefty-righty platoon with 35-year-old Mark Ellis at second base. Of course, Schumaker's lack of power or speed limits his appeal to NL-only leagues, but if he gets to bat

in the right spot in that lineup, he could be a sneaky middle infielder in those formats.

Year	AB	R	H	HR	RBI	SB	BA	FPTS

2012	272	37	75	1	28	1	0.276	168
2011	367	34	104	2	38	0	0.283	203

Marco Scutaro, SF**2B/SS**

Usually when a player joins the Rockies, Fantasy owners salivate at the thought of the extra-base power that comes with the move. Even for a doubles hitter like Marco Scutaro, a schedule full of home games at Coors Field seems sure to generate a windfall. Things didn't work out that way when Scutaro got to Denver. Through late July, he was batting .271 with four home runs and 16 doubles. In a strange twist, it took a trade to pitcher-friendly San Francisco for Scutaro's season to take off. As the Giants' regular second baseman, Scutaro struck out just 14 times in 243 at-bats, hitting .362 with three home runs and 16 doubles -- basically the same power output he had in Colorado, but in less than two-third of the at-bats. He will reprise his role as the Giants' second baseman in 2013, as he signed a three-year, \$20 million deal with the team this offseason. Though he is extremely unlikely to replicate his late season performance, which included a .328 postseason batting average, he should be more productive than he was during his Rockies stint. Be careful not to overvalue Scutaro on Draft Day due to his late-season hot streak, but he is still a good option in the late rounds of standard mixed league drafts.

Year	AB	R	H	HR	RBI	SB	BA	FPTS
2013 (proj)	605	89	179	8	68	7	0.296	425.5
2012	620	87	190	7	74	9	0.306	445.5
2011	395	59	118	7	54	4	0.299	307

Donovan Solano, MIA**2B**

After toiling for seven years in the Cardinals' farm system, Donovan Solano got his first taste of the majors in 2012. He came to spring training with the Marlins and nearly made the opening day roster. He had to wait until May for his callup, and by August, he was the everyday second baseman. Solano's opportunity to be a starter came as a result of the Marlins trading away Omar Infante and, subsequently, Emilio Bonifacio missing almost the entire last two months with thumb and knee injuries. The pared-down Marlins will probably rely on Solano to man the keystone position again in 2013. Based on his minor league numbers, it appears that Solano overachieved with a .295 batting average last season, and he doesn't offer much in terms of power or steals. Solano will get at-bats, though, and the potential for at least a decent batting average makes him a reasonable low-end play in NL-only leagues.

Year	AB	R	H	HR	RBI	SB	BA	FPTS
2013 (proj)	410	45	110	3	39	10	0.268	238.5
2012	285	29	84	2	28	7	0.295	172

Ryan Theriot, SF**2B**

Ryan Theriot spent much of last season as the Giants' starting second baseman, but shortly after the team acquired Marco Scutaro from the Rockies in late July, he lost his job and nearly all of his playing time. The Giants couldn't be faulted for benching Theriot, as he provided little besides his typical batting average around .270. Earlier in his career, Theriot drew walks and got on base frequently, but his plate discipline has eroded over the last three years. Now a free agent, Fantasy owners shouldn't expect Theriot to land a starting role, but he should be able to find work as a utility infielder. As such, he could give owners double-digit steals and be worth using in deeper league-specific formats.

Year	AB	R	H	HR	RBI	SB	BA	FPTS

2012	352	45	95	0	28	13	0.270	208.5
2011	442	46	120	1	47	4	0.271	258.5

Dan Uggla, ATL**2B**

Dan Uggla's .233 batting average in 2011 felt like more than a .233 batting average because of the way he achieved it, rebounding to hit .296 with a .948 OPS in the second half after hitting .185 with a .621 OPS in the first half. Likewise, his .220 batting average in 2012 felt like less than a .220 batting average because from about June 6 to the end of the season -- a span of 99 games -- he was positively worthless in Fantasy, hitting .185 with nine home runs and a .644 OPS. The lack of home runs is especially discouraging. Uggla is no stranger to cold streaks or low batting averages, but 30 home runs were a given for him over the first six years of his career. Seeing him finish with only 19 is almost unfathomable. And because it happened alongside an unprecedented cold streak in his age-32 season, you have to question whether or not reduced bat speed is the culprit. If that's the case, Uggla could be in the early stages of a swift and ugly decline. Or he may have just had a down year. No matter which way you lean, you have to acknowledge he's no longer the safe bet he used to be. Rickie Weeks and Brandon Phillips should be long gone before you make a play for Uggla.

Year	AB	R	H	HR	RBI	SB	BA	FPTS

2011	600	88	140	36	82	1	0.233	432

Chase Utley, PHI**2B**

Chase Utley played, essentially, two half seasons in 2011 and 2012. He showed up late to both, gave glimpses of his past greatness, but didn't exactly overwhelm enough for Fantasy owners to flock in droves. Coming into 2013, however, Utley looks healthy and ready to return to form. While his batting average has been in a tailspin since 2007, the flashes we've seen of him the last two seasons -- especially the 2012 version -- suggest that he still has some pop in his bat. And his creaky knees haven't sapped him of his speed. Extrapolate last year over a full season, and Utley has 20-20 numbers, along with about 30 doubles. He's capable of getting the average back up to .290, and there's reason to expect his power and speed numbers to improve as he starts 2013 healthy and as a member of the Phillies, not doing base-running exercises at the spring training complex. He will be off the board in the early-to-middle rounds of most drafts.

Year	AB	R	H	HR	RBI	SB	BA	FPTS
2013 (proj)	465	74	125	17	69	14	0.269	402
2012	301	48	77	11	45	11	0.256	276.5
2011	398	54	103	11	44	14	0.259	324.5

Wilson Valdez, MIA**2B/SS**

Free agent infielder Wilson Valdez has seen his production -- and at-bats -- slowly slip every year since 2010. Last season, Valdez hit .206 with four doubles and three steals in 194 at-bats. Just two seasons ago, he was hitting .256 with four home runs and seven steals. Valdez is a utility/bench player who won't see enough at-bats to make a Fantasy impact. His ceiling, even in an optimal situation, isn't worth a pick on Draft Day.

Year	AB	R	H	HR	RBI	SB	BA	FPTS
2013 (proj)	180	20	44	2	27	4	0.244	112
2012	194	15	40	0	15	3	0.206	69
2011	273	39	68	1	30	3	0.249	162.5

Neil Walker, PIT**2B**

Neil Walker did not have as productive of a campaign as he did in 2011 a year ago, but still finished as a top 20 second baseman in Fantasy. While he set a new career mark with 14 home runs, injuries limited him to 129 games and he finished with 69 RBI and 62 runs scored. A herniated disc in his back ended his season in September but the 27-year-old is expected to be ready for the start of spring training and could be in for his best season yet. Walker has compiled a .429 slugging percentage with a .341 on-base percentage over the last three years and based on his numbers in 2012, he should be able to pick up his power numbers this season. Walker will still be available in the middle rounds on Draft Day, but could make a difference at a thin position.

Year	AB	R	H	HR	RBI	SB	BA	FPTS
2013 (proj)	585	78	165	16	85	5	0.282	423.5
2012	472	62	132	14	69	7	0.280	338
2011	596	76	163	12	83	9	0.273	416

Rickie Weeks, MIL**2B**

Rickie Weeks began 2012 as a much more patient hitter than he had been in the past, but the results only served to test the patience of Fantasy owners. Longer plate appearances resulted in more walks but also far more strikeouts than usual, which robbed Weeks of points on his batting average and extra-base power. He was far less selective over the last three months of the season, and his relative impatience paid off in the form of a .269/.350/.478 slash line. Those numbers are very much in line with Weeks' production from 2009 to 2011, so it appears that Weeks' .183/.303/.306 line from the first three months was just an outlier. Even with those bad months weighing down his overall numbers, Weeks finished as a top 12 second baseman in standard Rotisserie and Head-to-Head formats. He can probably be had in the early portion of the middle rounds, and if he can stay healthy and maintain more consistency, he could wind up being a steal.

Third Baseman

[Pedro Alvarez](#), PIT

3B any format.

Pedro Alvarez was one of the biggest disappointments in Fantasy after his dismal 2011 campaign but showed in 2012 why the Pirates took him with the No. 2 overall pick in the 2008 MLB draft. He hit 16 home runs with 50 RBI in the first half and finished with career highs in homers (30), RBI (85) and slugging percentage (.467). While his .244 average was not that impressive, it was well above the .191 mark he posted the year before and it looks as though the 25-year-old is finally ready to become a reliable option in Fantasy. The Pirates are counting on Alvarez, along with Andrew McCutchen and Neil Walker, to reverse the losing trends in Pittsburgh. Fantasy owners are hoping he can continue to progress as a power-hitting third baseman. At a deeper-than-you-might-think position in Fantasy, you could wait fairly late for him on Draft Day and get some good value.

[Matt Carpenter](#), STL

1B/2B/3B/OF

Nobody expected much from Matt Carpenter when he made the Cardinals out of spring training last year. Overshadowed by Matt Adams and Zack Cox in the minor-league system, he wasn't as much a building block for the future as a 26-year-old who had nowhere else to go. But beginning the first week of the season, when he filled in for an injured Lance Berkman, Carpenter showed the Cardinals he had a bat worth keeping him in the lineup. And they found creative ways to get it there, letting him spell an injury-prone David Freese or fill in for a banged-up Carlos Beltran from time to time. They even gave him a couple starts at second base and liked his performance there enough to give him an extended look at the position this spring. Of course, top prospect Kolten Wong will eventually claim second base, but among the candidates currently deemed major league-ready, Carpenter certainly offers the most offensively. With a good on-base percentage and doubles and triples pop, he would have genuine mixed-league appeal if he won a starting job. It's too much of a long shot for you to target him outside of NL-only formats, though.

2011	15	0	1	0	0	0	0.067	4

[Eric Chavez](#), ARI

3B

Eric Chavez had a career resurgence in 2012 with the Yankees, hitting .281 (his highest average since 2003) with 16 home runs (his most since 2006) in 278 at-bats. The six-time Gold Glove winner showed he could still play at the major league level and parlayed his performance into a contract with the Diamondbacks, who have the not-untouchable Chris Johnson projected as their starter. Chavez is constantly derailed by injuries, but he managed to stay somewhat healthy in 2012 and could carry that momentum over to 300 at-bats in 2013. He's worth a reserve pick in NL-only formats.

Year	AB	R	H	HR	RBI	SB	BA	FPTS
2013 (proj)	183	21	48	6	24	0	0.262	116.5

2011	160	16	42	2	26	0	0.263	96

[Luis Cruz](#), LAD

3B/SS

Given all the big contracts the Dodgers have added to the payroll in the last six months or so, you might be surprised to learn that Luis Cruz is still their projected starter at third base heading into 2013. Sure, he put together a decent batting average last year, including a .331 mark over his final 48 games, but because he doesn't fit the high-profile image the Dodgers are trying to build, he can't afford any sort of letup this season. He's already lacking the power of a prototypical third baseman. Cruz's bat would profile better at, say, shortstop or second base, but the Dodgers already moved him off shortstop in favor of Hanley Ramirez last July, which says something about his defense. In a loaded lineup, Cruz should make an adequate contribution in NL-only leagues, but his lack of upside could bring his time as a starter to an end whenever the Dodgers feel the itch to make a move. You wouldn't want to invest too heavily in him in

Year	AB	R	H	HR	RBI	SB	BA	FPTS
2013 (proj)	410	40	113	8	46	1	0.276	245.5
2012	283	26	84	6	40	2	0.297	185

[Daniel Descalso](#), STL

2B/3B/SS

Two years into his big-league career, Daniel Descalso has become sort of the designated stand-in around the Cardinals' infield. In 2011, he was primarily the starter at third base when David Freese was sidelined with the latest of his injuries. In 2012, he was primarily the starter at second base just because the Cardinals didn't have anyone better. Come 2013, he might not have a place to stand anymore. True, heading into the year, Descalso is once again the favorite to start at second base, but with displaced on-base machine Matt Carpenter feverishly working to learn the position and top prospect Kolten Wong knocking on the door to the majors, Descalso is on the verge of a benching. Frankly, you wouldn't have it any other way in Fantasy. He provides almost nothing offensively and, at age 26, has nearly maxed out his potential. If late in an NL-only draft, you're desperate for someone who'll give you at-bats right out of the gate, Descalso is a reasonable choice, but don't expect those at-bats to last all year.

Year	AB	R	H	HR	RBI	SB	BA	FPTS

2011	326	35	86	1	28	2	0.264	183.5

[Greg Dobbs](#), MIA

1B/3B/OF

Aside from Hanley Ramirez's half-season at the hot corner, the Marlins have had problems finding a regular third baseman over the last two years, but Greg Dobbs has received 114 starts at the position over that span. The Marlins signed Placido Polanco this offseason, so starts will probably be harder to come by for Dobbs in 2013. Even as a starter, Dobbs has limited appeal for Fantasy, as he has lost some of the home run thump he showed when he was with the Phillies. Dobbs still has gap power, so he can produce a decent batting average, but that's about all that Fantasy owners can count on. Only consider drafting Dobbs in deeper NL-only leagues.

2011	411	38	113	8	49	0	0.275	228.5

[Juan Francisco](#), ATL

3B

Juan Francisco, who the Reds dealt to the Braves last spring mainly because they couldn't find a roster spot for him, hardly set the world afire in his first extended look as a major-leaguer last year. In fact, his numbers were so uninspiring that by mid-June, the Braves had abandoned their plan to make him the preferred platoon option for an aging Chipper Jones. But now, Jones is retired, and though conventional wisdom suggests newly acquired Chris Johnson will replace him at third base, Francisco's performance in the Dominican winter league suggests he deserves a second look. This offseason, the Braves had him lose weight and cut down on the extra movement in his swing, hoping to make better use of the power potential that allowed him to hit nine home runs in 192 at-bats even with so little contact last year. As encouraged as they are by the results, Francisco is in the mix to start in 2013, at least against right-handers. The possibility makes him a fine sleeper in NL-only leagues.

2011	93	10	24	3	15	1	0.258	61

Todd Frazier, CIN

1B/3B

Todd Frazier is going to enter 2013 with eligibility at both first and third base. And he'll be a viable candidate at both after putting up a .273 average with 19 home runs and 26 doubles in just 422 at-bats last season. Frazier benefited from timely injuries to Scott Rolen and Joey Votto in 2012, allowing him to show off his talents, which would have otherwise been buried on the bench. Heading into 2013, Frazier is penciled in as the starting third baseman, but he also played seven games in the outfield last year, so there exist some scenarios -- mostly among Reds fans -- where Frazier starts in place of free agent Ryan Ludwick. Either way, outfield eligibility will only increase his value. Frazier should be a mid-to-late round selection in most drafts, able to help in average and power categories in 2013.

2011	112	17	26	6	15	1	0.232	78.5

David Freese, STL

3B

David Freese came into 2012 with plenty of hype as the defending World Series MVP, and you could argue he delivered on that hype, doubling his previous career high with 20 home runs. But his percentages weren't all that different from his first three years in the majors. He just happened to stay on the field this time, avoiding the freak injuries that limited him to no more than 333 at-bats prior to last year. Because of all that missed time, Freese is probably older than you think. He'll turn 30 within the first month of the 2013 season, so chances are he doesn't have much untapped potential. What you saw from him last year is about the best you can expect from him going forward. So how good is it? Well, it's good enough to make him startable in all Fantasy leagues. High batting average, decent pop -- nothing wrong with that. Of course, Freese still can't hold a candle to Adrian Beltre or Chase Headley or any of the other high-end options at a position that's back to being pretty deep. His power has its limits and he doesn't walk much. Plus, you still have to guard against some injury risk. For mixed-league owners, Freese is more of a middle-round fallback option than a player to target.

2011	333	41	99	10	55	1	0.297	235.5

Alex Gonzalez, MIL

1B/3B/SS

Alex Gonzalez has been inconsistent in recent years, but he started off the 2012 season as if it was going to be one of his better years. One month in from opening day, Gonzalez had a .259/.326/.457 slash line that would have put him on pace for one of his best seasons, but a torn ACL in his right knee put him out of commission for the rest of the year. For awhile, the Brewers got by with journeymen at shortstop, but they acquired prospect Jean Segura from the Angels in late July, and he was given a starting role within days of arriving. Gonzalez, now a free agent, could return to the Brewers, but if he did, he would likely be Segura's backup. Should he sign on as some team's starting shortstop, he showed early last season that he still has some pop in his bat. He has not been one to hit for average or produce runs consistently, so at best, Gonzalez is an option for owners in league-specific formats.

Jedd Gyorko, SD

2B/3B

On the basis of numbers alone, Jedd Gyorko deserved a shot in the majors last year. The Padres didn't give it to him mostly because they didn't know how he fit in at the time. Chase Headley was breaking out with MVP-like numbers, making him suddenly part of the long-term picture as well. Logan Forsythe was emerging at second base, making Gyorko's transition there something that didn't need to be rushed. So at Triple-A Tucson he sat, except when the time came to bat. Then, he hit -- and oh, did he hit. If anything, his 2012 numbers were brought down by his time at Double-A San Antonio. Of course, that's probably

the biggest reason to doubt his top-prospect status. As impressive as his minor-league track record is, his best numbers came in the two leagues most skewed toward hitters, the California League and the Pacific Coast League. In two stints in between, his OPS dropped below .800. Even with the fences coming in at PETCO Park, his power stroke is no certainty to translate. Still, he's a well-rounded enough hitter to make an impact in Fantasy, particularly if he moves to second base. Right now, that's the most-likely scenario. The Padres would be willing to move Forsythe to shortstop if Gyorko proves he's ready this spring. Because of that, the 24-year-old has sleeper appeal even in standard mixed leagues.

Year	AB	R	H	HR	RBI	SB	BA	FPTS
2013 (proj)	500	64	137	21	61	1	0.274	347.5

Jerry Hairston, LAD

2B/3B/OF

Jerry Hairston filled the role of utility player admirably last year, starting at three different positions (four if you count DH) for the Dodgers. That said, he was more of an able body than a trend setter when in the lineup. At age 36, he doesn't run much anymore, and he was never the power hitter his brother is. If Luis Cruz falters at third base and Hairston ends up being the one to replace him, the journeyman will be worth owning in NL-only leagues just for the at-bats. Understand that the majority of those at-bats will be hollow, though.

2011	337	43	91	5	31	3	0.270	222

Jack Hannahan, CIN

3B

Jack Hannahan has spent the last two seasons getting about 300 at-bats with Cleveland, with a .247 average and 12 total home runs. Crossing the state to play for the Reds in 2013, the prospects don't look much brighter for Hannahan, who is blocked by Todd Frazier at third and Joey Votto at first. NL-only owners may want to grab Hannahan as bench depth, as he seems to find his way to those 300 at-bats, but he has little value elsewhere in Fantasy.

2011	320	38	80	8	40	2	0.250	205

Chase Headley, SD

3B

Most breakthroughs happen so early in a player's career that you never have reason to question whether or not they will happen. But others take time. Some, in fact, take so long that you're pretty sure they'll never happen, until they do. Which brings us to Headley, the sweet-swinging switch-hitter who, with his four homers during an injury-plagued 2011, appeared to have leveled off as a marginally productive third baseman with favorable road splits. The first half of 2012 looked like more of the same. But something clicked for Headley on Aug. 1 at Cincinnati -- a hitter's park, oddly enough. From that point forward, he hit 19 home runs with a .318 batting average and 1.020 OPS in 220 at-bats. His performance was basically on par with Miguel Cabrera during that stretch, and he earned MVP consideration as a result. So now what? Is Headley elite? Can he do it again? No one can say for sure. But with the fences coming in at PETCO Park, making it not so PETCO Park anymore, we'll basically get to see the road version of Headley every time out. The last two months last year were probably a sneak peak of that. Though you may opt for the more proven Ryan Zimmerman or David Wright on Draft Day, Headley deserves to go off the board in that same class.

Year	AB	R	H	HR	RBI	SB	BA	FPTS
2013 (proj)	530	75	147	21	84	13	0.277	427
2012	604	95	173	31	115	17	0.286	550.5
2011	381	43	110	4	44	13	0.289	271

Chris Johnson, ATL**1B/3B**

Chris Johnson played 44 games with the Diamondbacks after a July trade and immediately began hammering the ball. His power streak eventually died down, but he finished his 147 at-bat stint with Arizona sporting a .286 average with seven home runs and 35 RBI. After being included in the January deal that sent Justin Upton to Atlanta, Johnson currently projects as the starting third baseman for the Braves -- the heir apparent to Chipper Jones -- and, while he isn't the most exciting player in Fantasy, he does have the ability to hit for a nice average (around .270). Given regular at-bats, Johnson could also hit 15-18 home runs. Consider him the poor man's Todd Frazier or Will Middlebrooks. Decent average, decent power, but not enough in either category to have much value outside of NL-only leagues.

Year	AB	R	H	HR	RBI	SB	BA	FPTS
2013 (proj)	300	33	82	10	42	3	0.273	185.5
2012	488	48	137	15	76	5	0.281	322
2011	378	32	95	7	42	2	0.251	193.5

Jordan Pacheco, COL**1B/3B**

Jordan Pacheco probably doesn't have an everyday position to play in the Rockies' lineup this season, but that may not stand in his way of getting regular at-bats. He did start a team-high 80 games at third base a year ago, but Pacheco could be spread around the diamond even more this season. He could see ample time at catcher, giving Wilin Rosario more rest, and he could also fill in for Todd Helton at first base if he continues to miss time due to injury. Owners shouldn't expect many homers from Pacheco, but as a contact hitter with legitimate gap power, he could exceed a .300 batting average for a second straight season. That alone could give Pacheco some mixed league value if he becomes catcher-eligible, but that's not a given, so don't look to target him outside of NL-only leagues on Draft Day.

Year	AB	R	H	HR	RBI	SB	BA	FPTS
2013 (proj)	380	45	107	4	46	5	0.282	244.5
2012	475	51	147	5	54	7	0.309	311.5
2011	84	5	24	2	14	0	0.286	49.5

Placido Polanco, MIA**3B**

Dogged by back, wrist, finger and knee problems in 2012, Placido Polanco produced a disastrous line for his Fantasy owners, hitting just .257 (his lowest average since 1998), with two home runs, 19 RBI and no steals (a career first) in 303 at-bats. The 37-year-old eventually lost his job to Kevin Frandsen and was cut loose by the Phillies after the season, ending up with the decimated Marlins and a starting job at third base. Polanco doesn't supply enough power or speed to be embraced by the masses in Fantasy, and he lost middle infield eligibility in 2010, so he only qualifies at third base (unless the wide-open Marlins throw him at second base for a spell). Polanco can supply average to a team in need, but his days of being a mixed-league contributor are gone. Polanco is a late-round bench addition in NL-only formats.

Year	AB	R	H	HR	RBI	SB	BA	FPTS
2013 (proj)	560	71	159	4	53	1	0.284	335.5
2012	303	28	78	2	19	0	0.257	153.5
2011	469	46	130	5	50	3	0.277	284

Martin Prado, ARI**2B/3B/OF**

That's more like it, right? After slumping to a .260 batting average during a 2011 season in which he battled a staph infection, Prado got back to the .300 mark in 2012. And though his main contributions in Fantasy were doubles and runs scored, he emerged as a viable steals threat as well, swiping 17 bases. His modest across-the-board totals made him a reliable mixed-league option even when his eligibility was limited to third base and the outfield, but his value soared later in the year when he got the five games necessary to gain eligibility at shortstop and second base. Of course, he's not eligible at either position anymore, and now that he's with the Diamondbacks, having come over from Atlanta in the Justin Upton trade, he'll most likely play third base exclusively. Because Prado won't provide more than 10-15 home runs or stolen bases in a given year, he doesn't have the upside to rate among the elite players at third base or the outfield, but seeing as he's hit .300 or better four of the last five seasons, he's as safe as you'll find among that next tier.

Year	AB	R	H	HR	RBI	SB	BA	FPTS
2013 (proj)	625	85	189	12	65	12	0.302	461.5
2012	617	81	186	10	70	17	0.301	476.5
2011	551	66	143	13	57	4	0.260	344

Aramis Ramirez, MIL**3B**

In most seasons, you can pencil Aramis Ramirez in for an average close to .300 and roughly 25 home runs. His 2012 campaign was no exception, as Ramirez hit an even .300 with 27 homers, but he gave points league owners an unexpected bonus by hitting a National League-leading 50 doubles. The extra-base explosion helped Ramirez to post his highest RBI (105) and runs (92) totals since 2008. Now that the former Cub and Pirate is returning for his second season with the Brewers, owners have to wonder if he can put up similar numbers again in 2013. Given that Ramirez's doubles production was unprecedented for him, at age 34, owners should probably expect at least a slight dropoff. Still, Ramirez has been consistent enough over the years to merit a pick in the latter part of the early rounds, as he still ranks among the top 10 third basemen.

Year	AB	R	H	HR	RBI	SB	BA	FPTS

2011	565	80	173	26	93	1	0.306	480.5

Hanley Ramirez, LAD**3B/SS**

An incredible five-year run in Miami came to an unceremonious end midway through 2012, when the Marlins shipped Hanley Ramirez to the Dodgers. At the time, Ramirez was hitting only .246, making his personality flaws a bit harder to overlook, especially coming on the heels of an injury-plagued 2011 in which he hit only .243. Unfortunately, he didn't reverse course with the Dodgers, finishing well short of the .300 mark he used to achieve so easily. A couple positives did come from Ramirez's move to Los Angeles, though. It allowed him to play shortstop again, meaning he retains eligibility at the weakest position in Fantasy. It also put him in a star-studded lineup, giving opposing pitchers no choice but to pitch to him. Still, given the recent downward trend and the lingering questions about his work ethic, Ramirez probably isn't going to get back to get to being the best player in Fantasy. A 20-20 shortstop is hard enough to find that he may still go off the board as early as Round 2 or 3, but at this stage of his career, he's probably closer to dropping behind Ben Zobrist that leapfrogging Troy Tulowitzki and Jose Reyes at the position.

Year	AB	R	H	HR	RBI	SB	BA	FPTS

2011	338	55	82	10	45	20	0.243	271

Pablo Sandoval, SF**3B**

As he is about to enter his sixth season in the major leagues, Pablo Sandoval isn't getting any easier to get a bead on. In 2009 and 2011, the Panda wowed Fantasy owners with 20-plus homers and batting averages well in excess of .300. But in the seasons immediately following those two campaigns, his numbers trailed off decisively. He has also hurt owners in each of the last two seasons with time missed due to injuries, and in 2012 a broken hamate bone and a strained hamstring contributed to him sitting out 54 games. The one thing we can expect from Sandoval is a low strikeout rate, so even when he struggles to hit for power he can be counted on for at least a decent batting average. That's not enough to make Sandoval an elite third baseman, but the potential for extra-base power does make him a top 10 option at the position.

2011	426	55	134	23	70	2	0.315	360.5

Ian Stewart, CHC

Ian Stewart was traded from the Rockies to the Cubs before the 2012 campaign and earned the opening day nod at third base for Chicago. He was not able to get much going at the plate, however, as he batted just .201 with five home runs and 17 RBI before wrist surgery ended his season in mid-June. The Cubs re-signed Stewart to a one-year deal in the offseason and he is expected to compete for the starting job again. He will have to beat out Luis Valbuena and youngster Josh Vitters but at age 27, the potential is still there to have the breakout campaign owners have been waiting for. Stewart has the potential to hit 20-plus homers and drive in runs but based on his .224 average over the last three seasons, plan on leaving him for the deepest of NL-only formats on Draft Day.

Ryan Wheeler, COL

Ryan Wheeler had a somewhat inauspicious debut in 2012, arriving in the majors in July and hitting .239 with one home run over 50 games. The 24-year-old was traded to Colorado in the offseason and while his prospects of playing time remain low, he is in a great environment for Fantasy value if things break the right way (for instance, an injury to Chris Nelson). Wheeler has three straight seasons of double-digit home runs in the minors and a .313 batting average over four seasons. He could be dangerous if he cracks the Colorado lineup, but for now he's only worth drafting in reserve rounds of keeper leagues.

Ty Wigginton, STL

If there is such a thing as certainty in baseball, it is this: Ty Wigginton will get 300 at-bats. The Cardinals are his eighth team over a 12-year career, and Wigginton -- who enters almost every season labeled as a utility player who will see some at-bats here and there -- has gotten 300 at-bats every year but two. He has a decent .263 career average, has averaged more than 20 doubles a season since 2007 and hasn't dipped into single digits in home runs since 2005. The Cardinals have enough moving parts and injury risks to give would-be Wigginton owners hope that he will contribute in Fantasy. Eligible at first and third base in 2013, Wigginton makes for a decent late-round pick as a spare corner infielder in NL-only drafts.

Year	AB	R	H	HR	RBI	SB	BA	FPTS

2011	401	52	97	15	47	8	0.242	282

David Wright, NYM

The Mets locked up their cornerstone third baseman David Wright with an eight-year, \$138 million deal during the offseason after he had a serious bounce-back campaign in 2012. He batted .351 with 11 home runs and 59 RBI in the first half to earn his sixth career trip to the All-Star game. While his numbers fell off a bit in the second half, Wright ended up hitting .306 with 21 homers, 93 RBI and 15 stolen bases. He also slugged .492 while getting on base at a .391 clip, which was 10 points higher than his career mark. The 30-year-old holds Mets records for hits and RBI and could be in for an even better season in 2013 with the fences being moved in at Citi Field. Wright has proven time and again to be an elite option in Fantasy and should be one of the first third basemen off the board on Draft Day.

2011	389	60	99	14	61	13	0.254	317.5

3B Michael Young, PHI

Michael Young, the jack-of-all trades for the Rangers the last few years, will be eligible at first and third base going into 2013, despite playing nearly every infield position in 2012. And Young's move to Philly -- from one hitter's park to another -- will likely have little impact on his power numbers. Young will play third for Philadelphia and will likely stay there unless injury hits one of the all-stars at the other infield positions. While Young, 36, isn't the flashy, home-run hitting corner infielder that is the norm now in Fantasy, he does have a career .301 average, doesn't strike out a ton and points league participants can expect about 35 doubles from him every year. It's safe to consider 2012 a slump, although as he advances in age, there is some decline mixed in, as well (just not enough to justify that 2012 drop-off). One interesting misconception with Young is that he steals a lot of bases -- he hasn't hit double digits in steals since 2008 and his career high is 13. That lack of steals makes him less valuable in Rotisserie formats, although his yearly tendency to pick up middle infield eligibility does give him a tiny boost in value over similarly skilled counterparts. He should be off the board in the later rounds of mixed leagues, and will be a solid, cheap NL-only play in 2013.

2011	631	88	213	11	106	6	0.338	513

Ryan Zimmerman, WAS

At the end of June last season, it appeared the Ryan Zimmerman Fantasy owners had coveted every spring was gone for good. He limped into July with a .234/.297/.345 slash line that looked like it belonged to Brent Morel or Daniel Descalso rather than that of a two-time Silver Slugger winner. However, Zimmerman had been playing through a shoulder injury. A series of cortisone shots helped him rebound in the second half in a big way. From July 1 on, Zimmerman put up a .319/.384/.580 line powered by 20 home runs and 23 doubles. This offseason, Zimmerman underwent shoulder surgery, so with improved health owners have reason to expect something more like his second-half performance. Granted, Zimmerman has missed 98 games over the last three seasons, so he may have some durability issues. But then again, most of the top Fantasy third basemen not named Miguel Cabrera or Evan Longoria come with question marks. While he should come off the board well after Cabrera and Longoria do, Zimmerman is still worth an early round pick.

2011	395	52	114	12	49	3	0.289	286.5

3B

Shortstop

[Clint Barmes](#), PIT

SS

Clint Barmes provided the Pirates with some stability at shortstop in his first season in Pittsburgh but continued to underwhelm as a Fantasy option. He batted just .229 with eight homers and 45 RBI in 144 games. His .321 slugging percentage was nearly 70 points below his career mark and he got on base at a lowly .272 clip. The Pirates have Chase d'Arnaud waiting in the wings but with Barmes signed through 2013, it looks like he will retain his starting job. Owners would be wise to leave the 33-year-old for NL-only formats on Draft Day, however, as his best offensive days appear to be behind him.

Year	AB	R	H	HR	RBI	SB	BA	FPTS

2011	446	47	109	12	39	3	0.244	264

[Willie Bloomquist](#), ARI

SS

Willie Bloomquist will enter 2013 with shortstop eligibility, but no real clear path to playing time with the Diamondbacks. While he picked up at-bats in place of an injured Stephen Drew in the past, he also brought with him a lot of speed. But in 2012, Bloomquist stole just seven bases -- and was caught stealing 10 times -- in 80 games. This was down from 20 steals in 2011 over 97 games. While his average jumped to a career-high .302 (not counting a 12-game stint in 2002 when he hit .455), Bloomquist looks like he'll get about 250-300 at-bats in 2013. And with his steals totals dropping, the 35-year-old is best left for the waiver wires of NL-only formats.

Year	AB	R	H	HR	RBI	SB	BA	FPTS

2011	350	44	93	4	26	20	0.266	220.5

[Everth Cabrera](#), SD

SS

Can you guess who led the NL in stolen bases in 2012? It wasn't Jose Reyes, whose nine-figure free agent contract couldn't get him past the 40 mark. It wasn't Michael Bourn, who actually had a down year as far as that goes. It wasn't even Emilio Bonifacio, though it probably would have been if he hadn't lost so much time to injury. Believe it or not, it was Everth Cabrera, who didn't even arrive in the majors until May 17, meaning if he had been around for the other 23.5 percent of the season, he likely would have had somewhere in the neighborhood of 54 stolen bases. Have your attention yet? Here's the problem: He didn't do anything else especially well, hitting only .246, and with top prospect Jedd Gyorko expected to audition at second base this spring, the Padres have too many middle infielders to go around. One of Cabrera, Gyorko and Logan Forsythe figures to be the odd man out, and given the chances Cabrera has gotten already, a league-leading number of stolen bases might not be enough to save him. The good news is he doesn't necessarily need full-time at-bats to contribute in the steals category. As long as you understand he might end up being a one-trick pony, feel free to target Cabrera in the late rounds of Rotisserie drafts.

Year	AB	R	H	HR	RBI	SB	BA	FPTS
2013 (proj)	435	53	109	3	28	48	0.251	313
2012	398	49	98	2	24	44	0.246	277
2011	8	1	1	0	0	2	0.125	5.5

[Starlin Castro](#), CHC

SS

After leading the National League in hits in 2011, Starlin Castro took a bit of a step back in 2012, but still continued to progress as a solid option in Fantasy. He batted .291 with seven home runs, 43 RBI and 16 stolen bases in the first half en route to earning his second straight trip to the All-Star game. His numbers would fall off a bit in the second half but he still ended up hitting .283 while posting career highs with 14 homers, 78 RBI and 25 stolen bases. He also slugged .430 while playing in all 162 games. Castro's mental lapses have caused management in Chicago to sit him at times in his career, but there is no denying his offensive ability. At age 22, the sky is the limit for how good Castro can be, so plan on grabbing him before the middle rounds on Draft Day as an elite shortstop in Fantasy.

Year	AB	R	H	HR	RBI	SB	BA	FPTS

2011	674	91	207	10	66	22	0.307	472

[Zack Cozart](#), CIN

SS

After a somewhat hot start (.252 average and nine home runs in the first half) Zack Cozart -- despite five August home runs -- finished an uneven rookie season with a .246 average, 15 home runs and four steals over 138 games. Nothing in Cozart's line is especially shocking, based on what he's shown in the minors, and that's actually a bit of a problem when trying to assign value to him for 2013. Cozart had stolen as many as 30 bases in the minors, hit as many as 17 home runs and batted as high as .310. But he's also had seasons with far less impressive production, as well. There's no doubt he's capable of a .280 average, 18 home runs and 20 steals, but you can't expect those numbers going into 2013. Instead, maybe expect a slightly better average, more steals and keep the power right where it is. Add it all up and you have a bench player in most mixed leagues who will likely be taken in the late rounds of drafts in deeper formats.

Year	AB	R	H	HR	RBI	SB	BA	FPTS
2013 (proj)	570	77	143	18	40	6	0.251	346

2011	37	6	12	2	3	0	0.324	24

[Brandon Crawford](#), SF

SS

After getting a taste of regular play in 2011, Brandon Crawford was entrusted with the Giants' starting shortstop job last season. He did pretty much what most observers expected; he hit .248 with little power and played a mean defensive game. Crawford's prowess in the field may not seem relevant for Fantasy, but if nothing else, it does ensure him steady playing time. Given his lack of offense, that's really all that makes Crawford worth noting on draft day in NL-only leagues. Even in those deep formats, owners are better off targeting a more productive shortstop, but he's worth rostering as insurance for your starter. There are worse bench options to have, since as a 26-year-old, Crawford isn't too old to take an unanticipated step forward.

2011	196	22	40	3	21	1	0.204	107.5

[Luis Cruz](#), LAD

3B/SS

Given all the big contracts the Dodgers have added to the payroll in the last six months or so, you might be surprised to learn that Luis Cruz is still their projected starter at third base heading into 2013. Sure, he put together a decent batting average last year, including a .331 mark over his final 48 games, but because he doesn't fit the high-profile image the Dodgers are trying to build, he can't afford any sort of letup this season. He's already lacking the power of a prototypical third baseman. Cruz's bat would profile better at, say, shortstop or second base, but the Dodgers already moved him off shortstop in favor of Hanley Ramirez last July, which says something about his defense. In a loaded lineup, Cruz should make an adequate contribution in NL-only leagues, but his lack of upside could bring his time as a starter to an end whenever the Dodgers feel the itch to make a move. You wouldn't want to invest too heavily in him in any format.

Year	AB	R	H	HR	RBI	SB	BA	FPTS
2013 (proj)	410	40	113	8	46	1	0.276	245.5
2012	283	26	84	6	40	2	0.297	185

[Daniel Descalso](#), STL

2B/3B/SS

Two years into his big-league career, Daniel Descalso has become sort of the designated stand-in around the Cardinals' infield. In 2011, he was primarily the starter at third base when David Freese was sidelined with the latest of his injuries. In 2012, he was primarily the starter at second base just because the Cardinals didn't have anyone better. Come 2013, he might not have a place to stand anymore. True, heading into the year, Descalso is once again the favorite to start at second base, but with displaced on-base machine Matt Carpenter feverishly working to learn the position and top prospect Kolten Wong knocking on the door to the majors, Descalso is on the verge of a benching. Frankly, you wouldn't have it any other way in Fantasy. He provides almost nothing offensively and, at age 26, has nearly maxed out his potential. If late in an NL-only draft, you're desperate for someone who'll give you at-bats right out of the gate, Descalso is a reasonable choice, but don't expect those at-bats to last all year.

Year	AB	R	H	HR	RBI	SB	BA	FPTS
2013 (proj)	330	37	83	3	30	4	0.252	189.5
2012	374	41	85	4	26	6	0.227	197.5
2011	326	35	86	1	28	2	0.264	183.5

[Ian Desmond](#), WAS

SS

After a couple of seasons with the Nationals that failed to produce many home runs, the version of Ian Desmond that emerged out of Double-A as a potential speed and power threat appeared to be long gone. That version of Desmond reappeared in 2012 -- and with a vengeance. The 27-year-old shortstop sent 25 balls out of the park and swiped 21 bases and he did it in just 130 games with the Nationals. An oblique injury robbed Desmond of close to a month of the schedule, yet he still managed to rank third among all shortstops in standard Rotisserie scoring. His breakout might seem like a fluke to some, but the steals have been there all along and the power was in evidence when he hit 18 home runs over 135 games at Double-A Harrisburg between 2008 and 2009. Desmond isn't the safest bet among shortstops, but he is still worth taking among the first six players at the position.

2011	584	65	148	8	49	25	0.253	332.5

[Danny Espinosa](#), WAS

2B/SS

For the second time in his two full major league seasons, Nationals second baseman Danny Espinosa wasn't far off from a 20-20 campaign. In his rookie season, he fell short on the stolen base end, and then last year, Espinosa delivered 20 steals but only 17 home runs. Those two categories went a long way toward making Espinosa a top 12 second baseman in standard Rotisserie and Head-to-Head formats, but there were signs a repeat of that ranking might be in danger. Espinosa has never been an especially choosy hitter, but his plate discipline took a turn for the worse as he swung at more pitches, particularly those outside the strike zone. More strikeouts and less power were by-products of that trend. Because he filled in at shortstop for 34 games last season, Espinosa will have shortstop eligibility in 2013, but with second base being a shallow position, the multi-position eligibility doesn't really add much value. It could be easy for owners to overrate Espinosa due to his positions and 20-20 potential, but if he continues to struggle with pitch recognition his batting average, home runs and stolen bases could all decline. Whether you use him at second base or shortstop, Espinosa is best reserved for the later rounds in standard mixed league drafts.

Year	AB	R	H	HR	RBI	SB	BA	FPTS

2011	573	72	135	21	66	17	0.236	396

[Alex Gonzalez](#), MIL

1B/3B/SS

Alex Gonzalez has been inconsistent in recent years, but he started off the 2012 season as if it was going to be one of his better years. One month in from opening day, Gonzalez had a .259/.326/.457 slash line that would have put him on pace for one of his best seasons, but a torn ACL in his right knee put him out

of commission for the rest of the year. For awhile, the Brewers got by with journeymen at shortstop, but they acquired prospect Jean Segura from the Angels in late July, and he was given a starting role within days of arriving. Gonzalez, now a free agent, could return to the Brewers, but if he did, he would likely be Segura's backup. Should he sign on as some team's starting shortstop, he showed early last season that he still has some pop in his bat. He has not been one to hit for average or produce runs consistently, so at best, Gonzalez is an option for owners in league-specific formats.

2011	564	59	136	15	56	2	0.241	289

[Dee Gordon](#), LAD

SS

Turns out Dee Gordon's .352 batting average in September 2011 wasn't a sign of things to come. The free-swinging sophomore speedster was nowhere near as adept with the bat in 2012, instead piling up outs at the top of the lineup. No wonder the Dodgers were so happy to use Hanley Ramirez at shortstop when they acquired him from the Marlins in late July. Of course, when that trade went down, Gordon was on the DL with a torn ligament in his thumb, but the fact the Dodgers didn't return him to the lineup when he returned from the DL in mid-September is telling, as is the fact that they've been shopping him this offseason. Clearly, they have reason to wonder if Gordon has stalled in his development. Nobody questions his speed, of course. He somehow managed to steal 32 bases even though he played in only 87 games and reached base at a pathetic .280 clip. But as the saying goes, he can't steal first base. He did compile a .302 batting average during his minor-league career, which offers some reason for hope, but you'd think he'd have a more advanced approach at the plate by age 24. If Gordon lands a starting gig, his upside is high enough that he'll be draftable in all Fantasy formats, but as a reserve, he's just a steals specialist for Rotisserie leagues.

Year	AB	R	H	HR	RBI	SB	BA	FPTS

2011	224	34	68	0	11	24	0.304	160.5

[Didi Gregorius](#), ARI

SS

Didi Gregorius had a nice September stint with the Reds in 2012, hitting .300 in 20 at-bats over eight games with two RBI. Gregorius, a 23-year-old shortstop who hails from the Netherlands, is a solid defender who was blocked in Cincinnati but now has a shot at being the starter in Arizona, following a December trade to the Diamondbacks. His .265 average across two levels last year was a step back from his .289, .272 and .298 in the previous three seasons, but he did maintain a .324 OPS by upping his walk rate. He may not explode in 2013, but Gregorius will likely have an impact in NL-only formats if he can wrest the job from Cliff Pennington. As of now, he makes for a decent late flyer.

Year	AB	R	H	HR	RBI	SB	BA	FPTS
2013 (proj)	230	23	59	2	23	1	0.257	122
2012	20	1	6	0	2	0	0.300	6.5

[Billy Hamilton](#), CIN

SS

Billy Hamilton didn't spend much time at first base last season. Oh, he got there fine. In fact, his .410 on-base percentage was one of the more underappreciated stats in all the minor leagues. But once he got there, he left there, stealing an obscene 155 bases to set a new minor-league record. His speed has become legendary, complete with stories of him stealing on pitchouts and scoring on pop flies. But unlike other burners throughout history, such as Vince Coleman, Otis Nixon and, more recently, Emilio Bonifacio, he's actually a polished hitter as well. He'll take a walk. He'll split the gap. He'll get the full benefit of his speed instead of just using it to scare defenses (though he'll scare his share of defenses). Even though Hamilton has played only 50 games above Class A, he has grown so much as a hitter that the Reds might award him a job out of spring training. He would play center field, not shortstop -- supposedly to prevent wear and tear -- but because that transition didn't happen until the fall, he'll remain eligible at shortstop for one more glorious year. Even if he doesn't hit right away, Hamilton's speed at that position will make him worth stashing in Fantasy from the outset of 2013.

Year	AB	R	H	HR	RBI	SB	BA	FPTS
2013 (proj)	110	21	29	0	11	25	0.264	113.5

[Josh Harrison](#), PIT

2B/SS

Josh Harrison served as a super utility man for the Pirates last season, but did not do a whole lot with the bat. He hit just .233 with three homers and 16 RBI while stealing seven bases in 249 at-bats. Harrison batted .272 with a .374 slugging percentage during his call-up in 2011, however, so he could still have some upside. His versatility gives him some low-end appeal in Fantasy but without the offense and playing time to back it up, plan on ignoring the 25-year-old in all but the deepest of NL-only formats in 2013.

Year	AB	R	H	HR	RBI	SB	BA	FPTS
2013 (proj)	222	28	56	2	16	6	0.252	126
2012	249	34	58	3	16	7	0.233	145.5
2011	195	21	53	1	16	4	0.272	108

[Brent Lillibridge](#), CHC

1B/2B/OF/SS

Brent Lillibridge played for three teams in 2012, hitting .250 with three home runs and 13 steals in 190 at-bats. While he shouldn't be a draft pick this season, it's worth keeping track of his situation, as Lillibridge has two straight seasons of 10 or more steals despite not cracking 200 at-bats either year. For a single-league team in need of a band-aid because of injury or demotion, Lillibridge is at least a decent source of speed as a short-term plug-in off the waiver wire.

Year	AB	R	H	HR	RBI	SB	BA	FPTS
2013 (proj)	158	27	35	6	18	9	0.222	101

[Cliff Pennington](#), ARI

2B/SS

When Cliff Pennington was dealt to the Diamondbacks this offseason, the part of the trade that sent Chris Young to Oakland was what drew the most attention. Given that Pennington owns a career .249 batting average with just 24 home runs over 525 games, Fantasy owners would have to look hard to find something to get excited about. Once a stolen base threat, Pennington hasn't nabbed more than 15 bags in either of the last two seasons. However, there is one trend that should give owners some mild optimism. Pennington hit all six of

his home runs on the road last season, and in his three years as a full-timer, 15 of his 20 homers have come away from O.co Coliseum. While this won't make him viable in standard mixed leagues, the potential for Pennington to reach double digits in homers and steals -- now that he gets to play his home games at Chase Field -- elevates his value among shortstops in deeper mixed leagues, as well as in NL-only leagues.

[Hanley Ramirez](#), LAD

3B/SS

An incredible five-year run in Miami came to an unceremonious end midway through 2012, when the Marlins shipped Hanley Ramirez to the Dodgers. At the time, Ramirez was hitting only .246, making his personality flaws a bit harder to overlook, especially coming on the heels of an injury-plagued 2011 in which he hit only .243. Unfortunately, he didn't reverse course with the Dodgers, finishing well short of the .300 mark he used to achieve so easily. A couple positives did come from Ramirez's move to Los Angeles, though. It allowed him to play shortstop again, meaning he retains eligibility at the weakest position in Fantasy. It also put him in a star-studded lineup, giving opposing pitchers no choice but to pitch to him. Still, given the recent downward trend and the lingering questions about his work ethic, Ramirez probably isn't going to get back to get to being the best player in Fantasy. A 20-20 shortstop is hard enough to find that he may still go off the board as early as Round 2 or 3, but at this stage of his career, he's probably closer to dropping behind Ben Zobrist that leapfrogging Troy Tulowitzki and Jose Reyes at the position.

[Jimmy Rollins](#), PHI

SS

If there is one common thread with the Phillies' offensive superstars (Jimmy Rollins, Chase Utley and Ryan Howard), it is this: we need to throw their batting average out the window, because there's no use in trying to predict if they're going to hit .280 or .250. Look, for instance, at Rollins: a career .270 hitter, his last three seasons have averages of .243, .268 and .250. But you never got Rollins for his average. In 2012, Rollins hit the most home runs (23) since his 2007 MVP campaign. And he continued his streak of stealing 30 bases in every season with 550 or more at-bats. While it's logical to think Rollins may slow down a bit with his speed and power as he enters 2013 at age 34, keep in mind Rollins had to essentially carry the team on his back while Utley (returned on June 27) and Howard (returned on July 6) were rehabbing injuries. From Howard's return forward -- in 75 games -- Rollins hit 15 home runs, scored 54 times and stole 16 bases. With the two big bats back in the mix, Rollins should equalize any age-related drop-off with a better lineup behind him. He will be drafted in the early rounds of most leagues.

2011	567	87	152	16	63	30	0.268	459.5

[Josh Rutledge](#), COL

2B/SS

Josh Rutledge's prospect status soared in 2011, when he blistered California League pitching for a .346 batting average. Last season, he proved that his performance was not just the by-product of playing in an extremely hitter-friendly circuit, as he hit .306 with 13 home runs in 87 Texas League games. A groin injury to shortstop Troy Tulowitzki ultimately forced Rutledge to be recalled in mid-July, and he responded by hitting .345 with seven home runs through the end of August. Rutledge's power and ability to make contact waned over the season's final month, raising concerns about whether he can sustain his initial level of production over a full season. With Tulowitzki returning, Rutledge will move over to second base, but with that position being no deeper than shortstop, Rutledge holds significant value, simply because of the potential he has shown. While his late-season swoon and relative inexperience make him a risky pick, he has enough upside to justify a pick in the middle rounds of a standard mixed league draft.

[Marco Scutaro](#), SF

2B/SS

Usually when a player joins the Rockies, Fantasy owners salivate at the thought of the extra-base power that comes with the move. Even for a doubles hitter like Marco Scutaro, a schedule full of home games at Coors Field seems sure to generate a windfall. Things didn't work out that way when Scutaro got to Denver. Through late July, he was batting .271 with four home runs and 16 doubles. In a strange twist, it took a trade to pitcher-friendly San Francisco for Scutaro's season to take off. As the Giants' regular second baseman, Scutaro struck out just 14 times in 243 at-bats, hitting .362 with three home runs and 16 doubles -- basically the same power output he had in Colorado, but in less than two-third of the at-bats. He will reprise his role as the Giants' second baseman in 2013, as he signed a three-year, \$20 million deal with the team this offseason. Though he is extremely unlikely to replicate his late season performance, which included a .328 postseason batting average, he should be more productive than he was during his Rockies stint. Be careful not to overvalue Scutaro on Draft Day due to his late-season hot streak, but he is still a good option in the late rounds of standard mixed league drafts.

2011	395	59	118	7	54	4	0.299	307

[Jean Segura](#), MIL

SS

Just before the July 31 trade deadline, the Angels shipped Jean Segura -- one of their top prospects -- to the Brewers as part of the price for acquiring Zack Greinke. Segura had never played above the Double-A level, but it took the Brewers less than two weeks to install him as their regular shortstop. It didn't go especially well for Segura in Milwaukee, as he hit .264 with seven extra-base hits (no homers) in 163 at-bats. He still has the potential to hit for a higher average, but Segura has already delivered in the stolen base category, swiping seven bags in eight attempts over the season's final two months. He will resume his role as the Brewers' starting shortstop in 2013, but owners shouldn't expect him to show the moderate power and higher batting averages that he displayed in the minors. Though Segura will be a bargain if he develops quickly, it's best not to trust him with a draft pick outside of deeper mixed leagues and NL-only formats.

2013 (proj)	500	65	133	4	44	39	0.266	344.5
2012	151	19	39	0	14	7	0.258	96.5

[Andrelton Simmons](#), ATL

SS

After losing the starting shortstop job to fellow rookie Tyler Pastornicky in spring training, Andrelton Simmons quickly convinced the Braves they had made the wrong choice and was starting in the big leagues by June 2. He got off to a hot start, too, batting .333 with an .887 OPS after a month. Unfortunately, he broke his pinkie about a week later and missed the next two months. Health wasn't the only area in which Simmons fell short as a rookie. In addition to his high contact

rate, his base-stealing ability was supposed to be what set him apart in Fantasy, and yet he attempted just one stolen base in 49 games. After losing Michael Bourn in the offseason, the Braves toyed with the idea of making Simmons their leadoff hitter, so they must feel like he's capable of making an impact on the base paths. Given his lack of power, he'll need to get the green light more often to make a significant impact in Fantasy. Right now, Simmons' greatest asset is bat control, which is more valuable in real life than in Fantasy, so unless your league uses a middle infield spot, you don't much incentive to draft him. He'll likely enter the Elvis Andrus and Asdrubal Cabrera class of shortstops as he matures, but right now, he's a rung down the ladder.

Year	AB	R	H	HR	RBI	SB	BA	FPTS
2013 (proj)	500	65	144	9	59	15	0.288	363.5
2012	166	17	48	3	19	1	0.289	109.5

[Ruben Tejada](#), NYM

SS

Ruben Tejada made some progress as an option in Fantasy last season but continued to show minimal pop. He was still able to hit for average, however, as he batted .305 in his first 27 games before going on the DL due to a quad injury. Tejada would return in late June and finished the year hitting .289 with one home run and 25 RBI. While his .351 slugging percentage was 20 points above his career mark, Tejada has just two home runs in 288 career games in the majors. The 23-year-old is an above-average defender with plenty of room to grow but leave him for NL-only formats on Draft Day.

Year	AB	R	H	HR	RBI	SB	BA	FPTS

2011	328	31	93	0	36	5	0.284	202

[Troy Tulowitzki](#), COL

SS

Troy Tulowitzki has had struggles with staying healthy over his career, but health woes played a bigger role for him than usual in 2012. He missed the last four months of the season due to a groin injury and subsequent surgery, so Tulowitzki's season ended after only 47 games. For the portion of the schedule he did play, Tulowitzki's production was not quite up to his norm, as he hit .287 with eight home runs, but only eight doubles and two stolen bases. Given that the seven-year veteran is expected to be ready for spring training and that his dropoff was mild and over a short time period, there is no reason to think of him as anything less than the best shortstop in Fantasy. No other player at the position has the consistent track record of high batting averages, 30-plus home run power and run production that Tulowitzki has. He is still a legitimate first-round pick in all formats.

2011	537	81	162	30	105	9	0.302	516.5

[Wilson Valdez](#), MIA

2B/SS

Free agent infielder Wilson Valdez has seen his production -- and at-bats -- slowly slip every year since 2010. Last season, Valdez hit .206 with four doubles and three steals in 194 at-bats. Just two seasons ago, he was hitting .256 with four home runs and seven steals. Valdez is a utility/bench player who won't see enough at-bats to make a Fantasy impact. His ceiling, even in an optimal situation, isn't worth a pick on Draft Day.

Outfielder

[Norichika Aoki](#), MIL

When the Brewers signed Norichika Aoki to a two-year deal last January, it was not clear where the former Yakult Swallow would fit in with his new club. Particularly once Ryan Braun had his 50-game drug suspension overturned, it appeared that Aoki would struggle to get playing time. A season-ending knee injury to Mat Gamel changed all that, as Aoki eventually took over for Corey Hart in right field, while Hart replaced Gamel at first base. Once installed in the lineup, Aoki didn't give manager Ron Roenicke any reason to remove him, as he hit .288 with 10 home runs, 81 runs, 50 RBI and 30 stolen bases. Aoki will begin the 2013 season as a known quantity with a known role, serving as the Brewers' leadoff hitter. His penchant for stealing bases and scoring runs will give him value in Rotisserie leagues, while his aversion to strikeouts makes him an attractive option in Head-to-Head formats. Regardless of format, owners in standard mixed leagues should target the 31-year-old in the latter portions of the middle rounds.

Year	AB	R	H	HR	RBI	SB	BA	FPTS
2013 (proj)	545	85	159	9	54	33	0.292	447.5
2012	520	81	150	10	50	30	0.288	436.5

[Carlos Beltran](#), STL

If Carlos Beltran's triumphant return from knee surgery in 2011 was uplifting, then his follow-up in 2012 was an absolute joyride. Or was it? See, even though his 32 homers represented the most he's had in a season since 2007, his .269 batting average and .842 OPS were significant steps back from his .300 and .910 marks in 2011. And though he seemingly stayed healthier in 2012, he played in only nine more games. In fact, his 151-game slate may have been the worst thing that happened to him. He was about in line with his 2011 percentages at the All-Star break, but in the second half, he hit only .236 with a .742 OPS, including .224 and .667 over his final 44 games. The hand, back and knee injuries he battled during that stretch are of course largely to blame, but in his age-36 season, they'll continue to be the norm for him. Beltran's best chance of continuing to produce at an elite rate in 2013 would be a reduction in playing time, but if the Cardinals elect to go that route, his totals will suffer. One way or another, he figures to take a step back this season, so don't be surprised if he falls outside the top 30 outfielders on Draft Day.

Year	AB	R	H	HR	RBI	SB	BA	FPTS
2013 (proj)	510	74	133	26	83	10	0.261	423.5
2012	547	83	147	32	97	13	0.269	476
2011	520	78	156	22	84	4	0.300	471

[Roger Bernadina](#), WAS

Coming up through the minors, Roger Bernadina showed that he could produce high batting averages and on-base percentages, yet whenever the Nationals would give him a chance to show his stuff, he would give them reasons to bench or demote him. Bernadina only started 48 games in 2012, but when he did play, he finally put up the kinds of numbers that he appeared to be capable of. In 261 plate appearances, Bernadina hit .291 with a .372 on-base percentage and 15 stolen bases. Bernadina's shot at being a starting outfielder has probably passed him by, but because he can still help with stolen bases in a part-time role, he has some appeal for Rotisserie owners. Particularly in those formats, Bernadina can be targeted in NL-only leagues and possibly some very deep mixed leagues.

Year	AB	R	H	HR	RBI	SB	BA	FPTS

2011	309	40	75	7	27	17	0.243	204.5

[Gregor Blanco](#), SF

Spring training stats don't usually mean much, but an exceptionally good spring can provide an opportunity for a previously-ignored player to earn a roster spot. This was the case for Gregor Blanco in 2012, as he parlayed a .333 Cactus League batting average and 13 steals into his first chance at regular playing time in four years. Only in Blanco's 2008 rookie season with the Braves did he make more than the 453 plate appearances he received with the Giants last season. Blanco made good on his stolen base potential, delivering 26 swipes in 32 attempts. Through June 9, Blanco followed up his spring performance with

more hot hitting, as he batted .291 with 10 doubles, three triples and three home runs. Over the rest of the season, Blanco's production faded, as line drives turned into grounders, and he hit .216 with eight extra-base hits. Despite the poor finish, Blanco could fill the hole in left field left by Melky Cabrera's departure for Toronto, as he provides a strong defensive presence. With playing time, Blanco could offer another 20-plus stolen base season. He may not give Fantasy owners much else, but the steals make him relevant in deeper Rotisserie formats.

Year	AB	R	H	HR	RBI	SB	BA	FPTS
2013 (proj)	210	29	55	2	16	12	0.262	142.5
2012	393	56	96	5	34	26	0.244	272

[Brian Bogusevic](#), CHC

Brian Bogusevic saw the most playing time of his career for the Astros last season, but struggled at the plate after an impressive callup in 2011. He batted just .203 with seven home runs and 28 RBI in 355 at-bats and posted a lowly .299 slugging percentage. While he was able to make 83 starts a year ago, Houston has a crowded outfield entering this season so the 28-year-old will have to compete for playing time during the spring. Bogusevic poses minimal appeal in Fantasy even if he wins a starting job so plan on ignoring him in the majority of formats on Draft Day.

Year	AB	R	H	HR	RBI	SB	BA	FPTS
2013 (proj)	182	22	42	4	15	7	0.231	109.5
2012	355	39	72	7	28	15	0.203	199
2011	164	22	47	4	15	4	0.287	114

[Ryan Braun](#), MIL

A year ago, Braun appeared to be facing a 50-game drug suspension, and Fantasy owners were facing a dilemma over how to approach the slugger on draft day. In February, Braun's suspension was overturned, and he went on to have a typically productive season, finishing second in the National League Most Valuable Player voting. From a power perspective, Braun outdid his 2011 MVP performance, hitting a career-high 41 home runs. He also eclipsed a .300 average and 100 runs for the fourth straight season, and it was his fifth year in a row with more than 100 RBI. If that wasn't enough, he also produced his second consecutive season with 30-plus stolen bases. That combination of elite-level numbers is what makes Braun arguably the most valuable outfielder in Fantasy. He remains someone to target early in the first round.

2011	563	109	187	33	111	33	0.332	632.5

[Domonic Brown](#), PHI

After deadline deals that sent Hunter Pence and Shane Victorino packing, a spot in the outfield opened up, once again, for former top prospect Domonic Brown. The result? Nearly identical numbers from the early season 2011 experiment that had the Phillies sending Brown back to the minors. In 187 at-bats (compared to 184 in 2011), Brown's batting average was actually lower (.235/.245), he hit the same amount of home runs (five), had one more double, one more triple, drove in seven more runs and scored seven fewer. There aren't any splits to speak of that would point to Brown either figuring something out or tailspinning at the end -- he was pretty steady at these numbers from his recall until the end of the season. We know Brown has talent -- he was *Baseball America's* No. 4 prospect before 2011 and has a career .296 average in the minors -- but he's been remarkably consistent in two stints in the majors. He could end up figuring things out on the job in 2013, but it might be a little optimistic to expect him to produce that 20-20 potential based on what he's done so far in the majors. He's a late-round draft pick in NL-only formats.

Year	AB	R	H	HR	RBI	SB	BA	FPTS
2013 (proj)	500	68	132	15	70	9	0.264	384
2012	187	21	44	5	26	0	0.235	127
2011	184	28	45	5	19	3	0.245	131.5

Jay Bruce, CIN

OF

Jay Bruce set a career high in home runs in 2012 with 34. This broke his previous high of 32, set in 2011. He also set career highs in doubles (35), RBI (99) and steals (nine). In short, the 25 year-old, just now entering his prime, is becoming a dangerous weapon in Fantasy. His average may be the only part of his game that would-be owners could nit-pick, but all things considered, .255 isn't that bad. And it could be lower, considering the averages of other players with 40 home run potential. Bruce may be a bit inconsistent for head-to-head players, who got some weeks of boom or bust from him, but his final numbers make him an elite outfield option and should have him off the board in the early rounds of 2013 drafts.

2013 (proj)	555	95	148	37	105	8	0.267	497
2012	560	89	141	34	99	9	0.252	479.5
2011	585	84	150	32	97	8	0.256	464

Tony Campana, ARI

OF

Tony Campana continued to show blazing speed for the Cubs in 2012, but struggles at the plate hindered his appeal in Fantasy once again. He batted .264 with 30 stolen bases and 26 runs scored in 89 games in the majors but also spent some times in the minors. Campana started just 38 games in Chicago and slugged a porous .299 while getting on base at a .308 clip. The 26-year-old would be an attractive option in Rotisserie formats if he's able to earn more playing time in 2013. But with the Cubs' outfield looking full, a future as a reserve/pinch-runner role once again appears to be in the cards. Leave Campana for deeper NL-only and some Rotisserie formats on Draft Day.

Matt Carpenter, STL

1B/2B/3B/OF

Nobody expected much from Matt Carpenter when he made the Cardinals out of spring training last year. Overshadowed by Matt Adams and Zack Cox in the minor-league system, he wasn't as much a building block for the future as a 26-year-old who had nowhere else to go. But beginning the first week of the season, when he filled in for an injured Lance Berkman, Carpenter showed the Cardinals he had a bat worth keeping him in the lineup. And they found creative ways to get it there, letting him spell an injury-prone David Freese or fill in for a banged-up Carlos Beltran from time to time. They even gave him a couple starts at second base and liked his performance there enough to give him an extended look at the position this spring. Of course, top prospect Kolten Wong will eventually claim second base, but among the candidates currently deemed major league-ready, Carpenter certainly offers the most offensively. With a good on-base percentage and doubles and triples pop, he would have genuine mixed-league appeal if he won a starting job. It's too much of a long shot for you to target him outside of NL-only formats, though.

Year	AB	R	H	HR	RBI	SB	BA	FPTS

2011	15	0	1	0	0	0	0.067	4

Shin-Soo Choo, CIN

OF

Reds outfielder Shin-Soo Choo had a decent -- but not great -- bounce-back year from an injury-ravaged 2011, in which he only played 85 games. Choo hit .283 with 16 home runs and tied a career-high with 21 steals in 2012. While his power numbers and average weren't back up to his 2008-2010 levels, it was encouraging to see Choo not get stuck in a rut after a disappointing (when he played) 2011. Choo, who was traded to the Reds in a December three-team deal, projects as the starter in center field for Cincinnati and will likely hit leadoff, a role he excelled in last season (a .310 average and .881 OPS, with 12 home runs in 400 leadoff at-bats). Expect a jump in power (smaller home stadium) and runs scored -- Joey Votto, Ryan Ludwick, Jay Bruce and Brandon Phillips hitting behind him all make for a huge upgrade over his Cleveland counterparts. This should all add up to a solid average and a 25/20 season for Choo. He'll likely go early in the middle rounds in most drafts.

Tyler Colvin, COL

1B/OF

Tyler Colvin surprised many Fantasy owners with his 20-homer rookie season in 2010, but just as quickly as he earned attention, he fell into obscurity just a year later. Coming back from a collapse lung, he hit just .150 in 2011, so expectations were low when Colvin came over to the Rockies last offseason. He took full advantage of Coors Field, hitting 11 of his 18 home runs there and batting .338 (as opposed to .244 on the road). Colvin logged 136 games, making at least 30 appearances at first base, center field and right field. He should get a healthy amount of playing time at those positions again in 2013, so even without an everyday job, Colvin should produce enough to be worth a pick in deeper mixed leagues.

Collin Cowgill, NYM

OF

Heading into 2013 with his third team in three seasons, Collin Cowgill returns to the National League with the Mets after getting traded from the Diamondbacks to the Athletics last offseason. In his first two seasons as a big leaguer, Cowgill actually spent more time at Triple-A than in the majors, and he failed to help Fantasy owners much with stolen bases, even though he showed off his speed in the minors. All three of the Mets' projected starting outfielders -- Lucas Duda, Kirk Nieuwenhuis and Mike Baxter -- are lefties, so the right-handed Cowgill should get plenty of at-bats against southpaws. Perhaps this is the season that he can hit double digits in stolen bases, but even if he does, Cowgill probably won't do much else to aid Fantasy owners. He is strictly an option for NL-only leagues.

Allen Craig, STL

1B/OF

Chances are Allen Craig wasn't drafted in your Fantasy league last year. At the time, he was recovering from offseason knee surgery and didn't have an everyday job waiting for him. When he did finally return as an injury replacement for Lance Berkman on May 1, he wound up hitting .404 (19 for 47) with five homers in his first 12 games. With that, his playing time was no longer in question. Perhaps it shouldn't have been in the first place. At every other stage of his professional career -- be it as a minor-leaguer, a part-timer during the 2011 season or an injury replacement during the 2011 postseason -- Craig proved capable of hitting .300 with a .900 OPS. So why wouldn't it translate to full-time duty? Now that he's proven it does, having maintained a batting average right around .300 for the final five months of 2012, a starting job -- whether at first base or the outfield -- is Craig's for the foreseeable future. He may not have much room to improve at age 28, but considering he averaged more Head-to-Head points per game than high-profile teammate Matt Holliday last year, he's worthy of an early round pick just as he is.

Carl Crawford, LAD**OF**

The Perfect Storm continued to be a perfect mess for the Red Sox in 2012, following up his discouraging first season in Boston with a truncated second season that culminated in Tommy John surgery. His elbow was messed up from the beginning, so you can't glean too much from his numbers. He was also recovering from wrist surgery to start out the year, so clearly he wasn't all together physically. But now, it's been two years since we've seen Crawford deliver big-time Fantasy numbers. He's 31, and speed -- his greatest strength -- is an attribute doesn't age well. He'll get a fresh start in Los Angeles after getting traded to the Dodgers while he was recovering from Tommy John last season, and maybe just leaving the pressure cooker of Boston will allow him to relax and get back to playing the way he did in Tampa Bay. But clearly, he's a risk in Fantasy, because of both his declining health and his diminished production. Given his elite pedigree, he'll be worth a flier in the middle rounds of mixed-league drafts, but you'll want to keep your expectations for Crawford in check.

Year	AB	R	H	HR	RBI	SB	BA	FPTS
2013 (proj)	560	89	158	15	74	24	0.282	441

2011	506	65	129	11	56	18	0.255	330

Michael Cuddyer, COL**1B/OF**

After struggling to hit for power in his two seasons at Target Field, Michael Cuddyer left the Twins for a three-year, \$31.5 million deal with the Rockies. Coors Field went a long way towards helping Cuddyer to revive his career, as he slugged .489 for his highest mark since playing his home games in the Metrodome. He certainly enjoyed an assist from his home park, as his slugging percentage was .515 at home. Unfortunately, those stats were compiled through just 101 games, as Cuddyer missed almost all of the season's final two months due to an oblique injury. He is set to return for spring training, and as long as he remains with Colorado, he will have value for owners in standard mixed leagues. Even with the potential for 25 to 30 homers, Cuddyer remains a late-round option, as he provides only modest help with batting average and stolen bases.

Year	AB	R	H	HR	RBI	SB	BA	FPTS
2013 (proj)	510	78	133	21	80	6	0.261	412
2012	358	53	93	16	58	8	0.260	292
2011	529	70	150	20	70	11	0.284	408.5

David DeJesus, CHC**OF**

David DeJesus played in the National League for the first time in his career during 2012 after signing a two-year, \$10 million deal with the Cubs. He continued to show minimal pop for an outfielder as he hit just two home runs before the All-Star break while batting .271 with a .359 on-base percentage. He picked things up in the second half and finished the year with a .263 average, nine homers, 50 RBI and seven stolen bases. His ability to get on base at a decent clip will likely lead to the 32-year-old batting near the top of the lineup again in 2013 and DeJesus has the intangibles that fit well in the National League. Since he is a light-hitting outfielder, however, leave DeJesus for NL-only formats on Draft Day.

Year	AB	R	H	HR	RBI	SB	BA	FPTS
2013 (proj)	510	71	136	8	48	3	0.267	324.5

2011	442	60	106	10	46	4	0.240	290

Chris Denorfia, SD**OF**

If you project his numbers from the last three years over a full season of at-bats, Chris Denorfia is the kind of 15-homer, 20-steal player that would make a nice addition to any roster late in a mixed-league Rotisserie draft. Unfortunately, at age 32, he doesn't have much hope of expanding his role from platoon player. Given his splits, it's probably for the best. He destroyed lefties to the tune of a .337 batting average and .890 OPS, but when he got a chance to hit against righties -- usually because Carlos Quentin's knees were acting up -- he hit only .247 with a .697 OPS. Still, Denorfia will do enough with his 300 at-bats that he's draftable in deeper NL-only leagues that require the use of five outfielders. Just understand that he won't do anything to improve his stock.

Year	AB	R	H	HR	RBI	SB	BA	FPTS
2013 (proj)	313	45	88	7	30	11	0.281	224.5
2012	348	56	102	8	36	13	0.293	273
2011	307	38	85	5	19	11	0.277	194.5

Greg Dobbs, MIA**1B/3B/OF**

Aside from Hanley Ramirez's half-season at the hot corner, the Marlins have had problems finding a regular third baseman over the last two years, but Greg Dobbs has received 114 starts at the position over that span. The Marlins signed Placido Polanco this offseason, so starts will probably be harder to come by for Dobbs in 2013. Even as a starter, Dobbs has limited appeal for Fantasy, as he has lost some of the home run thump he showed when he was with the Phillies. Dobbs still has gap power, so he can produce a decent batting average, but that's about all that Fantasy owners can count on. Only consider drafting Dobbs in deeper NL-only leagues.

Year	AB	R	H	HR	RBI	SB	BA	FPTS
2013 (proj)	298	26	79	6	34	2	0.265	163

2011	411	38	113	8	49	0	0.275	228.5

Lucas Duda, NYM**OF**

Lucas Duda looked to be on the verge of becoming a viable option in Fantasy after hitting .292 with a .482 slugging percentage over 100 games in 2011, but he took a huge step back last season. After breaking camp as the starting right fielder for the Mets, he batted .269 with 11 home runs and 42 RBI in his first 70 games before his numbers fell off dramatically. He had a .241 average with a .391 slugging percentage when he was shipped to Triple-A Buffalo in July to work things out. Duda showed signs of improvement down on the farm but his struggles continued after being recalled in late August. The 27-year-old underwent surgery to repair a broken right wrist after suffering the injury during the offseason but is expected to be fine for the start of spring training. Unless the Mets bring on someone else, Duda will compete to be the starting left fielder during camp and should benefit from the fences coming in at Citi Field. Duda could be a nice bounce-back candidate for 2013 and has the power to make the difference in Fantasy. You wouldn't want to reach for him, but you could do worse than spending a late-round pick on him.

Year	AB	R	H	HR	RBI	SB	BA	FPTS

2011	301	38	88	10	50	1	0.292	246.5

Adam Eaton, ARI**OF**

Adam Eaton got his chance to shine over the last month of the 2012 season when it was apparent Chris Young was going to be out for a good deal of time, and, even though he slowed down toward the end of the season, he proved he could play in the majors. Eaton hit .259 with two home runs, two steals and three doubles over 85 at-bats. This was enough to earn him the starting center field job for 2013, as Arizona sent Young packing to Oakland. What's Eaton's ceiling? Probably a .310 average (he hit .355 in 1,210 minor league at-bats) with seven home runs, 30 doubles and 35 steals. He could be the N.L. Rookie of the Year but doesn't have a lot of hype heading into the season, making Eaton, possibly a late round steal, a nice sleeper candidate in mixed leagues.

[Andre Ethier](#), LAD

Judging by his final numbers last year, Andre Ethier appeared to bounce back from a disappointing 2011 in which a knee injury sapped him of his power. But if you owned him in Fantasy, you probably came away disappointed. That's because 11 of his 20 homers came in April and September, leaving only nine for that four-month period in the middle, when the contenders separate themselves from the pretenders in Head-to-Head leagues. He was the Fantasy equivalent of fool's gold, coming in a bright, shiny package but delivering little actual value. So was it an isolated event? Judging by his recent track record, not really. In terms of perception, he's basically been living off his 31-homer, 106-RBI season in 2009. He hasn't had more than 23 homers or 89 RBI in a season since then. Given the letdown of his "rebound" season, though, the perception appears to be changing. Once an assured top-20 outfielder on Draft Day, Ethier is liable to drop outside the top 30 now that Fantasy owners are beginning to realize he doesn't bring much more to the table than 20-plus homers and 30-plus doubles. That player still has value, of course, but he's in a lower tier, belonging more with Nick Swisher than, say, Shin-Soo Choo.

Year	AB	R	H	HR	RBI	SB	BA	FPTS

2011	487	67	142	11	62	0	0.292	342.5

[Dexter Fowler](#), COL

Dexter Fowler had been something of a frustration for Fantasy owners over his first three full seasons in the Rockies' outfield. His ability to leg out infield hits and pile up triples attested to his speed, but he hadn't been able to deliver stolen bases consistently. He plays home games at Coors Field, but he would provide only a handful of homers. And despite high batting averages on balls in play, Fowler's overall batting average was mired in the .260s due to frequent strikeouts. Last season, Fowler shook off some of these annoying trends. He provided just a dozen steals, but he used his speed and gap power to produce a .393 BABIP and .300 overall batting average. He also showed his first signs of some home run power, launching a career-high 13 bombs. It's unlikely that Fowler will hit .300 or higher again this season unless he can reduce his strikeouts, and he doesn't help enough with homers or steals to be worth pursuing in mixed Rotisserie leagues prior to the late rounds. However, because Fowler can be relied on for triples and walks, owners can target him in the middle rounds of mixed Head-to-Head league drafts.

2011	481	84	128	5	45	12	0.266	361

[Carlos Gomez](#), MIL

Carlos Gomez appeared to have a breakout season in 2012, and Fantasy owners long accustomed to Gomez falling short of expectations were likely taken by surprise. Actually, the seeds of the breakout were sown one year before, but he played in just 94 games due to a broken collarbone and spending time in a platoon role. In 2011, Gomez hit eight home runs in that limited playing time, but he carried over and sustained his newfound power throughout the whole '12 season. By the season's midpoint, Gomez was no longer a part-time option, as he had earned regular playing time, and he hit even better as a regular. Not coincidentally, Gomez has been much less of ground ball hitter over the last two years, so there is good reason to think that he will continue to hit for power as he heads into the 2013 season as the Brewers' everyday center fielder. With regular at-bats also comes the potential for another 30-plus stolen base season, so despite a low batting average, Gomez has appeal for owners in Rotisserie leagues. While he is more of a late-round option in points leagues, owners in Rotisserie formats can target Gomez in the middle rounds.

2011	231	37	52	8	24	16	0.225	169

[Carlos Gonzalez](#), COL

Carlos Gonzalez has played two full seasons since his breakout year of 2010,

OF

when he looked like someone who would rank among the outfield elite in Fantasy for years to come. Since then, he has established himself as a perennial 20-20 threat and a legitimate .300 hitter. However, the power that gave Gonzalez the look of a potential MVP has dissipated, as he has been more of a line drive and ground ball hitter over the last two years. Perhaps a succession of injuries has taken its toll or maybe a conscious approach to hit the other way has robbed him of some home run power. Then again, as a 27-year-old, Gonzalez may not be done with his development, and 2013 could be the year where he blends the more patient approach he's been building the last two seasons with the raw power he showed in his breakout year. Because of his history of injuries and the uncertainty around his career's trajectory, Gonzalez is not a good use of a first-round pick. However, with the pool of true elite outfielders being small, owners can still look to take him in the very early rounds.

2011	481	92	142	26	92	20	0.295	474.5

[Jerry Hairston](#), LAD

2B/3B/OF

Jerry Hairston filled the role of utility player admirably last year, starting at three different positions (four if you count DH) for the Dodgers. That said, he was more of an able body than a trend setter when in the lineup. At age 36, he doesn't run much anymore, and he was never the power hitter his brother is. If Luis Cruz falters at third base and Hairston ends up being the one to replace him, the journeyman will be worth owning in NL-only leagues just for the at-bats. Understand that the majority of those at-bats will be hollow, though.

Year	AB	R	H	HR	RBI	SB	BA	FPTS

2011	337	43	91	5	31	3	0.270	222

[Bryce Harper](#), WAS

OF

After quick and less-than-impressive stints in Double-A and Triple-A, Bryce Harper made his major league debut with the Nationals late last April at age 19. Given his struggles in the upper minors, many expected Harper to fall flat in his first exposure to big league pitching. Instead, Harper got off to a fast start, batting .307 with seven home runs in his first 40 games, earning a spot on the National League All-Star team. He did suffer something of a midseason swoon, but he finished strong and captured the NL Rookie of the Year award. Though Harper's final batting average was a middling .270, his 22 home runs, 18 stolen bases and 98 runs produced in five months were nothing short of incredible for a player who didn't turn 20 until October. In an abbreviated season, Harper was a top 30 outfielder in standard Rotisserie and Head-to-Head formats. Even if you consider the possibility of a sophomore slump, you can pencil Harper into your top 30 again for 2013 -- and that could wind up being a very conservative ranking.

Year	AB	R	H	HR	RBI	SB	BA	FPTS

2011	0	0	0	0	0	0	0.000	0

[Corey Hart](#), MIL

Corey Hart moved to a new position in 2012, but at the plate, very little had changed from the previous two seasons. Mat Gamel tore the ACL in his right knee one month into the season, and that necessitated Hart's move from the outfield to first base. He responded by posting his second 30-homer season and tying a career high with 91 runs scored, and he finished among the top 10 first basemen in standard Rotisserie and Head-to-Head formats. Aside from a slight uptick in strikeouts and a corresponding dip in batting average, Hart has been a beacon of consistency since 2010, and at age 31, he could keep this pace up for at least another year or two. Though he will remain at first base, Hart got more than enough playing time in at right field to be outfield-eligible for 2013. That will help his value a little, but because he may need knee surgery and could miss up to six weeks of the season, wait until the middle rounds of standard mixed league drafts to take Hart.

Year	AB	R	H	HR	RBI	SB	BA	FPTS
2013 (proj)	410	68	110	22	62	5	0.268	326
2012	562	91	152	30	83	5	0.270	448.5
2011	492	80	140	26	63	7	0.285	400

[Chris Heisey](#), CIN

Chris Heisey failed to carry the momentum of his 18 home run season (in 279 at-bats) in 2011 over to 2012, but he still managed a respectable .265 average with seven homers and six steals in 347 at-bats. With Ryan Ludwick returning to Cincinnati and Shin Soo-Choo coming over via trade, the future looks rather grim for the 28-year-old. Heisey could have been a nice sleeper option for the Reds in left field, but is now little more than a reserve round flyer and lots of finger crossing (that he either gets traded or someone in the outfield gets injured) in NL-only leagues. He had decent power and speed in the minors, while carrying a nice average, and his half-season of stats in 2011 and 2012 project to a decent Chris Young-type player. Heisey's value lies in his situation and, right now, his situation is less than appealing.

Year	AB	R	H	HR	RBI	SB	BA	FPTS

2011	279	44	71	18	50	6	0.254	226

[Jason Heyward](#), ATL

And with that, the Braves front office can breathe a sigh of relief. Long-term keeper owners are free to exhale as well. Jason Heyward -- who after an impressive showing as a rookie in 2010 fell flat on his face in 2011 -- came roaring back with his first ever 20-20 campaign in 2012. Most likely, no one variable was completely responsible for the turnaround, but improved health was probably the biggest factor. Heyward played almost all of 2011 with numbness in his right shoulder, and it altered his swing, leading to a disproportionate number of pop-ups and grounders. Not only were those rates back to normal in 2012, but Heyward's line drive rate was up as well, meaning he's squaring up the ball even better than he did as a rookie. Granted, not everything went right for him in 2012. He fell well short of the freakish number of walks he drew as a rookie, and he struck out 152 times. So basically, he was closer to what you'd expect from a player in his early 20s. Heyward arrived with so much hype in 2010 that he'll have a hard time living up to everyone's expectations in these early stages of his career, but if nothing else, his 2012 confirmed that he's well on his way. With the possibility of another step forward in 2013, he's worth targeting among the top 10 outfielders.

Year	AB	R	H	HR	RBI	SB	BA	FPTS
2013 (proj)	560	88	148	30	90	22	0.264	480.5

2011	396	50	90	14	42	9	0.227	270.5

[Matt Holliday](#), STL

For the first two-thirds of 2012, the general consensus on Matt Holliday was that he's as studly as ever. After all, he had a 43-game stretch during the summer in which he hit .410 with 11 home runs over 161 at-bats, bringing his batting average up to a season-high .324 on Aug. 5. But of course, the season didn't end on Aug. 5. It continued for 52 more games, during which Holliday hit .237 with six home runs in 198 at-bats. So now, Holliday's performance leaves a little

1B/OF

more room for interpretation. On the one hand, he once again ranked among the top outfielders in Fantasy, producing his usual high batting average and 20-plus homers despite having to contend with a lower back issue in September. On the other hand, he's 33, so perhaps that back issue is a sign of things to come. His 132 strikeouts -- a career high and a significant step back from his previous four seasons -- also suggest he's beginning his decline. He has a long way to go, of course, so don't let some late-season slump prevent you from drafting him as a top-10 outfielder. Just understand that Holliday is getting to the point in his career where he's no longer a rock-solid pick in the second or third round.

[Brett Jackson](#), CHC

We should have all seen this coming, right? Brett Jackson, trailed by one glowing scouting report after another, got the call to the majors last August and promptly bombed, batting .175 with a .644 OPS. Of course, you wouldn't expect much more than that from a player who struck out every other at-bat, would you? And really, it was every other at-bat. Of his 120 at-bats, 59 resulted in strikeouts. The most surprising part is that it was a surprise to so many. For all he did well in the minor leagues, one thing Jackson didn't do was make consistent contact. Prior to his callup, he had 158 strikeouts in 407 at-bats for Triple-A Iowa. Clearly, it's a chronic issue, and at age 24, he's probably beyond the point where he'll grow out of it. So, then, can he survive it? Are his tools enough to sustain him if he's giving away that many at-bats? Clearly, the Cubs want to take more time to figure it out, which is why they brought in Nate Schierholtz this offseason. Another mediocre performance in the Pacific Coast League -- where a .256 batting average and .817 OPS are no cause for excitement, really -- could make Jackson an afterthought in Chicago. His proximity to the majors is the main reason he's still worth drafting in NL-only leagues.

[Jon Jay](#), STL

Because he missed about five weeks in the middle of the season with a sore shoulder, the strides Jon Jay made in 2012 might go overlooked in Fantasy. But what started as a platoon role for the 28-year-old outfielder developed into everyday duty in early August, and from that point forward, he hit .321 with a .382 on-base percentage and .810 OPS. Though a high batting average is nothing new for him -- he hasn't hit less than .297 in any of his three major-league seasons -- now that he's proven he can maintain it against left-handers as well as right-handers, he has a much better chance of getting the at-bats he needs to make an impact in Fantasy. And batting leadoff for the Cardinals, those at-bats should translate to plenty of runs scored. He also showed more speed than ever before, more than tripling his career high with 19 stolen bases. Because he lacks home run power, Jay will never be a high-end Fantasy option, but as long as he continues to excel in the same areas he did last year, he's a viable fourth or fifth outfielder. Believe it or not, he actually averaged more Head-to-Head points per game than Hunter Pence, Nelson Cruz and Mark Trumbo last year.

Reed Johnson, ATL

OF

Reed Johnson destroys left-handed pitchers, having hit .311 with an .828 OPS against them over his 10-year career. Not surprisingly, when the Braves acquired him from the Cubs in the Paul Maholm deal last July, they made every effort to get him in the lineup against left-handed pitchers. Most often, it was in left field, allowing Martin Prado to shift to the infield. As the Braves roster currently stands, the plan for Johnson in 2013 is more or less the same. He'll sit against right-handers, but against left-handers, the left-handed hitting Juan Francisco will sit, allowing Prado to shift to third base and Johnson to start in left field. A last-minute acquisition could always change that alignment, but Johnson's opportunities would only shrink in that case. If you target the 36-year-old for batting average help in an NL-only league, understand that he won't give you more than 250 at-bats or so.

Garrett Jones, PIT

1B/OF

Garrett Jones had a bounce-back campaign for the Pirates a year ago thanks to a strong finish. He hit 15 home runs with 49 RBI and a solid .523 slugging percentage in 74 games after the All-Star break and finished the year with a career-high 27 homers and 86 RBI. His on-base percentage dipped slightly from his down 2011 campaign but his jump in slugging percentage from .433 to .516 made a huge difference in his Fantasy value. The 31-year-old has been too inconsistent to trust in the majority of formats so far in his career, but the potential for 30 homers means he remains an intriguing option. Jones stands to see the majority of the playing time at first base in 2013 and is worth targeting in mixed leagues on Draft Day.

2011	423	51	103	16	58	6	0.243	299

Matt Kemp, LAD

OF

Coming off a near-MVP 2011 season in which he finished a homer short of the 40-40 club, Matt Kemp entered 2012 with the lofty goal of a 50-50 campaign and appeared to be on track for at least half that equation when he homered 12 times in April. Unfortunately, he would hit less than that the rest of the way, finishing with a grand total of 23. The turning point came when a tight hamstring forced him to the DL -- not once, but twice -- in May. Between the DL stints, he wound up missing about six weeks and wasn't the same player when he returned, mustering just the 11 homers to go along with a .280 batting average and .792 OPS in 282 at-bats. So much for going 50-50. He didn't even come close on the steals, finishing with nine, which could indicate he's nearing that point, like former 40-steal men Vladimir Guerrero and Alex Rodriguez before him, when his role in the lineup precludes him from being so aggressive on the base paths. Granted, it wouldn't be a death blow for Kemp's Fantasy value. He's still an excellent hitter -- first-round-worthy, even -- and likely would have been steadier from start to finish if not for the injured hamstring. He's just no longer safe enough to draft with a top-five pick.

2011	602	115	195	39	126	40	0.324	663.5

Jason Kubel, ARI

OF

Jason Kubel set career highs in home runs (30) and strikeouts (151) in 2012, while getting his second-highest total of doubles (30) and his second-highest OPS (.833). He managed 506 at-bats, even though the Diamondbacks outfield had a plethora of players who could man the corners. Kubel emerged as the power-hitter of the group, though, and with the jettisoning of Chris Young, he is set to start at one of the corners -- assuming the team doesn't decide to go with Gerardo Parra instead. But with Justin Upton and Adam Eaton looking like they can supply all the speed needed in the outfield, one would have to think a power bat like Kubel's would get the shot at playing time. If the team decides to push

Parra off to the side, expect another shot at 30 home runs for Kubel, with an average that could be anywhere from .250 to .285. He's a late-round pick in deeper mixed leagues and a nice source of power for NL-only formats.

2011	366	37	100	12	58	1	0.273	245

Brent Lillibridge, CHC

1B/2B/OF/SS

Brent Lillibridge played for three teams in 2012, hitting .250 with three home runs and 13 steals in 190 at-bats. While he shouldn't be a draft pick this season, it's worth keeping track of his situation, as Lillibridge has two straight seasons of 10 or more steals despite not cracking 200 at-bats either year. For a single-league team in need of a band-aid because of injury or demotion, Lillibridge is at least a decent source of speed as a short-term plug-in off the waiver wire.

Year	AB	R	H	HR	RBI	SB	BA	FPTS

2011	186	38	48	13	29	10	0.258	168

Stephen Lombardozzi, WAS

2B/OF

Even though he didn't have a steady job at any position, Steve Lombardozzi found plenty of work in his rookie season with the Nationals, starting 83 games and playing in a total of 126 games. He was every bit the contact hitter that he had been in the minors, but Lombardozzi's results fell a little short of the standard he set in his various minor league stops. Instead of flirting with .300, Lombardozzi hit just .273, and he did so with very little power and only five stolen bases. While it's doubtful that he will ever be much of a home run threat, Lombardozzi should produce more doubles and triples this season, and the potential is there for a 20-steal season. Even without a regular role, Lombardozzi can do enough good things to be worth drafting in NL-only leagues.

Ryan Ludwick, CIN

OF

Ryan Ludwick's power never really went away, it was just severely limited in cavernous PETCO Park for parts of two seasons. But given the chance to play in the opposite extreme -- the hitter-friendly Great American Ballpark -- Ludwick delivered, hitting .275 with 26 home runs in just 422 at-bats in 2012. And Ludwick didn't really get regular, every day at-bats until after the All-Star Game, from which point on he hit .309 with 14 home runs in 63 games. Ludwick has gotten 500 at-bats just once in his career and he responded with 37 home runs. With his return to the Reds as the team's starting left-fielder -- and with the team adding Shin-Soo Choo to bat leadoff -- Ludwick becomes a cheap source of power and RBI. He will likely be selected in the late rounds of most 2013 drafts and is in line to return at least later mid-round value.

2011	490	56	116	13	75	1	0.237	303

Starling Marte, PIT

OF him fall too far on Draft Day.

After batting .282 with 12 home runs, 62 RBI and 21 stolen bases in 100 games in the minors, Starling Marte received his first taste of the majors last season and showed why he was considered such a top prospect quickly. He homered on the first pitch he saw in his debut and batted .290 with a .548 slugging percentage in his first 15 games with the big club. His numbers would balance out after that and he spent some time on the disabled list due to an oblique injury. Marte ended up batting .257 with five home runs, 17 RBI and 12 stolen bases over 47 games. The 24-year-old should be the opening day left fielder for the Pirates in 2013, but keep an eye on his progress during the spring just to be safe. With the potential for double-digit home runs and a good number of stolen bases, Marte should be targeted in the later rounds on Draft Day.

Year	AB	R	H	HR	RBI	SB	BA	FPTS

2012	167	18	43	5	17	12	0.257	113

John Mayberry, PHI

1B/OF

After showing some promise in power, speed and batting average in 267 at-bats in 2011, John Mayberry ended up being a bit of a disappointment in 2012. With 441 at-bats, Mayberry actually saw his home run numbers (15/14), average (.273/.245) and steals (8/1) numbers go down. He managed seven more doubles, but Mayberry was supposed to make a leap in 2012 that just was never realized. He showed some spark in July and August, hitting .284 with seven home runs in 141 at-bats, but finished the year with a whimper, batting .229 over his final 29 games. Despite his 2012 failures, Mayberry looked to have a starting job locked up...until Delmon Young was brought on board in late January. Now Mayberry is likely relegated to a platoon role at best, and hopes of a bounceback season are essentially shattered. He's a late gamble in NL-only leagues.

2011	267	37	73	15	49	8	0.273	236.5

Cameron Maybin, SD

OF

After looking like he might be turning the corner with a respectable .264 batting average and 40 stolen bases in 2011, Cameron Maybin took half a step back last year, making him practically irrelevant in Fantasy. But if you look at the numbers from one season to the next, he wasn't an especially different player. A loss of about 20 points on his batting average was enough to demote him in the Fantasy ranks from exciting up-and-comer to lost cause. Technically speaking, he can't be a lost cause as he enters his age-26 season. He's still too young for that. But realistically speaking, with a poor approach at the plate, modest power potential and little more than an isolated .264 batting average to hang his hat on, Maybin isn't all that exciting for Fantasy purposes. Unless you get desperate for steals late in a Rotisserie draft, don't bother with him.

2011	516	82	136	9	40	40	0.264	380.5

Andrew McCutchen, PIT

OF

Andrew McCutchen continued his ascension of the Fantasy ranks last season as he put together the best campaign of his career. He batted .362 with 18 home runs and 60 RBI in the first half en route to earning his second straight trip to the midsummer classic. While his numbers fell off a bit after the All-Star break, McCutchen ended up leading the National League in hits (194) and finished second in batting average with his .327 mark. Thanks to his career highs in home runs (31), RBI (96), on-base percentage (.400) and slugging percentage (.553), the 26-year-old heads into 2013 as one of the more valuable outfielders in Fantasy. It looks as though he could have reached his peak when it comes to power but McCutchen still has the speed and the ability to hit for average to continue to progress as an elite Fantasy option. The Pirates will be counting on him again to carry the club and owners who grab him in the early rounds will be relying on the two-time All-Star the same. McCutchen has shown significant progress in each of his first four seasons in the majors so don't let

Tyler Moore, WAS

OF

Tyler Moore entered the 2012 season with the reputation of a prospect who had power but questionable plate discipline. He split the year between the majors and Triple-A Syracuse, and at both levels, he showed that he could continue to launch homers while climbing the organizational ladder and draw walks as well. Granted, when the Nationals called Moore up, they used him primarily against lefties, but he actually hit right-handed pitchers better. With 46 strikeouts in 156 at-bats, Moore still has work to do on his contact skills, but his .263/.327/.513 line showed that he is ready for the majors. Moore will settle into a bench role again this year, but he's just a starter's injury away from making a contribution in deeper mixed leagues.

Year	AB	R	H	HR	RBI	SB	BA	FPTS
2013 (proj)	156	20	41	10	29	3	0.263	126
2012	156	20	41	10	29	3	0.263	127

Logan Morrison, MIA

1B/OF

Through the first two months of the 2012 season, Logan Morrison flailed his way to a .231 batting average with only three home runs and five doubles. Though Morrison was unable to lift his average higher, the next two months were something of a turnaround, as he clubbed eight home runs and 10 doubles. Just as he was becoming one of the more productive members of a struggling Marlins lineup, Morrison's season came to an end in late July, as he succumbed to his ongoing knee problems and ultimately had surgery in September. While Morrison should be ready to begin his fourth season in Miami on opening day, it's not clear which version will show up. As a rookie, he could be counted on for a decent batting average (.283) and high on-base percentage (.390), thanks to his gap power and patient approach. Over the last two years, Morrison has been more prone to hit flyballs, which has given him home run power at the expense of batting average. While Morrison once looked like a viable pick in standard mixed points leagues, the evaporation of his doubles power makes him a liability in those formats, while he doesn't help enough with home runs or batting average to be a force in Rotisserie. An expected move to first base from left field will further diminish his value. The safe play is to target Morrison in deeper mixed leagues and NL-only formats, while avoiding him in anything shallower.

2011	462	54	114	23	72	2	0.247	354.5

Kirk Nieuwenhuis, NYM

OF

Kirk Nieuwenhuis opened a lot of eyes early in 2012 after he was recalled in April and saw some steady playing time. He batted .301 with three home runs, 19 RBI and three stolen bases in his first 53 games before regression hit. Nieuwenhuis would hit just .174 with a .330 slugging percentage in the following 38 games before being optioned back to Triple-A. A foot injury down on the farm cut his season short but he is expected to compete for a starting job in 2013. The 25-year-old is an above-average defender who can hit for average and has hit close to 20 home runs in the minors before. Keep an eye on how he does during spring training because if Nieuwenhuis stands to see steady playing time in New York, he will be worth a look in deeper Fantasy leagues. Leave him for NL-only formats on Draft Day, however.

Year	AB	R	H	HR	RBI	SB	BA	FPTS
2013 (proj)	282	40	71	7	28	4	0.252	154
2012	282	40	71	7	28	4	0.252	156

Layne Nix, PHI

OF

Layne Nix hit 16 home runs over 324 at-bats in 2011, which is probably one of the more under-appreciated power surges in the last couple years. He parlayed that into a bench job with the Phillies, and saw just 114 at-bats in 2012, managing three home runs. If given full-time at-bats, Nix could flirt with 25 or even 30 home runs, but he'll need something like a Domonic Brown implosion and Darin Ruf disappointment to even get in the mix. For now, Nix has no Fantasy value outside of a gamble in very deep NL-only leagues.

Angel Pagan, SF

OF

After Angel Pagan turned in a subpar 2011 season with the Mets, it was not clear if he would rebound in his first year as a Giant. As it turned out, Pagan made the deal in which the Giants shipped Andres Torres and Ramon Ramirez to New York pay off handsomely. Fantasy-wise, Pagan provided something for everyone. Rotisserie owners enjoyed his 29 stolen bases, 95 runs and .288 batting average, while owners in points leagues benefitted from his 38 doubles and 15 triples. With speed and line drive power, there is no reason why Pagan can't produce similarly in 2013. This offseason, Pagan was rewarded with a four-year deal, so he will return atop the Giants' batting order again this season and be a threat to score 90-plus runs and steal 30-plus bases. That, along with a good batting average, makes him a top 40 outfielder in mixed leagues.

2011	478	68	125	7	56	32	0.262	373

Gerardo Parra, ARI

OF

There's good news and bad news for Gerardo Parra heading into 2013. First, the bad: Parra took a bit of a step back in 2012, losing about 60 at-bats from his 2011 totals and watching pretty much all of his other statistics -- home runs, RBI, triples, average and OPS fall. He did add one double (he had 21) and kept his steals at the same level (15), but he managed to get caught stealing nine times as opposed to just once in 2011. The good news? The Diamondbacks have made it clear that either Parra or Jason Kubel will play a role with the team going forward, with the other player likely being traded. Parra, 25, is the superior defender, who can hit for average and has shown nice speed. If he is the victor, his value should be decent enough to give him value in deeper mixed leagues. If Kubel wins out, though, Parra's value takes a massive hit, making him more of a play for single-league formats.

Year	AB	R	H	HR	RBI	SB	BA	FPTS
2013 (proj)	398	48	110	6	37	10	0.276	254
2012	385	58	105	7	36	15	0.273	264.5
2011	445	55	130	8	46	15	0.292	325

Hunter Pence, SF

OF

In 2011, a .314 batting average helped place Hunter Pence among the top 12 outfielders in both standard Rotisserie and Head-to-Head formats, but owners who banked on a repeat got shortchanged in 2012. As uncharacteristically high as his average was the year before, Pence's .253 mark from last season was distinctly un-Pence-like. The former Astro and Phillie typically has average contact and power skills, and that should be good enough to ensure him an average around .280, but a career-high 145 strikeouts helped to sink his batting average. While his average has fluctuated, Pence's peripheral stats, like strikeout rate and Isolated Power (the rate at which he gets extra bases), have been remarkably steady, so he is a strong candidate to rebound. Pence is also very durable, as he has missed no more than eight games in any of the last five seasons. That adds up to a lot of plate appearances, which gives Pence some extra value in points leagues. So while he doesn't possess tremendous power or speed, Pence does enough things well to be a top 40 outfielder.

2011	606	84	190	22	97	8	0.314	494

Juan Pierre, MIA

OF

Juan Pierre was a non-roster invitee to Phillies camp in 2011. Through happy accidents of circumstance and Pierre's still-there skill, the 35-year-old outfielder not only made the team, but managed 394 at-bats. Forgotten in all the fun poked at Pierre is the fact that he has a .297 career batting average. In 2012, he hit .307. He also showed that while he doesn't have the 60-steal potential of years past, he's still able to cause havoc on the basepaths, with 37 stolen bases. There's no power with Pierre, but his speed does allow him to hit about five triples a year. And with a decimated Marlins outfield, Pierre has a chance to win a starting job in Miami, a role that would make him a valuable source of steals. Pierre has hit below .280 just once in his entire career, and -- outside of his rookie year -- has stolen fewer than 30 bases just once. He may be getting old and he may have no power, but Pierre produces every year and is poised to begin 2013 as a starting outfielder. He could be a late-round flyer in deeper mixed leagues.

2011	639	80	178	2	50	27	0.279	405.5

Martin Prado, ARI

2B/3B/OF

That's more like it, right? After slumping to a .260 batting average during a 2011 season in which he battled a staph infection, Prado got back to the .300 mark in 2012. And though his main contributions in Fantasy were doubles and runs scored, he emerged as a viable steals threat as well, swiping 17 bases. His modest across-the-board totals made him a reliable mixed-league option even when his eligibility was limited to third base and the outfield, but his value soared later in the year when he got the five games necessary to gain eligibility at shortstop and second base. Of course, he's not eligible at either position anymore, and now that he's with the Diamondbacks, having come over from Atlanta in the Justin Upton trade, he'll most likely play third base exclusively. Because Prado won't provide more than 10-15 home runs or stolen bases in a given year, he doesn't have the upside to rate among the elite players at third base or the outfield, but seeing as he's hit .300 or better four of the last five seasons, he's as safe as you'll find among that next tier.

2011	551	66	143	13	57	4	0.260	344

Alex Presley, PIT

OF

Alex Presley had back-to-back productive callups each of the last two seasons, but he struggled after breaking camp with the big club in 2012. He was tabbed the starting left fielder out of spring but batted just .220 with a .305 slugging percentage before being demoted in May. Presley was recalled in June and finished the season batting .237 with 10 homers, 25 RBI and nine stolen bases in 104 games. He will likely compete with top prospect Starling Marte for playing time in left field so keep an eye on the situation throughout the spring. While there still might be some untapped upside left in the 27-year-old, plan on leaving Presley for NL-only formats on Draft Day.

Carlos Quentin, SD

OF

The good news for Carlos Quentin is that the move from hitter-friendly U.S. Cellular Field to hitter-friendly PETCO Park didn't slow him down one iota in 2012 (and now that the fences are coming in at PETCO, it's not such a big deal anyway). The bad news is he was unable to take the field for more than 86 games, missing two months at the beginning of the season because of knee surgery and a month at the end because of continued irritation in that same knee. He went under the knife again this offseason in an attempt to correct the problem once and for all, but seeing as he's never played more than 131 games in a season, you should pretty much assume Quentin will miss some time with one issue or another. As for his performance, again, the PETCO effect was negligible with him. One interesting development, though, was the sudden increase in walks. Despite a modest .261 batting average, he had a .374 on-base percentage, his highest since his near-MVP season in 2008. If he has matured to the point that walks are a regular part of his arsenal, he'll be able to avoid the lengthy slumps that move him in and out of mixed-league lineups even when healthy. Given the injury risk, though, you probably still shouldn't draft Quentin as more than a fourth outfielder in those formats.

Ben Revere, PHI

OF

After seemingly freeing up center field for him by dealing Denard Span to the Nationals, the Twins then went and dealt Ben Revere to the Phillies one week later. Given the way Revere performed in a semi-regular role in 2012, he deserved to be starting for someone. The Twins already knew he was an excellent base-stealer. When that .326 batting average he had accumulated over six minor-league seasons began to translate -- he hit .358 during a 39-game stretch from June 22 to Aug. 6 -- that was it. His time had come. The Twins either had to commit to a slap-hitting base-stealer in their outfield, or they had to swing a deal. They found a taker in Philadelphia, who needed a center fielder after trading away Shane Victorino in July. Provided Revere bats at the top of the lineup, he'll be under some pressure to improve his below-average walk rate, which would only lead to more stolen bases. Whether or not he does could be the difference between him being a low-end steals specialist or a legitimate every-week option in Fantasy. One thing's for sure, though: He's going to steal some bases. If you liked Emilio Bonifacio at this time last year, Revere should be on your radar.

Cody Ross, ARI

OF

Cody Ross spent a good amount of his career in pitcher-friendly venues (Florida, San Francisco, L.A. Dodgers), so when he came to Boston in 2012, it was no surprise to see his numbers jump. Limited to 130 games because of injury, Ross had the second-highest OPS of his career, contributing 34 doubles and 22 home runs in 476 at-bats. His .267 average was five points higher than his career mark, although he didn't exactly endear himself to points league owners with a career-high in strikeouts. Ross could do some damage in Arizona's friendly confines -- think 22 home runs and 30 doubles as a realistic output -- and will see his runs increase as the team's probable leadoff hitter. Sure, he's a bit of a risk, but the reward is worth it, especially for the low price would-be owners will pay. Ross should be a nice later round pick in deeper formats.

Darin Ruf, PHI

OF

The minor-league leader in home runs in 2012 wasn't Wil Myers or Miguel Sano or any of those other big-name prospects you hear so much about. It was Darin

Ruf, who, at age 26, might strike you as a Quadruple-A player along the lines of a Kila Ka'iahue or Mike Hessman. But unlike that notorious duo, he's actually in the mix for a starting job in 2013. With a couple unfavorable contracts already on the books, the Phillies have gone into penny-pinching mode, which could make an unexpectedly productive bat like Ruf just what the doctor ordered in left field. Of course, the Phillies did bring in Delmon Young late in the offseason, lengthening Ruf's odds. His natural position is first base, so he'll have to prove he's not a liability in the outfield before he can win a roster spot. His brief audition there last September went well enough, though, and he certainly didn't disappoint with the bat, collecting six extra-base hits -- including three homers -- in 33 at-bats. It's true he could end up being exposed with more at-bats, a la Bryan LaHair, but if nothing else, Ruf's power potential makes him worth a flier in NL-only leagues.

Year	AB	R	H	HR	RBI	SB	BA	FPTS

2012	33	4	11	3	10	0	0.333	34

Justin Ruggiano, MIA

OF

Though he possesses power, speed and a good glove, Justin Ruggiano never got much of a chance to stick in the majors before last season. When he did get opportunities, he didn't do much with them. That all changed when Ruggiano came over to the Marlins from the Astros in a May trade, as it didn't take long for manager Ozzie Guillen to start penciling him into the lineup. Even with missing nearly two weeks at the end of the season with a shoulder injury, Ruggiano started 74 games for the Marlins and he hit .313 with 13 home runs and 14 stolen bases. Though he strikes out a little too often, he can use his speed and gap power to keep his batting average high. Add in the potential for a 20-20 season and ample playing time, and you have an outfielder who is worth a late-round look in standard mixed leagues.

2011	105	11	26	4	13	1	0.248	58

Jordan Schafer, ATL

OF

Jordan Schafer displayed nice speed in his first full season with the Astros but struggled at the plate. He batted .262 with 14 stolen bases and 26 runs scored in his first 45 games before his numbers fell off drastically. Schafer would hit just .152 over his final 61 games and finished the year with a .211 average and 27 stolen bases. The 26-year-old was claimed off waivers by the Braves in the offseason and will compete to be a reserve outfielder this spring. Schafer, who played for Atlanta from 2009-2011, has the speed to make a difference in Fantasy but since he will likely not see regular at-bats in 2013, plan on leaving him for deeper NL-only formats on Draft Day.

2011	302	46	73	2	13	22	0.242	189

Nate Schierholtz, CHC

OF

This offseason, the Cubs signed Nate Schierholtz to a one-year, \$2.25 million deal, and he stands to get the bulk of the playing time in right field. According to Baseball-Reference, the most similar active player to Schierholtz is Padres' outfielder Chris Denorfia, and that tells you what you need to know about Schierholtz's prospects as an everyday player. Both players have been part-timers for most of their careers, and Denorfia has at least had a couple of seasons with double-digit steals. Should Brett Jackson or Jorge Soler be ready for the majors at some point this season, Schierholtz would be the obvious candidate to make way for one of them in the Cubs' outfield. Even if he does start for the whole season, Schierholtz is an option for NL-only leagues at best.

Skip Schumaker, LAD

2B/OF

Skip Schumaker had been as much of a mainstay for the Cardinals as any player since Albert Pujols left, having gotten semi-regular playing time at either left field or second base since 2008. But with his at-bats dwindling in recent years, the Cardinals decided this offseason that they no longer had a need for him, shipping him to Los Angeles for a minor-leaguer. With the star-studded Dodgers, Schumaker could potentially have a resurgence of sorts. Not only will he provide insurance for Carl Crawford, who's recovering from Tommy John surgery, but he could potentially emerge as the better half of a lefty-righty platoon with 35-year-old Mark Ellis at second base. Of course, Schumaker's lack of power or speed limits his appeal to NL-only leagues, but if he gets to bat in the right spot in that lineup, he could be a sneaky middle infielder in those formats.

2011	367	34	104	2	38	0	0.283	203

Travis Snider, PIT

OF

Travis Snider had an interesting season in 2012. After losing out on the starting left field job in Toronto, he began the year in the minors, where he tore up lesser pitching. He would eventually get called up in July but was traded to the Pirates shortly after. Snider batted .250 with just one homer and nine RBI in 50 games in Pittsburgh and was forced to miss time toward the end of the season due to a hamstring injury. The 24-year-old is expected to compete for playing time in right field during the spring and has the potential to be a viable option in Fantasy with a full season of at-bats. Snider is worth targeting in deeper Fantasy formats on Draft Day but owners in mixed leagues should take more of a wait-and-see approach with him.

Year	AB	R	H	HR	RBI	SB	BA	FPTS

2011	187	23	42	3	30	9	0.225	117

Alfonso Soriano, CHC

OF

Alfonso Soriano had a huge bounce-back campaign for the Cubs last season as he posted his best numbers since 2005. He batted .265 with 15 home runs and 48 RBI in the first half before picking up his run production after the All-Star break, finishing with 32 homers and 108 RBI. While he struck out 153 times, his .262 average was his best mark since 2008 and he slugged .499. The 37-year-old still has two years left on the eight-year, \$136 million deal he signed in 2007 but his ability to hit for power and drive in runs makes Soriano a reliable option in Fantasy. The Cubs could try and move him before the trade deadline, but if such a move sends him to a contender, that would only help his value. While he doesn't have the speed to steal 30-40 bases anymore, owners should plan on targeting Soriano in the middle-to-late rounds on Draft Day.

2011	475	50	116	26	88	2	0.244	338.5

Denard Span, WAS

OF

After five seasons of dealing with head injuries and underwhelming steals totals, the Twins shipped Denard Span to Washington in the offseason, where he'll get a chance to restore a career that once showed such promise. The good news for him is he appeared to bounce back last year from the severe concussion that sidelined him for half of 2011. The bad news is it didn't compel him to steal any more bases. His 17 last year were the fewest he's had in a 500-at-bat season, and he's never had more than 26. Why he didn't run more for a Minnesota team that typically had to manufacture runs during his stay there is a question that could determine whether or not he's worth the trouble now that he's in a new environment. If the environment was the problem, great. He's a genuinely sleeper in Fantasy. If the player's mindset was the problem, you can bet Span won't be inclined to run any more with Bryce Harper and Ryan Zimmerman hitting behind him. If nothing else, Span's move to Washington should mean a higher number of runs scored, and that, combined with his above-average walk

rate and improving extra-base pop should make him a fringe outfielder in mixed leagues, particularly Head-to-Head formats.

Year	AB	R	H	HR	RBI	SB	BA	FPTS
2013 (proj)	600	85	165	6	49	21	0.275	422

2011	284	37	75	2	16	6	0.264	175

Giancarlo Stanton, MIA

OF

After the Marlins' blockbuster offseason trade with the Blue Jays, Giancarlo Stanton remains as the only proven producer in Miami's lineup. That won't do much for his run production, but even with a weaker lineup around him, Stanton should emerge as a top 10 Fantasy outfielder this season. With knee and oblique issues limiting him to 123 games, the slugger clubbed 37 home runs and 30 doubles while posting a career-high .290 batting average. The 2012 Marlins were not exactly an offensive juggernaut, but Stanton drove in 86 runs while scoring 75 times, so however the 2013 lineup shapes up, owners can count on Stanton to produce in all of the 5x5 categories, aside from stolen bases. Only another injury-marred season can prevent Stanton from offering good value back on an early round pick.

2012	449	75	130	37	86	6	0.290	423.5
2011	516	79	135	34	87	5	0.262	444

Ryan Sweeney, CHC

OF

Ryan Sweeney was another hard-luck Red Sox story in 2012, battling injury while trying to carve out a role in the Boston outfield. While he had the second-highest doubles total in his career (19) over his 63-game stint last season, his average dipped to the lowest mark (.260) since his rookie year, and he didn't steal any bases or hit any home runs. The frustration was apparent when Sweeney's season ended after he punched a door and broke a knuckle in July. Non-tendered by the Sox in November, Sweeney will likely catch on with another team as a bench player, in line for about 300 at-bats. He doesn't have much value outside of single-league formats.

2011	264	34	70	1	25	1	0.265	159

Jose Tabata, PIT

OF

Jose Tabata had yet another disappointing campaign in 2012, posting his lowest numbers in the majors to date. He batted just .230 in 72 games before being sent to the minors in early July. He would hit slightly better after returning in mid-August and ended the year with three home runs and 16 RBI while batting .243 in 333 at-bats. Tabata has not done much for owners after his impressive callup in 2010 -- when he batted .299 -- and will fight to be the fourth or fifth outfielder during spring training. While the 24-year-old might still have some decent upside, plan on ignoring Tabata in all but NL-only formats on Draft Day.

Year	AB	R	H	HR	RBI	SB	BA	FPTS
2013 (proj)	357	52	98	4	24	14	0.275	233.5
2012	333	43	81	3	16	8	0.243	185
2011	334	53	89	4	21	16	0.266	233.5

[Oscar Taveras, STL](#)

Though already considered a top prospect going into last season, Taveras' performance against Double-A competition as a 19-year-old caused the hype on him to soar, with some even calling for his promotion to the big club even though the Cardinals outfield was overstocked to begin with. Taveras never did get that call to the majors -- or even Triple-A -- but the hype on him remains at an all-time high. He's sure to get a long look in spring training as the Cardinals assess his major-league readiness. Even though their outfield is still beyond capacity, with on-base specialist Matt Carpenter confined to a bench spot for now, their corner options -- Matt Holliday and Carlos Beltran -- aren't getting any younger. In particular, Beltran, with his degraded knees, might be due for a reduction in playing time in his age-36 season after he wore down in the second half last season. Or, just as likely, he could land on the DL at some point. The bottom line is the Cardinals have every excuse to make at-bats for Taveras if he gets off to a hot start in the minors. With his low strikeout rate making him a near certainty for a high batting average (to go along with middle-of-the-order power), he might even be worth a draft-and-stash in mixed leagues.

Year	AB	R	H	HR	RBI	SB	BA	FPTS
2013 (proj)	130	18	36	4	20	4	0.277	103

[B.J. Upton, ATL](#)

With four straight seasons of a batting average below .250, Fantasy owners have likely given up waiting for B.J. Upton to hit for average. He had established a reputation for supplying steals and a moderate amount of power, making him a decent midrange outfield option in mixed leagues. In 2012, though, Upton just missed joining the 30-30 club, stealing 31 bases and homering 28 times. The career high in home runs could give Upton some extra credibility heading into 2013 drafts, but owners should be wary of raising their expectations too high. Upton went on a late-season power spree, hitting 19 of those homers in the season's final two months. He did hit flyballs at a higher rate during that span, hinting at a possible change in approach that could have paid off. However, it's still a very small sample on which to base a change in perceived value. Though it's possible he has taken a step forward in his development, he could just be the same old B.J. Upton. The move from Tampa Bay to Atlanta shouldn't impact his value much either, so the safe move is to wait until the middle rounds to draft him.

Year	AB	R	H	HR	RBI	SB	BA	FPTS
2013 (proj)	550	80	129	22	76	32	0.235	429.5
2012	573	79	141	28	78	31	0.246	434.5
2011	560	82	136	23	81	36	0.243	457.5

[Justin Upton, ATL](#)

Justin Upton's on a disturbing every-other-season trend that -- good news! -- has him due for a very good season in 2013. The problem with this, however, is that that players never finish neatly with the every-other-year thing -- they always break out of it. And if Upton repeats his 2010/2012 (decent) numbers and not his 2009/2011 (awesome) ones, owners may have used a high draft pick on stats they could have gotten in much later rounds. Upton has a ton of talent and potential, he just can't seem to be consistent with it. In 2012, he hit .280 with 17 home runs, 18 steals and 24 doubles. Good numbers, but not the .289/31/21/39 he compiled in 2011. Confusing, erratic, but full of potential, Upton has a chance to be great, it's just tough deciding if your Fantasy team is the best place to figure out whether Dr. Jekyll or Mr. Hyde will be showing up in 2013. However, we must now consider the X-factor of Justin playing alongside his older brother, B.J. every day in Atlanta, following a January trade. For now, we'll lean toward the, "it's good for him," side. Upton should be taken in the second or third round on Draft Day.

Year	AB	R	H	HR	RBI	SB	BA	FPTS
2013 (proj)	580	110	165	26	82	17	0.284	511

2011	592	105	171	31	88	21	0.289	554

[Will Venable, SD](#)

By now, Will Venable has pretty well established what he's capable of delivering for Fantasy owners. He'll steal 20-25 bases and threaten for double-digit homers. His poor plate discipline will cause him to run hot and cold, though,

OF

finishing with a batting average somewhere below .270. The complete package would be halfway useful in Fantasy -- something along the lines of a left-handed-hitting Chris Young -- but of course, he doesn't play every day. As the better half of a lefty-righty platoon in the Padres outfield (with Chris Denorfia the leading man for the lesser role), Venable simply won't get the at-bats to measure up in mixed leagues. He'll be worth a waiver claim when he has the right matchups during one of his hot streaks, but on Draft Day, he's better left for NL-only leagues.

Year	AB	R	H	HR	RBI	SB	BA	FPTS
2013 (proj)	400	59	101	10	43	22	0.253	294.5
2012	417	62	110	9	45	24	0.264	327
2011	370	49	91	9	44	26	0.246	278

[Jayson Werth, WAS](#)

Jayson Werth missed roughly half of the 2012 season with a broken wrist, but even when he was healthy enough to play for the Nationals he didn't provide Fantasy owners much in the way of home runs or RBI. The player who hit 36 homers and drove in 99 runs with the Phillies in 2009 seemed like a distant memory, as he produced only five homers and 35 RBI in 81 games. It would be convenient to blame Werth's wrist injury for the lack of firepower, but when he came off the disabled list in early August, he produced his best month, hitting .358 with nine doubles. Werth did hit .300 with a .387 on-base percentage for the season, so he didn't leave his owners completely empty-handed. However, with a second straight season of diminished power numbers, Werth's status as a top 40 outfielder is shaky at best. He is still a threat to steal 20-plus bases, so he's a decent use of a late round pick in standard mixed Rotisserie leagues.

Year	AB	R	H	HR	RBI	SB	BA	FPTS
2013 (proj)	550	73	140	19	66	13	0.255	401

2011	561	69	130	20	58	19	0.232	384

[Delmon Young, PHI](#)

What many observers probably remember best about Delmon Young's 2012 season with the Tigers was his arrest for aggravated harassment. Young certainly didn't provide many memorable moments on the field, as he turned in another season with a sub-.270 batting average and middling power. At age 27, there is still some hope that Young can rediscover the power that he has shown at times, but as he enters his peak years, owners may just have to accept that he is not going to be a 20-homer threat. It's more realistic to expect a rebound in his batting average, as Young routinely flirted with a .290 average or better earlier in his career. He needs to reverse last season's increases in strikeouts and popouts, but that's not a tall order for someone at this stage of his career. The Phillies will give Young a chance to crack their starting outfield, though the start of his season could be delayed by his recovery from offseason ankle surgery. He is worth considering in deeper mixed leagues and NL-only formats.

Year	AB	R	H	HR	RBI	SB	BA	FPTS
2013 (proj)	539	62	150	17	83	2	0.278	358.5
2012	574	54	153	18	74	0	0.267	333
2011	473	54	127	12	64	1	0.268	288.5

[Eric Young, COL](#)

Eric Young has speed, good contact skills and a knack for drawing walks, but those qualities are not enough to elevate him above fifth-outfielder status in Colorado. Barring a trade, Young will have a hard time exceeding the 196 plate appearances he received last year, but he will still be relevant in deep Fantasy leagues. Despite having played only 256 games over his four seasons, Young has swiped 62 bases. His help in that category alone makes Young someone whom NL-only Rotisserie owners could target on Draft Day.

2011	198	34	49	0	10	27	0.247	163

Starting Pitcher

[Henderson Alvarez](#), MIA

Henderson Alvarez posted a 3.53 ERA in 10 starts during his callup in 2011 but struggled in his first full season in the rotation. He went 5-7 with a 4.36 ERA in his first 17 starts and struggled after the All-Star break, recording a 5.51 ERA over his final 14 outings. The right-hander did not impress owners much with his 79-to-54 strikeout-to-walk ratio in 187 1/3 innings pitched but proved to be durable and still has some solid upside at age 22. Alvarez was traded from the Blue Jays to the Marlins in a blockbuster deal during the offseason and should benefit from the move to Miami. Marlins Park is much more spacious than the Rogers Centre and pitching in the NL East should be a bit more forgiving than the rough AL East. While Alvarez will likely struggle to see run support, he should be productive enough to be considered a viable option in NL-only formats. Alvarez might also be worth a look in some deeper mixed leagues as the change of scenery could help him reach his potential in Fantasy.

[Bronson Arroyo](#), CIN

Bronson Arroyo finished his eighth straight season with 199 or more innings pitched in 2012, and it was a return to what we have come to expect from him. After back-to-back seasons of sub-4.00 ERAs in 2009 and 2010, Arroyo was lit up to the tune of a 5.07 ERA and 1.37 WHIP in 2011. But 2012 saw him dip back to a 3.74 ERA and 1.21 WHIP. His strikeout rate was his highest since 2008 and he cut 20 home runs off his total from 2012 (the biggest culprit of his ERA bounce), going from 46 to 26. In fact, he did such a good job of containing homers that he finished with his lowest total since 2005. Arroyo's major problem was keeping the ball in the park and he showed he could handle it once again in 2012. He won't get a lot of strikeouts, but Arroyo can help a Fantasy team with a low ERA and WHIP. He'll likely be drafted in the later rounds in 2013.

[Homer Bailey](#), CIN

Homer Bailey pitched a career high 208 innings in 2012, sporting a 3.68 ERA and 1.24 WHIP, while also throwing a no-hitter in his penultimate start on September 28. Bailey's final numbers were solid, but owners in Head-to-Head leagues were consistently frustrated by his erratic results, as he had the habit of following up great stretches with a series of blowouts. In July, for instance, Bailey had a string of five starts with two or fewer runs allowed. And he followed that up with a six-run outing on July 31, followed by four or more runs allowed in four of his five August starts. Roto owners, however, gladly took the final results, unaffected by his up-and-down performances. Adjust accordingly for your league setup, but Bailey is likely to be taken in the later rounds of most drafts.

[Anthony Bass](#), SD

Last year, in his first full major-league season, Anthony Bass had an uneven performance that didn't exactly clarify his role going forward. The Padres liked his performance as a reliever in 2011 enough to give him a look as a starter early in 2012, and his first eight starts, he looked a mainstay, posting a 2.94 ERA and 1.20 WHIP with more than a strikeout per inning. But then, he endured a rocky six-start stretch that inflated his ERA by nearly two runs and culminated with a trip to the DL for shoulder inflammation. When he returned in late September, it was as a reliever, and though he produced a 2.79 ERA in seven appearances, his strikeout rate during that stretch suggests his stuff wasn't quite up to snuff. So how much did the injury influence his performance? Is it completely behind him now? Will the Padres give him another shot as a starter, or is he confined to the bullpen indefinitely? It's all a guessing game right now. Because he throws relatively hard, his potential as a starter is intriguing, but

SP

he's looking like a long shot for a rotation spot this spring. Bass probably isn't your best choice in NL-only leagues.

2011	3	48	2-0	1.676	0	24	1.283	99

[Josh Beckett](#), LAD

From a declining fastball to an ill-advised golf outing to injuries to his thumb, back, hamstring and shoulder, the case for Josh Beckett's eviction from Boston built throughout the 2012 season, ultimately culminating in a blockbuster deal that sent him along with Adrian Gonzalez, Carl Crawford and Nick Punto to the Dodgers. Back in the lighter-hitting league and a pitcher-friendly park, Beckett managed to pitch better with the Dodgers, posting a 2.93 ERA in seven starts. But his velocity wasn't any better, leading to a disappointing strikeout total more starts than not. Beckett doesn't need to be able to blow the ball by hitters to have success. His time with the Dodgers -- not to mention an eight-game stretch earlier in the season in which he posted a 3.31 ERA -- proves that. But with more of a pitch-to-contact approach, the 32-year-old will be susceptible to the big inning, making him not such a safe bet for a low ERA. With his strikeout rate also down and his durability in question, clearly Beckett doesn't have the same stature he once did in Fantasy. He'll likely rebound to a degree with a full season in Los Angeles, but he's now the type of pitcher you draft to round out your staff rather than lead it.

[Chad Billingsley](#), LAD

Not all is well for Chad Billingsley entering 2013 -- and this time, it's not just in reference to his numbers. He has a partially torn ligament in his elbow -- one that forced him to shut down a month early in 2012 -- and to this point, it hasn't been repaired. Hoping to avoid Tommy John surgery, Billingsley instead opted for a platelet-rich plasma injection in October. It worked to the extent that he was able to throw without pain this offseason, but you still can't help but wonder if the elbow is a ticking time bomb for the 28-year-old right-hander. He'll attempt to give it a go in spring training, but how effective he'll be and how long he'll last are complete mysteries at this point. And given the way Billingsley's career has unfolded, anything less than the best from him probably won't be too appetizing for Fantasy purposes. Walks remain an issue for him from time to time, and he's no longer a strikeout-per-inning type. He's still effective enough that he's worth a late-round flier in the majority of mixed leagues, but understand that 2013 might end up being a lost season for him.

RP/SP

[Madison Bumgarner, SF](#)

SP

While Madison Bumgarner didn't exactly break new ground last season, he didn't need to, as he had already established himself as a top-flight starter in his first two seasons in the Giants' rotation. Then again, if the season had ended in the middle of August, Bumgarner would have finished with decidedly better stats than he had in 2011. After making his 25th start on August 20, Bumgarner was 14-7 with a 2.83 ERA, walking a mere 1.7 batters per nine innings, as compared to the 13-13 record, 3.21 ERA and 2.0 BB/9 he registered the previous season. Then over his final seven starts, Bumgarner struggled to find the strike zone, as he walked 17 batters over 36 2/3 innings, going 2-4 with a 5.89 ERA. While he didn't have a great postseason, Bumgarner did a better job of throwing strikes, so Fantasy owners shouldn't worry about his control issues carrying over into this season. Owners can safely view the lefty as a top 20 starting pitcher. And if he has a true breakout in 2013, he could wind up being the ace of many Fantasy staffs.

Year	GS	INN	W-L	ERA	CG	K	WHIP	FPTS

2011	33	205	13-13	3.210	0	191	1.212	478.5

[A.J. Burnett, PIT](#)

SP

After falling out of favor with both the Yankees and Fantasy owners over the last two seasons, A.J. Burnett was traded back to the National League in 2012 and had a bounce-back campaign for the Pirates. He posted just three losses over his first 20 starts and despite a couple of rough outings down the stretch, finished 16-10 with a 3.51 ERA in his 31 starts. Pitching in the relatively weak NL Central, the right-hander struck out 180 batters in 202 1/3 innings pitched while walking just 62 on his way to a 1.24 WHIP. The 35-year-old has become more of a well-rounded pitcher at this stage of his career and should be able to post similar numbers in his second season in Pittsburgh. Burnett should be taken in the later middle rounds on Draft Day in 2013.

Year	GS	INN	W-L	ERA	CG	K	WHIP	FPTS

2011	32	190	11-11	5.154	0	173	1.434	318.5

[Trevor Cahill, ARI](#)

SP

There's an interesting dichotomy with Trevor Cahill that is unique to Fantasy. Head-to-Head players may remember Cahill as a marginal pitcher in 2012. He gave up four runs or more in 11 of his 32 starts and didn't exactly endear himself to owners who got good, but not great, weeks from him. But Roto players saw a different Cahill in 2012, one who finished the year with a 3.78 ERA, 1.29 WHIP and a career-high 156 strikeouts. He eclipsed 195 innings for the third straight season and, even with a move to a smaller park, had a career-low in home runs allowed with 16. Granted, Cahill's more glaring dichotomy was that he ended up being a far better pitcher on the road (2.91 ERA) than at home (4.68 ERA), but add it all together -- or take advantage of the splits -- and you had a very good pitcher. He should be drafted in the later part of middle rounds in 2013.

Year	GS	INN	W-L	ERA	CG	K	WHIP	FPTS

2011	34	208	12-14	4.160	0	147	1.425	373.5

[Matt Cain, SF](#)

SP

By almost every conceivable measure, Matt Cain had a career year in 2012. He set personal bests with 16 wins and a 2.1 BB/9 rate, had his highest K/9 rate (7.9) since his rookie season and posted his lowest ERA (2.79) and WHIP (1.04) for a full season. Though it hasn't always shown in his win total or ERA, Cain has been slowly, steadily improving his skill set with each successive season. Key to Cain's development has been the increased use of his slider, particularly on two-strike counts, as according to PitchFX data it has been his best pitch for getting swings-and-misses over the last two years. Even so, Cain is still not a great source of strikeouts, but he makes up for it with consistently low line drive rates and batting averages on balls in play (BABIP), which help lower his ERA and WHIP. Even though Cain had the lowest strikeout total of the top seven starters in both standard Rotisserie and Head-to-Head formats last

year, his inclusion among the elite was no fluke. Cain can be drafted as an ace for your Fantasy rotation in practically any format.

2011	33	222	12-11	2.883	1	179	1.083	541.5

[Chris Capuano, LAD](#)

SP

Chris Capuano's 2012 was a tale of two halves. Prior to the All-Star break, he was one of the biggest surprises in Fantasy, going 9-4 with a 2.91 ERA, 1.16 WHIP and 8.1 strikeouts per nine innings. Yup, hard to imagine ever sitting that player. Of course, the fact those numbers were regarded as a surprise should have clued Fantasy owners into what would happen next. He fell apart in the second half, going 3-8 with a 4.76 ERA, 1.30 WHIP and 6.4 strikeouts per nine innings. The real Capuano is likely somewhere in between the two extremes. Even at Dodger Stadium, he's too susceptible to the long ball to keep his ERA below 3.50, but he doesn't hurt himself with walks and holds his own in terms of strikeouts. You might even call him underrated if his impressive first half hadn't put him squarely on the map last season. Of course, he still might go undrafted in some leagues just because he ended the year on such a sour note, but you could certainly do worse than Capuano with a late-round pick in mixed leagues. Just understand that, at age 34, he doesn't really have any untapped potential.

2011	31	186	11-12	4.548	1	168	1.349	351

[Andrew Cashner, SD](#)

RP/SP

Andrew Cashner is the main player the Padres got back for Anthony Rizzo, whose performance in the second half last year speaks for itself. So how did San Diego make out in the deal? Hard to say yet because we've hardly seen Cashner in uniform. Though the Cubs used him in relief, the Padres tried to stretch him out as a starter midway through last season. It looked like a natural fit when he allowed two runs on two hits with one walk and nine strikeouts over 6 1/3 innings in his return from the minor leagues June 28 at Houston, but he didn't get a chance to build off that performance, straining a muscle in his back next time out. He did return for three appearances in September, but by then, he didn't have enough time to make an impression one way or another. With a fastball that hits triple digits, Cashner could be a revelation in Fantasy if he's able to keep his walks down as a starter, but whether the Padres will give him another chance and whether he'll hold up in the role remain to be seen. Because he's already dealing with a thumb injury that will sideline him for the first three weeks of this season, Cashner is a sleeper better left for NL-only leagues.

2011	1	11	0-0	1.688	0	8	0.656	27

Jhoulys Chacin, COL

SP

As a rookie in 2010, Jhoulys Chacin had all the look of an emerging ace, as he posted a 3.28 ERA with 138 strikeouts over 137 1/3 innings for the Rockies. Chacin had a harder time fooling batters as a sophomore, and his third season was mostly a mess. After beginning the year with five starts that produced a 7.30 ERA, Chacin went on the disabled list with nerve damage in his right shoulder. When he finally returned in late August, Chacin got off to a hot start, but eventually he succumbed to poor command. Even when he pitched well, he was limited by the Rockies' low pitch counts for their starters. According to the Denver Post, the team is expected to return to a more traditional five-man rotation and pitch counts, but that doesn't mean that Chacin can be trusted in standard mixed leagues. Until he can get back to missing bats like he did as a rookie, he should only be drafted in deeper mixed leagues and NL-only formats.

2011	31	194	11-14	3.619	2	150	1.314	381

Josh Collmenter, ARI

RP/SP

With the amount of disdain some Fantasy owners use when speaking of Josh Collmenter, one might expect to open up his player page and see disturbing images of him pushing old ladies down stairs. But this is not the case. Collmenter has two straight seasons of sub-4.00 ERA and a career WHIP of 1.14. In 28 appearances in 2012, Collmenter struck out 80 batters in 90 1/3 innings. So why the hatred? Maybe it was his first half, when he put up a 5.75 ERA in 12 appearances, including four starts. Perhaps it was Arizona's insistence on trotting out Collmenter instead of promoting Trevor Bauer. Collmenter, though, doesn't really deserve the scorn. He's a good pitcher with good numbers throughout his career, both in the minors and majors. Collmenter doesn't deserve the Fantasy hatred he's received, but he won't have much value in 2013, either. This, however, is based more on his role, with Arizona having an embarrassment of pitching riches. Collmenter will likely enter 2013 in long relief, which limits his value to NL-only leagues.

Year	GS	INN	W-L	ERA	CG	K	WHIP	FPTS
2013 (proj)	18	122	8-6	3.531	0	90	1.136	278
2012	11	90	5-3	3.686	0	80	1.262	189
2011	24	154	10-10	3.382	0	100	1.069	350

Patrick Corbin, ARI

SP

Despite starting 17 games for Arizona in 2012, Pat Corbin looks like a man without a role for the 2013 Diamondbacks. It's not the greatest injustice -- Arizona has a stacked rotation and Corbin produced a 6-8 record and 4.54 ERA -- but there were some bright spots. In August, when Corbin was transitioned back to the rotation, he posted a 3.68 ERA and 1.15 WHIP. However, he followed that up with a 6.03 ERA in September and October. Don't expect much from Corbin in 2013, outside of a long relief/emergency starter role. He can be left undrafted in most formats.

Year	GS	INN	W-L	ERA	CG	K	WHIP	FPTS
2013 (proj)	27	160	10-11	3.938	0	126	1.262	331
2012	17	107	6-8	4.542	0	86	1.327	194

Johnny Cueto, CIN

SP

Here's a fun fact: Johnny Cueto did not set career-bests in ERA (2.78) and WHIP (1.17) in 2012. Nope, he did that in 2011 (2.31/1.09). He did, however, set a career high in wins (19) and strikeouts (170). And he finished 11th overall in points leagues among starting pitchers. All signs point to Cueto repeating -- if not improving upon -- his 2012 numbers. After a somewhat inauspicious start to his career, Cueto has improved to the point where he should be considered a borderline elite Fantasy option, especially in light of his higher strikeout rate. Cueto will likely be one of the top 15 pitchers taken on Draft Day and won't last much deeper than the middle rounds.

Year	GS	INN	W-L	ERA	CG	K	WHIP	FPTS

2011	24	156	9-5	2.308	3	104	1.090	392

Jorge De La Rosa, COL

SP

After missing nearly all of the 2012 season while recovering from Tommy John surgery, Jorge De La Rosa has become something of a forgotten man. He didn't help his own cause with his September return, in which he registered a 9.28 ERA in three starts, but Fantasy owners should give De La Rosa a mulligan on those first outings back from surgery. He was off to a good start in 2011 before getting shelved, and prior to that, De La Rosa had shown promise with high strikeout rates and growing ground ball rates. Any pitcher coming back from Tommy John surgery is a risk, but there are also plenty of success stories from which to draw encouragement. If De La Rosa reverts to form, he will have something to offer owners in standard mixed leagues. However, he is likely to go undrafted in most of those formats, so the shrewd move is to target him as a waiver claim or perhaps during the reserve round phase of your drafts.

Year	GS	INN	W-L	ERA	CG	K	WHIP	FPTS

2011	10	59	5-2	3.509	1	52	1.186	148

Ross Detwiler, WAS

SP

Ross Detwiler was the "other guy" in the Nationals rotation, holding down the fifth spot for most of the season in relative anonymity. He didn't draw the attention that Stephen Strasburg, Gio Gonzalez or Jordan Zimmermann did, and for obvious reasons. Detwiler lacked the prospect pedigree his fellow rotation members had in their minor league careers, and as a major leaguer, the lefty has been an unglamorous contact pitcher who has shuffled between starting and relieving. Despite all that, Detwiler did make Fantasy owners take notice as he held his own with a 10-8 record, 3.40 ERA and 1.22 WHIP in 2012. Though he recorded only 105 strikeouts in 164 1/3 innings, Detwiler compensated by throwing strikes and turning more than half of all hit balls into grounders. That alone didn't get Detwiler's ERA and WHIP well below the league average. He also got help from a .269 batting average on balls in play (BABIP) -- a rate that he will be hard-pressed to equal in 2013. Still, Detwiler can help with categories other than strikeouts and is worth drafting in deeper mixed league formats.

2011	10	66	4-5	3.000	0	41	1.258	128.5

Nate Eovaldi, MIA

SP

Nate Eovaldi had an eventful 2012 season, which saw him start out at Double-A Chattanooga, get recalled by the Dodgers to fill the rotation spot of the injured Ted Lilly (shoulder), get traded as part of the deal that netted Hanley Ramirez from the Marlins and finally become a key part of the Miami rotation. Despite all of the changes, much also remained the same for Eovaldi. The hard-throwing righty enjoyed success in the minors, registering a decent strikeout rate and a 3.09 ERA, but command was more elusive at the major league level. Then again, the 4.30 ERA he achieved in 22 starts with the Dodgers and Marlins isn't too bad for a 22-year-old with no Triple-A experience. Now at age 23, Eovaldi is expected to begin the season in the Marlins' rotation. He could develop into a starter that mixed league owners can trust, but he will have to improve substantially. On Draft Day, he should only be on the minds of NL-only owners.

2011	6	35	1-2	3.635	0	23	1.385	57.5

[Marco Estrada](#), MIL

SP

Marco Estrada had worked almost exclusively as a starter throughout his minor league career, and for the most part did so successfully, but it wasn't until 2012 that he got a chance to stick in a major league rotation. After beginning the season in the bullpen, the Brewers moved Estrada into the injured Chris Narveson's (rotator cuff surgery) spot. The 29-year-old didn't disappoint, as he finished with a 3.64 ERA and 143 strikeouts over 138 1/3 innings. Estrada's ability to pound the strike zone and get swings-and-misses didn't wane as he moved into a starting role, and his only glaring weakness was a propensity to allow flyballs at a high rate. That's a hazardous tendency to have when Miller Park is your home stadium, and Estrada allowed 11 home runs in 78 2/3 innings in Milwaukee. Estrada escaped with a 2.97 home ERA thanks to an unusually high strand rate, but he may not be quite as fortunate going forward. Still, Estrada offers enough in terms of strikeouts and a low ERA and WHIP that he should be drafted in standard mixed leagues, and he should be available in the later rounds.

2011	7	93	4-8	4.079	0	88	1.209	163

[Scott Feldman](#), CHC

SP

After spending the first eight years of his career with the Rangers, Scott Feldman signed with the Cubs in November and will call Wrigley home for at least one year. Feldman's an interesting pitcher, as he finished 2012 with a 5.09 ERA and 1.38 WHIP in 123 2/3 innings in 21 starts and eight relief appearances. Feldman has said he prefers starting and the one season in which he started more than 25 games (2009, with 31) was arguably his best year, with a 4.08 ERA, 1.28 WHIP and 113 strikeouts in 189 2/3 innings. Feldman's seen his strikeout rate rise from 5.4 in 2009 to 7.0 in 2012, but he's been wildly inconsistent throughout his career. And if the upside of having Feldman in his supposed comfort zone of being a starter is a 4.08 ERA, he can be left to the late rounds of deeper leagues and middle rounds of NL-only leagues.

[Mike Fiers](#), MIL

SP

It's not every day that a soft-tossing righty can punch out a major league batter per inning, but that's exactly what rookie Mike Fiers did for the Brewers last season. He quickly became a Fantasy favorite, as he made it into the first week of August with a 6-4 record, 1.80 ERA and 1.01 WHIP. As good as Fiers was at racking up Ks and limiting free passes, those numbers were too good to be true. A flyball pitcher, Fiers somehow managed to allow only three home runs through his first 80 innings, but over the last two months of the season, his luck reversed dramatically. In his final 10 starts, Fiers allowed nine home runs over just 47 2/3 innings, and he posted a 6.99 ERA over that span. Owners shouldn't expect either version of Fiers to show up in 2013, as he should find the middle ground. His end-of-season 3.74 ERA and 1.26 WHIP are probably not far from what he will put up this coming season. Even during his slump, Fiers kept on getting strikeouts, so despite his low velocity, he can help in that category. Consider him a late-round option in standard mixed leagues.

[Jeff Francis](#), COL

SP

It's asking a lot of Fantasy owners to get excited about Jeff Francis, given that the lowest ERA he has recorded over his last four seasons was 4.82 (in 2011 with the Royals). Francis was actually an improved pitcher last season, though his 5.58 ERA doesn't tell that story. The lefty improved his strikeout, walk and ground ball rates, but righties hit .351 against him when the ball was in play, and he allowed a .277 average on ground balls versus all hitters. Not that every right-handed hitter he faced was a pull hitter, but maybe it's not a coincidence that the

Rockies featured weak defense on the left side of the infield, particularly while Troy Tulowitzki was sidelined by groin surgery. Perhaps Tulowitzki's return in 2013 will save Francis from a few base hits, and he can get his ERA and WHIP low enough that he can be a viable option in NL-only leagues.

[Yovani Gallardo](#), MIL

SP

On a per-inning basis, of all pitchers with 600 or more innings over the last four seasons, only Tim Lincecum and Clayton Kershaw have thrown more strikeouts than Brewers ace Yovani Gallardo. In terms of total number of strikeouts, only six pitchers have bested Gallardo over the same period, so by any measure, Gallardo has established himself as one of the most reliable sources of Ks in Fantasy. Unfortunately for his Fantasy owners, he has been less dependable at minimizing walks, limiting home runs and getting through innings efficiently. That has prevented Gallardo from joining the elite ranks where we typically find strikeout-per-inning starters. Though he has demonstrated low walk and home run rates at times, the fact is that he has not posted a sub-3.50 ERA in any of the last four seasons, and he has finished with a WHIP below 1.30 just once during that period. While Gallardo is a safe bet for strikeouts and wins, his liabilities in other categories drops him just outside the top 15 starting pitchers.

[Jaime Garcia](#), STL

SP

Statistically, Jaime Garcia's 2012 wasn't all that different from his first two major-league seasons, but in a year when many expected him to take the next step and cross the 200-inning threshold for the first time, he instead went the other way, making only 20 starts. The culprit was tearing in his rotator cuff and labrum, which sidelined him from early June to mid-August and popped up again in the postseason, when he angered teammates by attempting to pitch through pain, risking both his long-term health and their playoff chances. Though most physicians recommended surgery in the offseason, Garcia has chosen to rehab the injury instead, hoping to be ready in time for the start of the regular season. Naturally, fewer expect 200 innings from him this time around. Even at 100 percent, his contributions leave something to be desired. With pitching back on the upswing across baseball, his 1.30-plus WHIP hardly sets him apart, and he doesn't strike out batters at a particularly high rate. Plus, he seems to come unraveled on the road, posting a 4.47 ERA there compared to 2.48 at home for his career. Considering he'll be pitching with an injury that could force him to the operating table at a moment's notice, you wouldn't want to invest more than a late-round pick in Garcia.

Year	GS	INN	W-L	ERA	CG	K	WHIP	FPTS

2011	32	195	13-7	3.560	2	156	1.320	436

Matt Garza, CHC

Matt Garza's 2012 campaign was mired by injuries as he was able to make just 18 starts before an elbow injury ended his season in July. He went 5-7 with a 3.91 ERA in his 18 outings and continued to dominate the National League with 96 strikeouts in 103 2/3 innings pitched. The right-hander also walked just 32 while giving up 90 hits. Garza's elbow has healed and he has been cleared for his normal offseason routine, so the 29-year-old should be fine heading into the 2013 season. Garza has posted some solid numbers since coming to the Cubs in 2011, but poor run support continues to hinder his win total. Still, he has the potential to record 200 strikeouts with a full season of work and has not posted an ERA over 4.00 since his rookie campaign. While there is a slight injury risk, Garza should be gone by the middle rounds in most Fantasy formats on Draft Day.

2011	31	198	10-10	3.318	2	197	1.258	447.5

Dillon Gee, NYM

Dillon Gee was one of the more pleasant surprises in Fantasy on 2011 after going 13-6 with a 4.43 ERA in 30 appearances (27 starts). But the 2012 season didn't begin all that well for Gee, posting a 5.65 ERA in his first seven starts, before eventually getting back on track. His season ended in mid-July, however, as the right-hander underwent surgery to repair a blocked artery in his pitching shoulder. Gee finished 6-7 with a 4.10 ERA in his 17 starts and struck out 97 in 109 2/3 innings pitched. Keep an eye on his progress during the offseason as the 26-year-old is expected to be in the rotation next season as long as he's healthy. With the ability to strike out a healthy amount of batters with a respectable ERA, owners could do worse than Gee in NL-only formats and some deeper mixed leagues in 2013.

2011	27	161	13-6	4.425	1	114	1.375	322

Gio Gonzalez, WAS

Gio Gonzalez has carried the stigma of being a pitcher with immense promise who hadn't fulfilled it due to control issues, but 2012 was the year he shed that label. In every year since his rookie season, Gonzalez has lowered his walk rate, and last year he whittled it down to a respectable 3.4 batters per nine innings. Meanwhile, he posted his highest strikeout rate in three seasons and allowed only nine home runs over 199 1/3 innings. Gonzalez has just the slightest of ground ball tendencies, so he will be a poor bet to match that latter number. He also could have trouble producing another 21 wins, as only Lance Lynn received more run support among qualifying National League starters. So while 2013 promises to be a slightly less productive season, Gonzalez has improved his control to the extent that he can be drafted among the top 15 starting pitchers.

2011	32	202	16-12	3.119	0	197	1.317	469.5

Zack Greinke, LAD

After several years of fluctuating ERAs -- from a Cy Young-clinching 2.16 mark in 2009 to a 4.17 mark the following year to a 3.83 mark in 2011 -- Greinke finally found the appropriate middle ground in 2012, posting a 3.48 mark in a career-high 34 starts between the Brewers and Angels. Measuring it against the high and low points of his career, the 2012 season was quite possibly Greinke in his truest, purest form. Still, you can't help but wonder if he has a little more in store. His numbers took an initial hit when he went from the Brewers to the Angels midseason, his ERA rising over 4.00 after a rocky first five starts. But once he fully adjusted, he was as good as ever, posting a 2.04 ERA in his final eight starts with the Angels. After signing a long-term deal with the Dodgers this offseason, his adjustment period will come in spring training. Once the season starts, not only will he be ready to roll, but he'll be in an environment that clearly

SP

favors pitching, more so than any of the other stops in his major-league career. Even if Greinke repeats his 2012 numbers, he'll have been worth selecting among the top-20 starting pitchers. The potential for him to shave half a run off his ERA and add three or four wins to his tally with an expected contender in Los Angeles bumps him up to a top-15 selection.

2011	28	172	16-6	3.827	0	201	1.200	471.5

Roy Halladay, PHI

The 2012 season was an odd one for Roy Halladay. After years of absolute domination, Halladay's ERA crossed the 4.00 mark for the first time since 2004. It was the first time in a season in which he pitched 100 or more innings that he didn't throw a complete game and the first since 2006 in which he didn't throw a shutout. Making just 25 starts because of a strained lat behind his right shoulder, Halladay's season is likely just an aberration. Yes, he's 35, but Halladay has shown very few signs of aging and still produced a 1.22 WHIP on the season, a mark that most starters would take in a heartbeat. Most of the damage that Halladay inflicted on his ERA was done in September, when he put together a 6.84 ERA in five starts. He only lasted 1 2/3 in one of those, and pitched through shoulder spasms in the season's final start. Give Halladay a pass on his 2012 season. An offseason of rest should return him to elite status for 2013. He will be an early round pick in most formats.

2011	32	234	19-6	2.349	8	220	1.040	681

Cole Hamels, PHI

Cole Hamels entered 2011 as almost the forgotten member of a studly Phillies pitching staff, behind Cliff Lee and Roy Halladay. But when the season was over, it was Hamels who had the best numbers of the trio. Granted, Halladay was hurt and Lee had the ultimate bad luck season (with numbers that were as good, if not better, than Hamels'), and he had only six wins to show for it), but Hamels still had a stellar season, setting personal highs in wins (17) and strikeouts (216). At 29, Hamels is still on the right side of 30 and his situation gets even better when owners consider he'll have the luxury of Chase Utley and Ryan Howard powering the offense from the start of the season. Additionally, Hamels' role as the No. 3 pitcher in the rotation will line him up against lesser pitchers on the other side, putting him in line for more chances at wins. It may not reach the last season's level, but Hamels is in line for another great season in 2013. He will be off the board in the early rounds of most drafts.

SP

[Dan Haren](#), WAS

SP

After the worst of his eight full big-league seasons in 2012 -- one in which he battled reduced velocity and landed on the DL for the first time -- Dan Haren gets an opportunity to return to the National League, where he put together the greatest stretch of his career as a Diamondback from 2008 to 2010. This time, he's headed to Washington on a one-year deal. At age 32, he's certainly capable of getting back on track, but between the reduced fastball and the balky back, it's far from guaranteed. Clearly, enough teams were skeptical that he wasn't able to land a long-term contract in the offseason. Though Haren returned from his DL stint in late July to finish the season a relative high note, posting a 3.58 ERA and 1.12 WHIP in 13 starts, he lasted seven innings only once during that stretch. His ability to pitch deep into games was a big reason why he was so successful earlier in his career. Even if some of the regression Haren suffered in 2012 turns out to be permanent, he's still better than average in Fantasy. Still, expecting him to return to ace numbers is probably unreasonable, even with the return to the NL. Haren is worth targeting among the top 40 starting pitchers in Fantasy.

Year	GS	INN	W-L	ERA	CG	K	WHIP	FPTS

2011	34	238	16-10	3.172	4	192	1.024	618

[Matt Harvey](#), NYM

SP

Matt Harvey forced his way to the majors 2012 after a dominant performance in the minors. His play clearly made a solid impression on the Mets. After posting a 3.68 ERA in 20 starts and striking out 112 batters in 110 innings pitched at Triple-A Buffalo, he received the call in late July and struck out 11 over 5 1/3 shutout innings while winning his major-league debut. The right-hander would allow more than three earned runs just once in his 10 starts down the stretch and went 3-5 with a 2.73 ERA. His 70-to-26 strikeout-to-walk ratio in 59 1/3 innings pitched projects well over a full season and the 23-year-old is expected to compete for a spot in the rotation during spring training. Few young pitchers have as much upside in Fantasy as Harvey and he should be a hot commodity on Draft Day. Don't let Harvey slip too late in most formats as he could be the next young phenom.

Year	GS	INN	W-L	ERA	CG	K	WHIP	FPTS

[Tim Hudson](#), ATL

SP

Despite needing almost all of April to complete his recovery from offseason back surgery, Tim Hudson still managed to win 16 games in 2012, reaching the mark for the third straight year. Though wins aren't the best measurement of a pitcher's ability, his are a testament to the consistency and efficiency that have made him such a highly regarded Fantasy option over the years, even in spite of his limited strikeout potential. At age 37 and with a newly repaired disc in his back, he managed to go seven innings or more in 13 of his 28 starts, and his walk rate kept his WHIP right around 1.20. Because he's a finesse pitcher, he should age more gracefully than most, meaning he likely has a year or two more of this type of production. Some Fantasy owners might be inclined to avoid Hudson just because of his age, but coming off a healthy offseason, he doesn't present all that much risk. If he drops out of the top 50 starting pitchers on Draft Day, he's a bargain.

Year	GS	INN	W-L	ERA	CG	K	WHIP	FPTS

[Edwin Jackson](#), CHC

SP

The crazy, unpredictable career of Edwin Jackson took another unexpected turn in 2012 as he signed on to join the Nationals' potent rotation. Jackson's 4.03 ERA was just 24 points higher than the one he assembled for the Cardinals and White Sox the previous year, but not much else looked similar. Jackson struck out a career-high 8.0 batters per nine innings, thanks in large part to a 13 percent swinging strike rate that was far higher than any he had registered previously. That helped Jackson to shave 22 points off his WHIP to a career-low

1.22. Though it wasn't reflected in his ERA or 10-11 record, in many ways, this was Jackson's finest season. Given his long-standing pattern of inconsistency, along with the fact that he will turn 30 in September, Fantasy owners shouldn't expect him to build on or even repeat his 2012 performance. Jackson can go undrafted in standard mixed leagues, but he is still a must-own in deeper formats, regardless of which team he signs with as a free agent.

2011	31	200	12-9	3.786	1	148	1.437	393

[Kyle Kendrick](#), PHI

RP/SP

Kyle Kendrick didn't have the most impressive numbers of his career in 2012, but they came awfully close to the litany of career-bests he set in 2011, which may have been just as impressive. Perennially close to hitting a stride, Kendrick now has two solid seasons in a row, with a combined 3.61 ERA and 1.25 WHIP. He saw a slight improvement in his strikeout rate in 2012, but Kendrick will never put up gaudy enough numbers for that to be a real asset. He is slated to be the fourth starter for the Phillies in 2013, which should give him a better mindset, as opposed to the constant back-and-forth of starter/reliever status from the last two seasons. Kendrick is solid, but not spectacular. Consider him a late-round option in NL-only leagues.

Year	GS	INN	W-L	ERA	CG	K	WHIP	FPTS

2011	15	115	8-6	3.218	0	59	1.221	229.5

[Ian Kennedy](#), ARI

SP

After showing real promise by dropping his ERA from 3.80 to 2.88 in 2011, Ian Kennedy took a step back in 2012, bringing his ERA back up to 4.01 and his WHIP to 1.30. While it was encouraging that he pitched his third-straight season of 190 innings or more -- and his strikeout rate didn't suffer -- it was still frustrating for Kennedy owners to see signs of momentum get thwarted around every corner. The main culprits? Hits and home runs, both way up from 2011. And a high (.306) BABIP indicates that there's a good chance Kennedy was victimized, at least partially, by bad luck. Expect a return to a sub-4.00 ERA in 2012, with a lower WHIP (Kennedy's walk rate stayed essentially the same in 2012). He should be off most draft boards by the middle rounds.

Year	GS	INN	W-L	ERA	CG	K	WHIP	FPTS

2011	33	222	21-4	2.878	1	198	1.086	643

[Clayton Kershaw](#), LAD

SP

Clayton Kershaw's 2012 wasn't quite as dominant as his 2011, but it still nearly won him a Cy Young award. He finished behind only R.A. Dickey, whose emergence as a self-made ace at age 37 made him a favorite with the media. That's not to say Kershaw was any better than Dickey in 2012, but in other years against other contenders, he might have been a shoo-in for the award. He led the majors in ERA for the second straight year and allowed fewer than seven hits per nine innings for the third time in four. The control problems that plagued him earlier in his career were again a non-issue, with his walk rate of 2.5 per nine innings ranking 43rd among the 88 qualifying pitchers. As one of the few strikeout-per-inning guys capable of throwing 220 innings every year, Kershaw is about as good as it gets in Fantasy, and you wouldn't be crazy to make him the top pitcher selected on Draft Day. Justin Verlander is about the only other pitcher who would have a claim to that honor.

Year	GS	INN	W-L	ERA	CG	K	WHIP	FPTS
2013 (proj)	33	230	19-7	2.426	3	238	1.039	681
2012	33	228	14-9	2.530	2	229	1.023	623.5
2011	33	233	21-5	2.276	5	248	0.977	731

Mat Latos, CIN

After a shaky start to 2012 -- including a 4.42 ERA through June -- Mat Latos went on a roll the second half of the season, finishing with a 3.48 ERA and 1.16 WHIP, numbers that were actually improvements over his 2011 season in spacious PETCO Park. Latos finished with the same amount of strikeouts (185) as he did in 2011, and while he gave up nine more home runs (25 in 2012, 16 in 2011), he lowered both his walk and hit rates. Latos, in short, made the transition from an extreme pitcher's park to an extreme hitter's park and didn't seem to miss a beat once it was all said and done. And the fact that he made the adjustment in-season makes his 2013 look even more promising, as he appears to have figured out how to pitch in the smaller park. Latos is capable of sporting a low ERA and WHIP while striking out close to a batter per inning. He slots perfectly as a Fantasy team's No. 2 starter and should be off the board in the early middle rounds of most drafts.

Year	GS	INN	W-L	ERA	CG	K	WHIP	FPTS
2013 (proj)	33	210	15-10	3.557	2	191	1.167	515.5
2012	33	209	14-4	3.482	2	185	1.161	524.5
2011	31	194	9-14	3.473	0	185	1.183	422.5

Mike Leake, CIN

Mike Leake failed to capitalize on his breakout 2011 season (12 wins, 3.86 ERA, 1.18 WHIP) by putting up a rather uneven 2012: 8-9 with a 4.58 ERA and 1.35 WHIP. He doesn't strike out a lot of batters -- 234 in 346 2/3 innings over the last two years -- so Leake's value lies in a low ERA and WHIP. And he failed to deliver last season. Like his rotation-mate Homer Bailey, Leake was plagued with inconsistency, following up strings of promising starts with runs of shellackings. He got his ERA below 4.00 just once the entire season and it looks like he will be the odd man out with Aroldis Chapman's transition to the rotation. On another team, Leake might be a No. 3 starter, but with the Reds' stellar rotation, a 4.58 ERA just won't cut it. Leake is best left on the waiver wire in mixed leagues, but could be a nice bench addition in NL-only leagues, in case disaster strikes the Cincinnati rotation.

Cliff Lee, PHI

Many years from now, historians will look at Cliff Lee's 2012 line and scratch their heads. Despite pitching over 200 innings for the fifth consecutive season, striking out 207 batters (ninth in MLB) and finishing with a 3.16 ERA (15th in MLB) and 1.11 WHIP (10th in MLB), Lee ended the year with just six wins. Just for context, Jason Marquis, Carlos Zambrano and Rex Brothers all had more wins than Lee last season. This is the definition of "fluke." There is no way Lee puts up similar numbers in 2013 -- and, let's be frank, they could actually improve -- and finishes with fewer than 15 wins. Cole Hamels had a nearly identical stat line and had 17 wins. Unlike 2011, the Phillies will be starting the season with Ryan Howard and Chase Utley in the lineup, giving them even better win probability. Lee, who failed to pitch a complete game for the first time since 2004, remains one of the best starters in baseball. His 2012 season just shows how insane it can be to chase wins in Fantasy. He will be an early round pick in most drafts.

Ted Lilly, LAD

Ted Lilly is a big question mark heading into 2013. Shoot, he was a big question mark for most of 2012. He went down with a seemingly innocuous shoulder injury in late May and just never made any progress, ramping up for rehab a couple times only to have to shut it down again. He finally submitted to a clean-up procedure in September and has been out of the spotlight ever since. No one can say for sure whether or not he'll be ready to pitch at the start of 2013, and no one can say for sure whether he'll have a rotation spot if he is. He should still have something left in the tank at age 37. He doesn't throw particularly hard and

SP

has excellent control. Given the uncertainty surrounding him, though, you're better off waiting to put in a waiver claim for Lilly than investing a late-round draft pick in him in mixed leagues.

Tim Lincecum, SF

Few pitchers caused more consternation among Fantasy owners last season than Tim Lincecum. He was consistently awful in the first half, turning in a 6.42 ERA at the All-Star break, and owners were starting to bench the two-time Cy Young award winner. Lincecum's command seemed to return after the break, as he turned in three quality starts in his first four times out while walking only seven batters in 26 2/3 innings. Soon, though, he was back to his old ways, and he finished the season with a 5.18 ERA, 1.47 WHIP and a 10-15 record. The one bright spot for Lincecum was his strikeout rate, which was greater than a batter per inning for the sixth year in a row, even though his velocity was down substantially. Given the persistence of Lincecum's woes, a return to his previous form is far from a given, and there are few signs of a sustained rebound on which owners can hang their hopes. Because he is just one season removed from being a top 20 starting pitcher, owners can't be faulted for drafting Lincecum in standard mixed leagues. However, even the most generous of us might have to stretch to see him as even a top 40 starter going into 2013.

Francisco Liriano, PIT

Francisco Liriano continued to befuddle Fantasy owners in 2012 -- posting his second straight season with an ERA above 5.00 (5.34 in 2012), but giving just enough tantalizing glimpses of his talented arm to give him consideration in drafts this season. After a mid-season trade from the Twins to the White Sox, Liriano actually got worse, raising his ERA and WHIP, while lowering his strikeout rate. But the stupid month of June, where Liriano put up a 2.87 ERA and 0.93 WHIP, is what keeps gnawing at the brains of Fantasy owners everywhere. You want to dismiss Liriano, you want to hate him and leave him for some other team to draft, but a little devil on your shoulder reminds you of his past brilliance. And Exhibit A of him possibly returning to it is the month of June. Exhibit B -- and probably a much better argument to make -- is his chance to work with Pirates pitching coach Ray Searage, who turned around A.J. Burnett in 2012 and fixed James McDonald for most of the year, as well. Liriano has a career 4.40 ERA and 1.35 WHIP. He can still get strikeouts, but owners have to be willing to pay a high price in other categories if Searage can't get through to him. There's talent there, but there are just as many questions. If you're feeling lucky, he can be had in the late rounds of most drafts. But know there is a very steep downside if things don't go as planned in Pittsburgh.

SP

[Kyle Lohse](#), MIL

Kyle Lohse won't rank among the top 15 starting pitchers in 2013 like he did in 2012. That's the general consensus anyway, and it seems reasonable enough. Of course, the danger in that line of thinking is the overcorrection, the tendency to avoid him at all costs instead of just the unreasonable ones. A repeat performance would be too much to ask, yeah, but it wouldn't be like lightning strike twice. Dismissing Lohse's 2012 diminishes what he accomplished in 2011, when he went 14-8 with a 3.39 ERA and 1.17 WHIP. The better approach is to, yes, treat his 2012 as the exception rather than a rule, but also to use it as validation of his 2011, which itself seemed like an aberration this time a year ago. Now that he's proven he can go 200 innings again after battling elbow troubles in 2009 and 2010, you should feel comfortable projecting Lohse's 2011 rates over his 2012 workload, which would make him something like another Tim Hudson. Granted, leaving the Cardinals for another organization this offseason brings an added element of risk, but it's also another excuse for people to let him slide. If you target Lohse after the top 40 starting pitchers or so have gone off the board, you have the right idea.

Year	GS	INN	W-L	ERA	CG	K	WHIP	FPTS

2011	30	188	14-8	3.393	1	111	1.168	432.5

[Lance Lynn](#), STL

In 2012, Lynn made the transition from the bullpen to the starting rotation, where he spent most of his minor-league career, and though the overall numbers suggest it was a smashing success -- he won 18 games and made the All-Star team -- it had its share of ups and downs. Like many young pitchers, Lynn seemed to struggle with the accumulation of innings, his ERA rising from 3.41 in the first half to 4.32 in the second. Hoping to slow down the accumulation and perhaps give his arm a break, the Cardinals moved him back to the bullpen for a couple weeks late in the season. It seemed to work. When he returned for four starts in September, he went 4-0 with a 2.19 ERA, 1.05 WHIP and 10.9 strikeouts per nine innings. If his season had ended there, chances are we'd all regard Lynn, with his strikeout-per-inning potential and excellent supporting cast, as one of the most impressive up-and-comers at his position. But then came the postseason, when he couldn't get through four innings in either of his two starts. Now, his job isn't entirely secure entering 2012. He's a favorite for a rotation spot, but the Cardinals could always fall back on youngsters like Shelby Miller, Joe Kelly and Trevor Rosenthal. Lynn still has top-25 potential, but don't be surprised if he drops out of the top 40 on Draft Day.

2011	2	35	1-1	3.115	0	40	1.038	84

[Paul Maholm](#), ATL

Paul Maholm hasn't gotten a lot of attention in Fantasy over the years, but the Braves were so intrigued by what he brought to the table last July that they were willing to serve up pitching prospect Arodys Vizcaino for him. After joining the Braves, Maholm did a nice job, pitching seven innings or more in five of his 11 starts. He's not much of a bat-misser, but he throws the ball over the plate and keeps the score close, which could lead to a decent number of wins for an expected contender in Atlanta. Perhaps that's why Maholm has been so overlooked in Fantasy up to this point: Prior to joining the Braves, he had pitched for the Pirates and the Cubs, non-contenders both. Granted, for most of his time with the Pirates, Maholm allowed too many baserunners to matter in Fantasy, but at this stage of his career, his contributions really aren't so different from Tim Hudson's. And you've seen the kind of win-loss records Hudson has produced in Atlanta. Granted, Maholm doesn't have the track record of Hudson, so you shouldn't invest all that much in him on Draft Day, but for a pitcher who'll likely go undrafted in mixed leagues, he could surprise.

2011	26	162	6-14	3.659	1	97	1.294	262.5

SP [Shaun Marcum](#), NYM

After making 64 starts over the previous two seasons, an elbow injury cost Shaun Marcum more than two months of the 2012 season. Marcum scuffled in the eight starts he made for the Brewers after coming off the disabled list in late August, tarnishing an otherwise solid season. Prior to his DL stint, Marcum did his usual good job of throwing strikes and avoiding hits on balls in play, leading up to a 5-3 record, 3.39 ERA and 1.17 WHIP through 13 outings. Marcum's poor finish helped to produce a 3.70 ERA and 1.27 WHIP, which were his highest marks since becoming a full-time starter in 2008. Between his elbow woes and mediocre season-end stats, expectations may be lowered for Marcum heading into 2013, but by and large, he has been consistently effective. He's bounced back from his 2008 Tommy John surgery and a poor finish in 2011, so owners shouldn't get too sour on Marcum's prospects for the coming season. With his move to the Mets, he gets a more pitcher-friendly home park in Citi Field. With that added bonus, Marcum is worth targeting in the middle-to-late rounds in standard mixed leagues.

2011	33	201	13-7	3.543	0	158	1.156	486

[Brandon McCarthy](#), ARI

Brandon McCarthy's triumphant transformation into a highly effective control artist continued into the early months of the 2012 season, but owners will likely remember the difficulties he endured rather than his strong performance. McCarthy's campaign was first derailed by a seven-week disabled list stint for shoulder soreness. Then less than a month after returning, McCarthy was hit in the head by an Erick Aybar line drive that required brain surgery. McCarthy not only emerged from a life-threatening situation, but by November, he had been cleared to resume baseball activities. Now on the free agent market, McCarthy may have to contend with pitching his home games away from Oakland, and that's not a good thing for his value. Over the last two seasons, McCarthy has posted a 2.74 ERA at home and a 3.87 ERA on the road. With another club, McCarthy will still be worth drafting in standard mixed leagues, but he can be saved for the later rounds.

2011	25	171	9-9	3.322	5	123	1.131	383.5

[James McDonald](#), PIT

After years of promise, James McDonald finally gave owners some hope that he was going to take his game to the next level in 2012. He went 9-3 with a 2.37 ERA in his first 17 starts while striking out 100 in 110 innings pitched. Snubbed from the midsummer classic, the right-hander was not the same after the All-Star break as he posted a 7.08 ERA over his final 12 outings and was moved to the bullpen in September. Hopefully the Pirates will be able to figure out the flaw that caused the 28-year-old to fall off so dramatically last season and get him back to being a reliable option in Fantasy. Just like last year, McDonald has the ability to be a boom-or-bust pick on Draft Day but given his potential, target him in the middle-to-late rounds in most formats.

[Kris Medlen](#), ATL

RP/SP

Kris Medlen had a nice little run as a starter before needing Tommy John surgery in 2010, but nothing that would lead you to believe he was capable of doing what he did over the final two months of 2012. Then again, no one should be capable of going 9-0 with a 0.97 ERA, 0.80 WHIP and 9.0 strikeouts per nine innings over a 12-start stretch. That's Greg Maddux-type stuff. And here's the kicker: Those were the only starts Medlen made all season, having spent the first four months in the bullpen. Saying he made the most of what little opportunity he had almost doesn't do the performance justice. Considering it came at a make-or-break point as far as Fantasy is concerned, Medlen is a hero to many right now. And that's why he's so difficult to rate in Fantasy. On the one hand, you don't want to judge a guy on only 12 starts, but on the other hand they were 12 incredible starts. Plus, his minuscule walk rate and superior secondary pitches suggest the results weren't so far-fetched. Factor in his relief pitcher eligibility and Medlen is a one-of-a-kind Fantasy option. He isn't Justin Verlander or Clayton Kershaw. He isn't even Madison Bumgarner or James Shields. But he isn't far off either. If you're the type willing to gamble on a limited track record, you won't want to let him slip too far beyond the top 15 starting pitchers.

2011	0	2	0-0	0.000	0	2	0.429	7

[Wade Miley](#), ARI

SP

Wade Miley came out of nowhere to attain Fantasy relevance in 2012. The rookie finished the year 16-11 with a 3.33 ERA and 1.18 WHIP. He struck out 11 batters and gave up just 14 home runs. Miley wasn't a top prospect (although he was a sandwich pick for Arizona in 2008), but he came into last season with a 3.69 ERA and 1.35 WHIP in the minors, so there wasn't much expected of him. Miley, though, kept a steady hand throughout the season, with his ERA under 3.50 in every month until September, when he likely encountered a little fatigue at the end of a long season, in which he hit 194 2/3 innings. There will be doubters -- Miley's 2012 could be seen as Ivan Nova's 2011, for instance -- and those doubters will allow Miley believers to snag him cheap on Draft Day. Expect him to be available in the later rounds for the fourth or fifth starter on most teams.

2011	7	40	4-2	4.500	0	25	1.650	76.5

[Shelby Miller](#), STL

RP/SP

Though he was long considered the top prospect in the Cardinals organization, Shelby Miller's stock nearly collapsed when he compiled a 6.17 ERA over his first 17 starts at Triple-A Memphis last year. But the way he ended the season, with a 1.32 ERA, 0.95 WHIP and 10.5 strikeouts per nine innings in six appearances (including one start) for the big club, has many thinking he's a favorite for NL Rookie of the Year honors this year. His struggles at Triple-A weren't as much a matter of health or ability as stubbornness and pride. Though the command of his fastball was off, he relied on the pitch more than ever. Eventually, the Cardinals forbade him from shaking off the catcher, and that's about the time his season turned around. A mechanical adjustment also contributed to his 2.88 ERA over his final 10 starts. The harsh lesson clearly translated to the majors, where he overpowered hitters with a high-90s fastball and sharp curveball. With the departure of Kyle Lohse this offseason, Miller is presumably in line for a rotation spot, but the Cardinals have a few other up-and-comers in Lance Lynn, Joe Kelly and Trevor Rosenthal. Miller's upside is the most attractive of that group, but his uncertain role will allow him to slip to the late rounds on Draft Day.

2012	1	14	1-0	1.317	0	16	0.951	43

[Mike Minor](#), ATL

SP

For the first three months of 2012, the Braves probably wondered if they had

placed their faith in the wrong guy in Mike Minor, who seemingly was ready to turn the corner in his third big-league season but who instead had a 6.20 ERA in 15 starts. The problem was the home runs. He had allowed 18 of them, all in his last 12 starts, and nobody was more aware of it than him. All those home runs led to frustration, which led to walks, which led to prolonged innings, which led to more homers -- many of them of the two- and three-run variety. Once Minor made a point not to let the home runs faze him, he stopped serving up so many, and his walk rate improved as well. The turning point came at the beginning of July. From that point forward -- another 15 starts -- he went 7-4 with a 2.21 ERA, 0.86 WHIP and 7.0 strikeouts per nine innings. He never allowed more than one homer in a game during that stretch, and he issued 1.7 walks per nine innings compared to 4.0 in his first 15 starts. How's that for a breakthrough? Because it happened midseason, many Fantasy owners might not be aware of it, which is why you have a good chance of nabbing Minor after the top 40 starting pitchers have gone off the board. Clearly, he's a bargain at that point.

Year	GS	INN	W-L	ERA	CG	K	WHIP	FPTS
2013 (proj)	32	195	13-10	3.923	1	162	1.231	439

2011	15	83	5-3	4.137	0	77	1.488	159.5

[Chris Narveson](#), MIL

SP

After spending the bulk of the previous two seasons in the Brewers' rotation, Chris Narveson made just two starts in 2012. Rotator cuff surgery put a premature end to Narveson's season, but he is expected to be back for the beginning of spring training. Zack Greinke, Shaun Marcum and Randy Wolf -- all part of the rotation a year ago -- have each moved on, but the mass turnover doesn't mean that Narveson is guaranteed a job as a starter. Marco Estrada and Mike Fiers emerged as key members of the rotation last season, and Mark Rogers, Wily Peralta, Tyler Thornburg and Hiram Burgos will get opportunities to be starters in 2013. Even if Narveson secures a place in the rotation out of camp, it doesn't mean he will keep it or improve on his mediocre stats of the past. He is merely an NL-only option.

[Juan Nicasio](#), COL

SP

Juan Nicasio rocketed his way from Double-A Tulsa to the majors in 2011, but since then, his career has been more about overcoming adversity than taking the fast track to stardom. In his rookie season, Nicasio took a line drive to the head and suffered a broken neck, but he managed to come back from that potentially devastating injury to be in the Rockies' rotation to start the 2012 season. After 11 mostly difficult starts, Nicasio's season ended early again, as he underwent microfracture surgery on his left knee. Even in the midst of a season that produced a 5.28 ERA and 1.62 WHIP, there were some good signs, as Nicasio struck out 54 batters in 58 innings and made four quality starts over his first seven outings. However, his poor stats were no mirage, as he had trouble throwing strikes and inducing grounders. Nicasio could wind up contributing for owners in standard mixed leagues at some point in 2013, but there is still enough risk with him that he should only be drafted in deeper formats.

Year	GS	INN	W-L	ERA	CG	K	WHIP	FPTS

2011	13	72	4-4	4.144	0	58	1.270	148

Jonathon Niese, NYM

SP

Jonathon Niese had the breakout campaign in 2012 that owners had been waiting for, posting career highs in almost every statistical category. He went 13-9 with a 3.40 ERA in 30 starts and struck out 155 in 190 1/3 innings pitched while walking just 49. It was the first time he posted an ERA under 4.00 and he made 30 starts for the second time in the last three seasons. The left-hander dealt with a rapid heartbeat a couple of times during the season, but underwent a procedure during the offseason and should be fine going forward. At age 26, he could just be scratching the surface of his potential, but keep in mind the fences at Citi Field are being moved in before the season starts. Niese had a 3.74 ERA in his 15 starts at home in 2012. Still, he appears to be on the verge of becoming a solid option in Fantasy so target him in the middle-to-late rounds in most formats on Draft Day.

Year	GS	INN	W-L	ERA	CG	K	WHIP	FPTS

2011	26	157	11-11	4.405	0	138	1.411	304

Ricky Nolasco, MIA

SP

Though Ricky Nolasco hasn't compiled a sub-4.00 ERA since 2008, he had some sleeper appeal as recently as two years ago. Nolasco would tease Fantasy owners with an exceptional strikeout-to-walk ratio, but he would frustrate them with a high ERA, which resulted from stranding too few base runners. He still has issues with allowing runners to score, but over the last two seasons, he has made matters worse by putting runners on at a much higher rate. In 2012, this double whammy resulted in a 12-13 record, a 4.48 ERA and a 1.37 WHIP. On the plus side, he has become a better ground ball pitcher, but even though he is keeping more balls in the park, it's not helping Nolasco put up Fantasy stats that owners can use outside of deep leagues. In fact, there are few owners who should think about drafting him outside of NL-only leagues.

2011	33	206	10-12	4.675	2	148	1.398	358

Roy Oswalt, COL

SP

Roy Oswalt got a bit of a raw deal in 2012, bouncing around between starter and reliever with no set role. He finished the year with a 5.80 ERA and 1.53 WHIP. There's very little to cull from Oswalt's 59-inning performance last season, outside of the fact that he likely made the wrong choice with which team to join. The owner of a 3.21 ERA leading into last year, Oswalt, 35, can still pitch, but he's probably better off in the National League and with a team that has room for him in the rotation, so he doesn't have to wonder what his role will be. If he signs with a team by Draft Day, Oswalt is a single-league only play in the later rounds. If he's still playing the "I will decide soon which team to pitch for" game, leave him undrafted. Without a role, Oswalt is not worth the roster spot.

Wily Peralta, MIL

SP

Wily Peralta has had his problems finding the plate, but the hard-throwing righty has been among the Brewers' most intriguing prospects due to his ability to keep the ball down and in the park. That skill helped Peralta earn his first chance to start in the majors, as he was called up last September. In five late-season starts, Peralta went 2-1 with a 2.25 ERA, as he did not yield a single home run and held opponents to a .266 slugging percentage. Peralta will compete for a rotation spot this spring, though he'd certainly be hard-pressed to match his September mastery if he wins a job. He could actually be a liability in WHIP, but Peralta should help enough with strikeouts and ERA to be a viable option in NL-only leagues.

Clayton Richard, SD

SP

Long one of the primary beneficiaries of PETCO Park's spacious dimensions, Clayton Richard put together his best season yet in 2012, setting a career high in innings and a career low in WHIP. The former was what really made the difference in Fantasy. With 218 2/3 innings, ninth-most in all of baseball, he established himself as one of the top innings-eaters in the game. Of course, he likely wouldn't have reached that mark if not for the benefits of his home ballpark. Considering he led the NL in both hits and home runs allowed, Richard's 4.74 road ERA might have applied across the board if he had played in a fairer venue. And therein lies the problem heading into 2013. The Padres opted to move in the fences this offseason, hoping to make their park play fairer. If it translates to more home runs overall for Richard, you may not want him pitching all those innings. Because he's not a particularly good source of strikeouts or wins, you don't have much reason to gamble on him in standard mixed leagues, but don't be surprised if he ends up emerging as a serviceable matchups type later in the season.

Wandy Rodriguez, PIT

SP

Wandy Rodriguez took a step back in Fantasy last season and saw a change of scenery after going 7-9 with a 3.79 ERA in 21 starts for the Astros. He was traded to the Pirates at the deadline and went 5-4 with a 3.72 ERA in 13 appearances (12 starts) down the stretch. The 3.76 ERA he finished with was his worst mark since 2007 and he also posted his lowest strikeout total (139) since 2008. The left-hander had been a reliable option in Fantasy despite pitching in the hitter-friendly Minute Maid Park, but at age 33, he could be on the downside of his career. Rodriguez should see better run support in Pittsburgh and those owners who think he can bounce back should target him in the middle-to-late rounds on Draft Day. Leaving him for deeper formats could be a safer bet, however.

Hyun-Jin Ryu, LAD

SP

If you think assessing pitchers who come over from Japan is difficult, good luck trying to get a read on Hyun-Jin Ryu, who will be the first player from the eight-team Korea Baseball Organization to go directly to the major leagues. And, yes, he will go directly to the major leagues. Even if, after taking a look at him this spring, the Dodgers decide he needs more work, they can't send him to the minors without his consent. It's one of the many details in his six-year, \$36 million contract. By leaving themselves so vulnerable, the Dodgers must have some level of confidence in Ryu's ability, but who knows? General manager Ned Colletti agreed to the deal without even seeing the left-hander pitch. What little we do know about Ryu is that he has a fastball that sits in the low-90s -- not bad for a left-hander -- and an excellent changeup. The complete package, according to limited scouting reports, is something in the neighborhood of a No. 3 starter, but given the number of variables that could influence his performance, defining him in such terms is probably pointless. A fair expectation for Ryu is something like what Wei-Yin Chen did last year. The allure of the unknown might make him a middle-rounder on Draft Day, but you're better off waiting until the late rounds to take him.

Year	GS	INN	W-L	ERA	CG	K	WHIP	FPTS
2013 (proj)	31	190	12-11	3.789	0	152	1.321	398

[Jeff Samardzija, CHC](#)

Jeff Samardzija was one of the more pleasant surprises in Fantasy last season as he became a reliable starter for the Cubs after spending much of his first four seasons in the bullpen. He won a spot in the rotation out of spring training and went 5-3 with a 3.13 ERA in his first 11 starts. His high strikeout ratio put him on the Fantasy map immediately, but like all young starters he had some bumps in the road. The Cubs did their best to give him extra rest wherever they could and he appeared to get stronger as the season went, posting a 2.58 ERA over his final 11 starts. Samardzija finished the year 9-13 with a 3.81 ERA in 28 outings and struck out 180 in 174 2/3 innings pitched. He heads into the 2013 campaign with loftier expectations and still has a ton of upside at age 28. With the ability to post more than a strikeout per inning with a respectable ERA, Samardzija should be gone by the middle rounds in most formats on Draft Day. Keep in mind that poor run support in Chicago will likely limit his wins.

2011	0	88	8-4	2.966	0	87	1.296	195.5

[Tim Stauffer, SD](#)

At this time last year, Tim Stauffer looked like he was finally on the verge of becoming a respectable starting pitcher in Fantasy. After years of injury woes, the former first-round pick of the Padres had just completed his first full season as a big-league starter, compiling a 3.73 ERA in 185 2/3 innings. But he didn't need long to revert to his old ways, straining his right triceps in spring training and missing the first six weeks of the season. He returned for exactly one start in mid-May before going back on the DL with a strained right elbow -- an injury that, apart from a futile attempt at a rehab assignment in August, ended his season. He had surgery to repair the flexor tendon in his elbow after the season and is looking for a new home now. With the timetable for his return uncertain, he's unlikely to land with a team that promises him a rotation spot. Stauffer is a name to remember in deeper Fantasy leagues if he gets a shot midseason -- he has proven to be a competent major-league pitcher, after all -- but you have no reason to target him on Draft Day.

[Stephen Strasburg, WAS](#)

Stephen Strasburg's 2012 season may be best remembered for the controversy around the innings limit imposed by the Nationals, as he was shut down in early September after tossing 159 1/3 frames. While Fantasy owners were likely frustrated by not getting more innings from Strasburg down the stretch, they should feel good about the quality of the innings he did provide. In his first "almost full" season coming off Tommy John surgery, Strasburg struck out 197 batters in addition to giving owners 15 wins, a 3.16 ERA and a 1.15 WHIP. He wasn't far off the pace he set in his first 12 major league starts in 2010, just prior to surgery, proving that his rookie performance was no fluke. That said, Strasburg did show some vulnerability over his final six starts, as he had some mild control problems and posted a 3.94 ERA and a 1.25 WHIP, averaging only 5 1/3 innings per start over that stretch. Maybe Strasburg tired toward the end of a long season, or maybe he had a slump just like the ones even the best pitchers get. Neither the severity nor the duration of this downturn were enough to raise concerns, so Fantasy owners can safely trust Strasburg as a top 10 starting pitcher, especially now that he is expected to pitch a true full season.

2011	5	24	1-1	1.500	0	24	0.708	71

[Jacob Turner, MIA](#)

As one of the Tigers' prized prospects, Jacob Turner entered spring training in 2012 as a leading candidate to be the team's fifth starter. Turner did have some memorable moments in his rookie season, but not until first sustaining a shoulder injury in March, struggling in the minors and getting shipped to Miami

SP

in the deal that brought Anibal Sanchez and Omar Infante to Detroit. The Marlins didn't waste much time getting Turner into their rotation, calling him up after just five starts at Triple-A New Orleans. In seven starts with the Marlins, Turner turned in a 3.38 ERA and a sparkling 0.98 WHIP. That strong finish, along with the decimation of the Marlins' rotation via trade, all but cements Turner's spot in the 2013 rotation. Though he doesn't profile as a strikeout pitcher, Turner's control is good enough that he should be an asset in the ERA and WHIP categories. That should be enough to warrant owners using a late round pick on him in deeper mixed leagues.

2011	3	13	0-1	8.526	0	8	1.658	3

[Ryan Vogelsong, SF](#)

Ryan Vogelsong's journey from baseball oblivion to a spot on the National League All-Star roster was a great story in 2011, but after more than a decade of Fantasy irrelevance, could Vogelsong provide an encore? It turns out he could and he did. Though Vogelsong's ERA rose from 2.71 to 3.37, he did plenty to keep the trust of Fantasy owners last season, as he improved in wins, strikeouts and WHIP. As in his first season with the Giants, Vogelsong got an assist from AT&T Park. At home, he compiled a 2.86 ERA while putting up a far less impressive 3.87 mark on the road. Vogelsong was far better at preventing hits on balls in play and stranding baserunners at AT&T Park, but then again, there's no particular reason why Vogelsong -- or any pitcher -- would do those things better at one venue than at another. Looking at Vogelsong's overall body of work from the last two years, he has decent command, limits the long ball and has stranded a lot of runners. While he would be a safer bet if he were a bona fide strikeout pitcher, Vogelsong has shown that he can be trusted with a pick in the middle rounds of standard mixed league drafts.

[Edinson Volquez, SD](#)

If you assumed Edinson Volquez, as an extreme groundball pitcher with a high strikeout rate, would be immune to the PETCO Park effect in his first season with the Padres last year, you were quickly proven wrong. Volquez had a 2.95 ERA at his expansive home compared to a 5.60 mark everywhere else. A disproportionate home run rate was the main culprit. Home runs are especially bad for Volquez because he allows so many baserunners, having led the majors with 105 free passes last year, so when he's unable to avoid them, his ERA skyrockets. Guess he needs that big ballpark after all, huh? Unfortunately, that big ballpark is getting just a bit smaller with the Padres' decision to move in the fences this offseason. If Volquez's combined home run rate rises back up to 1.0 per nine innings, he could be in some trouble. The safe bet in Fantasy is to target him as a strikeout specialist in the late rounds and hope he exceeds your expectations in other areas. Considering he hasn't produced an ERA below 4.00 since 2008, safe to say you don't have to worry about missing out on an ace if you pass him up.

SP

[Adam Wainwright](#), STL

SP

Adam Wainwright showed in 2012 why most pitchers wait longer than a year to come back from Tommy John surgery. He pushed it after the minimum 12 months, and his numbers suffered as a result. The Fantasy owners who drafted him expected him to return to ace form, but after 16 starts, he had a 4.75 ERA and 1.34 WHIP. Granted, the ones who stuck with him were rewarded with a 3.18 ERA and 1.16 WHIP over his final 16 starts, but by then, so many had turned their attention to Fantasy Football that Wainwright still hasn't entirely restored his reputation. Perhaps you can use that to your advantage on Draft Day. First of all, put to rest any of your concerns about his first-half struggles. His location was off as a result of the early return from surgery and it led to twice as many home runs and a bunch more hits than he gave up in the second half. His second half showed that he's back, and "back" for him means Cy Young contention. From that perspective, Wainwright a value as a top-25 starting pitcher and in some leagues with less astute owners that simply look at where he ranked in 2012, he might even fall further than that.

2011	0	0	0-0	0	0	0	0	0

[Jake Westbrook](#), STL

SP

By now, you should know what Jake Westbrook is capable of doing for your Fantasy team. The 35-year-old has been around since 2000 and has delivered more or less the same mediocre numbers since 2003. The Cardinals like him because he's an assured 180-210 innings every year (he fell a little short in 2012 because of a late-season oblique injury), but in terms of actual production, he just doesn't bring much to the table. At his best, he'll keep his ERA below 4.00 and his WHIP below 1.40, but with few strikeouts and a whole heaping helping of hits. Though he may be worth using as a matchups type at some point in 2013, Westbrook is simply too boring to draft in standard mixed leagues. And who knows? With youngsters like Shelby Miller, Joe Kelly and Trevor Rosenthal waiting in the wings, the Cardinals may ultimately decide he's too boring to keep in the starting rotation.

Year	GS	INN	W-L	ERA	CG	K	WHIP	FPTS

2012	28	175	13-11	3.968	1	106	1.391	333
2011	33	183	12-9	4.664	0	104	1.533	302

[Travis Wood](#), CHC

SP

Travis Wood was traded from the Reds to the Cubs last offseason and began the season at Triple-A. He joined the rotation in the big leagues in May, however, and would remain there for the rest of the season. The left-hander went 6-13 with a 4.27 ERA in his 26 starts and struck out a career-high 119 in 156 innings pitched. The Cubs love what the 26-year-old brings to the table and Wood should be a part of the opening day rotation in 2013. Owners should be aware that Wood posted a 4.52 ERA in 14 starts at Wrigley Field in 2012, but he pitched fairly well against the NL Central and still has some decent upside in Fantasy. Wood might be worth a look in some deeper mixed leagues on Draft Day but plan on leaving him more so for NL-only formats.

2011	18	106	6-6	4.840	0	76	1.491	179

[Jordan Zimmermann](#), WAS

SP

At first glance, Jordan Zimmermann had an outstanding 2012 with the Nationals, finishing with a 12-8 record, 2.94 ERA, 1.17 WHIP and a 75 percent quality start rate. However, Zimmermann's season could have been so much more if not for a late-season slide. Only four of his last nine outings were quality starts and Zimmermann didn't pitch as many as seven innings in any of them. His ERA over that stretch was 4.65, as he was frequently hammered, as reflected by high flyball and line drive rates. Zimmermann's curveball had lost some of its effectiveness, as PitchFX data reveals it did not have as much horizontal movement over his final nine starts. If mechanical issues are to blame, and if Zimmermann can address them, he could be among the top 30

starting pitchers in Fantasy. However, there is a risk that he could perform more like a late-rounder whom you might not want to start every week.

2011	26	161	8-11	3.180	1	124	1.147	346

[Barry Zito](#), SF

SP

It would be an exaggeration to say Barry Zito had a strong season, but it was certainly miles ahead of his injury-plagued, ineffective 2011 campaign. His 4.15 ERA and 1.39 WHIP probably didn't wow Fantasy owners, but he did win 15 games with some solid run support. At age 34, Zito is well past the point of generating expectations of growth, but in 2012 he did post his lowest walk rate in eight years. If Zito can merely maintain this level of control he will at least put himself in a position to pick up wins and post an ERA that is in the neighborhood of the league average. That may not sound like a ringing endorsement, but it does make Zito good enough to draft in NL-only leagues and to stream in deeper mixed leagues.

Relief Pitcher

Mike Adams, PHI

RP option, even in those formats.

Mike Adams has been among the more reliable middle relievers in baseball for the past five seasons, compiling a 1.98 ERA and 0.99 WHIP while striking out a batter per inning over that span. His 2012 campaign with the Rangers produced one of his less-spectacular lines in recent memory (3.27 ERA, 1.40 WHIP), but it was hurt by a 4.15 ERA in nine September appearances, brought on by a neck sprain and thoracic outlet syndrome. Adams had surgery for the TOS, and should be ready for 2013, where he will pitch in middle relief for the Phillies. Consider Adams a deep NL-only option, able to help in ERA and WHIP while providing some strikeouts, as well.

2011	74	5-4	1.466	74	0.787	2	5	217

John Axford, MIL

RP

John Axford has been a successful closer in spite of poor control, but in 2012, he showed that there are limits to how much wildness one can get away with. Walking 39 batters over 69 1/3 innings, Axford's WHIP ballooned to 1.44. He still managed to notch 35 saves, but he cost himself several more, as he blew nine save opportunities and missed others due to being yanked out of the closer's role temporarily. Just as damaging as the walks -- and far less expected -- were the 10 home runs that Axford yielded, as compared to the five he allowed over the previous two seasons combined. If the Brewers had another viable closer in their bullpen, Axford might not have had the chance to reclaim his job, but he did, and the Brewers could be equally patient with him, if need be, in 2013. As recently as 2011, Axford had a relatively modest walk rate, so the potential is there for him to rebound and be a top closer again. He will come more cheaply after such a difficult season, so owners can wait until the middle-to-late rounds to draft him in standard mixed leagues.

Anthony Bass, SD

RP/SP

Last year, in his first full major-league season, Anthony Bass had an uneven performance that didn't exactly clarify his role going forward. The Padres liked his performance as a reliever in 2011 enough to give him a look as a starter early in 2012, and his first eight starts, he looked a mainstay, posting a 2.94 ERA and 1.20 WHIP with more than a strikeout per inning. But then, he endured a rocky six-start stretch that inflated his ERA by nearly two runs and culminated with a trip to the DL for shoulder inflammation. When he returned in late September, it was as a reliever, and though he produced a 2.79 ERA in seven appearances, his strikeout rate during that stretch suggests his stuff wasn't quite up to snuff. So how much did the injury influence his performance? Is it completely behind him now? Will the Padres give him another shot as a starter, or is he confined to the bullpen indefinitely? It's all a guessing game right now. Because he throws relatively hard, his potential as a starter is intriguing, but he's looking like a long shot for a rotation spot this spring. Bass probably isn't your best choice in NL-only leagues.

2011	48	2-0	1.676	24	1.283	0	0	99

Matt Belisle, COL

RP

In four seasons with the Rockies, Matt Belisle has forged a 3.53 ERA and a 1.24 WHIP -- not exactly the kinds of numbers you'd look for in a Fantasy reliever. However, over the last three years in particular, there are two numbers that should give owners pause to consider the 32-year-old in deeper leagues. Since 2010, he has thrown 244 innings and recorded 61 holds. Belisle's biggest problem has been allowing hits on balls in play -- particularly on flyballs -- and that's a common problem for pitchers who have to work in Coors Field. There's a chance he could reverse that trend, so he is worth a shot in very deep NL-only leagues, but the risk of that not happening means he is really just a low-end

Year	INN	W-L	ERA	K	WHIP	S	SOP	FPTS
2013 (proj)	81	7-6	3.320	73	1.230	1	0	176.5
2012	80	3-8	3.712	69	1.363	3	10	131.5
2011	72	10-4	3.250	58	1.264	0	7	174

Rafael Betancourt, COL

RP

Rafael Betancourt has been putting up closer-like numbers in relief for several years, so it's easy to forget that 2012 was the first time he was actually entrusted with the closer's role for an extended period. For the most part, Betancourt took to the new job with few problems. He did blow seven of his 38 save opportunities, but he managed to put up a 2.81 ERA, 1.13 WHIP and 57 strikeouts in 57 2/3 innings. Though Betancourt is a flyball pitcher, home runs did not pose a major threat, as he allowed six of them, three of which came at Coors Field. The biggest problem with relying on Betancourt as your Fantasy closer is that he is heading into the final year of his contract. The Rockies could have an incentive to deal him midseason, and if he went to a team that used him in a setup role, you would have to replace his saves. Even with that risk, Betancourt is worth taking in the late rounds of standard mixed league drafts.

Andrew Cashner, SD

RP/SP

Andrew Cashner is the main player the Padres got back for Anthony Rizzo, whose performance in the second half last year speaks for itself. So how did San Diego make out in the deal? Hard to say yet because we've hardly seen Cashner in uniform. Though the Cubs used him in relief, the Padres tried to stretch him out as a starter midway through last season. It looked like a natural fit when he allowed two runs on two hits with one walk and nine strikeouts over 6 1/3 innings in his return from the minor leagues June 28 at Houston, but he didn't get a chance to build off that performance, straining a muscle in his back next time out. He did return for three appearances in September, but by then, he didn't have enough time to make an impression one way or another. With a fastball that hits triple digits, Cashner could be a revelation in Fantasy if he's able to keep his walks down as a starter, but whether the Padres will give him another chance and whether he'll hold up in the role remain to be seen. Because he's already dealing with a thumb injury that will sideline him for the first three weeks of this season, Cashner is a sleeper better left for NL-only leagues.

Aroldis Chapman, CIN

RP

Aroldis Chapman being moved to the rotation could be a boon to his owners in Fantasy. He had 122 strikeouts over 71 1/3 innings in 2012 -- in a relief role. He posted a 1.51 ERA and 0.81 WHIP. And he claims to like starting better. His innings will likely be limited as he builds up arm strength, but he could possibly lead baseball in strikeouts with just 170 innings, maybe less. And for players in leagues where you can slot starting pitchers into relief pitcher spots, Chapman's value is through the roof, as he'll score points with wins, strikeouts, ERA, WHIP -- everything. And he'll blow away even the best closers with the amount of innings he'll throw. Chapman should be given serious consideration as a pick in the first five rounds of drafts in points leagues, as he could be a boon to a team with his starting status. Roto league owners can probably wait until the middle rounds to pick him up.

[Steve Cishek](#), MIA

RP

The Marlins' 2012 season was nothing short of a disaster, but Steve Cishek qualified as a genuine bright spot. While the Marlins secured All-Star Heath Bell to be their closer with a three-year, \$24 million deal, it was Cishek who ultimately was entrusted with the ninth inning. Manager Ozzie Guillen finally pulled the plug on Bell after several implosions, and the younger, cheaper Cishek proved to be reliable. Though he was wild at times, Cishek made up for it by striking out more than a batter per inning and allowing only three home runs over 63 2/3 innings. He wound up notching 15 saves, even though he served as the closer for less than half the season. Cishek also blew four saves, but two of those came when he was still serving as a setup man for Bell. With Bell now departed for Arizona, the closer's job appears to be all Cishek's. Because of his limited track record, Cishek is merely an endgame option for standard mixed league owners, but he could pay a nice dividend on a small investment of a late-round pick.

2011	55	2-1	2.634	55	1.171	3	3	138.5

[Tyler Clippard](#), WAS

RP

With Drew Storen out for the first three-and-a-half months of the 2012 season due to elbow surgery, Tyler Clippard finally got a chance to be the Nationals' closer. After two successful seasons as the team's setup man, Clippard fared well in the ninth inning role. In fact, he managed to remain as the Nationals' closer, even after Storen returned from the disabled list in July. However, Clippard imploded in September, raising his ERA from 2.73 to 3.72, and Storen took his job back for the final days of the season and the playoffs. Back in his familiar setup role for 2013, Clippard loses value since he won't provide saves, but he still has relevance in deep leagues due to his contributions in strikeouts and holds.

[Josh Collmenter](#), ARI

RP/SP

With the amount of disdain some Fantasy owners use when speaking of Josh Collmenter, one might expect to open up his player page and see disturbing images of him pushing old ladies down stairs. But this is not the case. Collmenter has two straight seasons of sub-4.00 ERA and a career WHIP of 1.14. In 28 appearances in 2012, Collmenter struck out 80 batters in 90 1/3 innings. So why the hatred? Maybe it was his first half, when he put up a 5.75 ERA in 12 appearances, including four starts. Perhaps it was Arizona's insistence on trotting out Collmenter instead of promoting Trevor Bauer. Collmenter, though, doesn't really deserve the scorn. He's a good pitcher with good numbers throughout his career, both in the minors and majors. Collmenter doesn't deserve the Fantasy hatred he's received, but he won't have much value in 2013, either. This, however, is based more on his role, with Arizona having an embarrassment of pitching riches. Collmenter will likely enter 2013 in long relief, which limits his value to NL-only leagues.

2011	154	10-10	3.382	100	1.069	0	0	350

[Frank Francisco](#), NYM

RP

Frank Francisco signed with the Mets to be their closer last season, and while he converted 23 of 26 save chances, his campaign was anything but effective. He posted a career-worst 5.53 ERA in 48 outings and was limited for much of the season due to a myriad of injuries. While he was still able to record more than a strikeout per inning, the right-hander needed elbow surgery in the offseason and was shut down early this spring with inflammation in the elbow. The Mets still think they'll have him for opening day, but with his health and effectiveness both in question, he's pretty much a last resort as far as closers go. And if you draft him, you'll probably want to handcuff Bobby Parnell to him.

Year	INN	W-L	ERA	K	WHIP	S	SOP	FPTS

2011	51	1-4	3.553	53	1.322	17	21	197.5

[Kyuji Fujikawa](#), CHC

RP

After racking up 220 career saves in Japan, Kyuji Fujikawa signed with the Cubs in the offseason and is expected to help bolster a bullpen that struggled in 2012. The right-hander compiled a 1.36 ERA in over 300 appearances for the Hanshin Tigers over the last six seasons and struck out well over a batter per inning. Fujikawa is expected to be the setup man for closer Carols Marmol to begin the 2013 campaign, but as owners know, Marmol, who was nearly traded in the offseason, has barely been able to hold onto the closer's role over the last two seasons. The 32-year-old should be able to put up a decent ERA with respectable strikeouts in his first year in the majors and his value in Fantasy would receive a serious shot in the arm if he ends up seeing save chances in Chicago. For now, however, plan on leaving Fujikawa for the deepest of NL-only formats on Draft Day.

Year	INN	W-L	ERA	K	WHIP	S	SOP	FPTS
2013 (proj)	64	3-3	2.953	63	1.250	6	0	170.5

[Luke Gregerson](#), SD

RP

Luke Gregerson is one of those relievers who would be great as a closer if he ever got the chance. We saw that scenario played out late last year, when Huston Street was sidelined by a strained calf for about six weeks. Much to the delight of the many Fantasy owners scrounging for saves late in the year, Gregerson converted 8 of 9 save opportunities with a 1.15 WHIP and nearly a strikeout per inning in 17 appearances from Aug. 13 to Sept. 20. Unfortunately, the Padres and Street had just agreed to a two-year deal one month earlier, so naturally, when Street was able to return in late September, he was immediately reinserted into the closer role. With his low ERA and WHIP and high strikeout rate, Gregerson has value in deeper Rotisserie leagues even as a middle reliever, and given Street's propensity for injury, he's a must-have handcuff in NL-only formats. But in standard leagues, you have no reason to bother with him on Draft Day.

Year	INN	W-L	ERA	K	WHIP	S	SOP	FPTS

2011	56	3-3	2.748	34	1.365	0	4	95

[Jason Grilli](#), PIT

RP

Jason Grilli enjoyed the finest campaign of his career last season as he became a reliable setup man for the Pirates. He posted a 2.91 ERA over 64 appearances and finished tied for fourth in the majors with 32 holds. He also went 2 for 5 in save chances behind closer Joel Hanrahan. With Hanrahan being traded to Boston in the offseason, the 36-year-old steps into the closer's role for Pittsburgh and has some intriguing appeal in Fantasy on Draft Day. While Grilli has just five career saves, he has shown over the last two seasons that he might have what it takes to pitch in the late innings and could be a reliable option in Fantasy in 2013. Owners should keep in mind the Pirates brought back Mark Melancon in the Hanrahan deal for insurance just in case Grilli falters, but plan on targeting the right-hander in the later rounds of deeper mixed leagues on Draft Day.

2011	33	2-1	2.480	37	1.194	1	1	80.5

[David Hernandez](#), ARI

RP

David Hernandez improved on his numbers for the fourth consecutive year, finally dipping his ERA below 3.00 and raising his strikeout rate to a near-elite level. Hernandez finished 2012 with a 2.50 ERA and 1.02 WHIP, while striking out 98 batters in 68 1/3 innings. He also notched four saves. As good as Hernandez is, he probably has a shot at no more than a handful of saves this year, as J.J. Putz returns as the closer and Arizona traded for Heath Bell in the offseason. Hernandez still has value in NL-only leagues, though, as he can help keep ERA and WHIP down while striking out a lot of batters (more Ks in 2012 than Bartolo Colon, John Axford and Jonathan Papelbon). He can be taken in reserve rounds of NL-only drafts.

2011	69	5-3	3.375	77	1.139	11	14	236.5

[Kenley Jansen](#), LAD

RP

It finally happened in 2012. Kenley Jansen, with his near-unhittable stuff and off-the-charts strikeout rate, finally ascended to the closer role after the miscast Javy Guerra faltered in April. And the returns were about what everyone expected. He was terrific in the role. Maybe he had a few more blown saves than anyone would like because of a few too many home runs allowed, but nothing out of the ordinary for a young player just settling into the role. And once he settled into the role, Jansen's peripherals suggested he could be another Craig Kimbrel. Now, though, we may never know the full extent of his potential. An irregular heartbeat forced him out of ninth-inning duties last September and allowed newcomer Brandon League to record six saves with a 0.55 ERA in his absence. So naturally, the Dodgers signed League to a three-year, \$22.5 million deal in the offseason and declared him their closer going forward. Jansen should be healthy now -- he had surgery to correct the heart issue in October -- but as a setup man, he'll only factor in Rotisserie leagues deep enough that his ERA and WHIP will make a difference. Of course, League is no stranger to failure, having lost the closer gig in Seattle earlier in 2012, so Jansen has some draft value as a prospective closer as well.

2011	54	2-1	2.851	96	1.044	5	6	178

[Joe Kelly](#), STL

RP/SP

Joe Kelly was a staple of the Cardinals rotation for most of 2012 and really didn't do anything to lose his job in September. But between Jaime Garcia's return from the DL, Chris Carpenter's miraculous recovery and Lance Lynn's second chance in the starting rotation, Kelly quickly became an afterthought, banished to the bullpen for the final two weeks and beyond. And now, even with Kyle Lohse and Carpenter (again) out of the picture, he still faces an uphill battle for a rotation spot thanks to top prospects Shelby Miller and Trevor Rosenthal, who showed with their contributions late last season that they're just about major-league ready. Of course, that's not such a bad thing for Fantasy owners. After all, Miller and Rosenthal are the ones with all the upside. Kelly, though a hard-thrower, doesn't have strikeout-per-inning potential and, if his minor-league track record is any indication, is too hittable to maintain a WHIP under 1.30. He'd be adequate in Fantasy, but not the type of pitcher who'd make or break your draft. For now, you can leave him for NL-only leagues.

Year	INN	W-L	ERA	K	WHIP	S	SOP	FPTS
2013 (proj)	110	8-7	3.764	83	1.373	0	0	219.5
2012	107	5-7	3.533	75	1.383	0	0	195.5

[Kyle Kendrick](#), PHI

RP/SP

Kyle Kendrick didn't have the most impressive numbers of his career in 2012, but they came awfully close to the litany of career-bests he set in 2011, which may have been just as impressive. Perennially close to hitting a stride, Kendrick now has two solid seasons in a row, with a combined 3.61 ERA and 1.25 WHIP. He saw a slight improvement in his strikeout rate in 2012, but Kendrick will never put up gaudy enough numbers for that to be a real asset. He is slated to be the fourth starter for the Phillies in 2013, which should give him a better mindset, as

opposed to the constant back-and-forth of starter/reliever status from the last two seasons. Kendrick is solid, but not spectacular. Consider him a late-round option in NL-only leagues.

Year	INN	W-L	ERA	K	WHIP	S	SOP	FPTS
2013 (proj)	175	10-11	4.063	113	1.331	0	0	329.5

2011	115	8-6	3.218	59	1.221	0	0	229.5

[Craig Kimbrel](#), ATL

RP

It wasn't as much the rookie record 46 saves that captured Craig Kimbrel NL Rookie of the Year honors in 2011 as it was his 2.10 ERA, 1.04 WHIP, 5.6 hits per nine innings and 14.6 strikeouts per nine innings -- numbers so out-of-this-world that few thought he'd be capable of exceeding them. But that's exactly what he did in 2012, further removing himself from the rest of the closer crop with a 1.01 ERA, 0.65 WHIP, 16.7 strikeouts per nine innings and 3.9 hits per nine innings. The strikeout and hit rates are especially astounding. They're the lowest marks for any pitcher with at least 40 innings in the modern era. The only closer who compared with Kimbrel in terms of Fantasy value last year was Aroldis Chapman -- who himself had a 1.51 ERA, 0.81 WHIP, 15.3 strikeouts per nine innings and 4.4 hits per nine innings -- but with Chapman now moving to the starting rotation, Kimbrel clearly stands alone at the position entering 2013. Of course, because Chapman retains eligibility at relief pitcher, he might actually project as the No. 1 player at the position in standard Head-to-Head leagues. Kris Medlen, another converted reliever, has a claim to that title as well. But among those actually getting saves, you won't find better than Kimbrel on Draft Day. He's the one of his kind projected to go in the early rounds.

[Wade LeBlanc](#), MIA

RP/SP

In joining the Marlins a year ago, 2012 was the first season that Wade LeBlanc spent away from the Padres' organization, but the lefty fell into a familiar pattern with his new club. LeBlanc spent the previous four seasons splitting time between Triple-A and the majors, and the Marlins had him spend significant time at both levels again last season. After putting up respectable numbers (3.74 ERA, 1.13 WHIP) at Triple-A New Orleans during the season's first half, the Marlins brought LeBlanc up to stay for the second half. For the first time in his major league career, LeBlanc showed the sharp control that he possessed in the minors, and he registered a career-low 3.67 ERA. He was used mostly in relief last year, but in 2013, LeBlanc is expected to fill a spot in the Marlins' rotation. His flyball tendencies are a good fit for Marlins Park, and he is worth targeting in all NL-only leagues.

2011	80	5-6	4.632	51	1.406	0	0	136.5

[Brandon League](#), LAD

RP

If back in July you predicted Brandon League would sign a three-year, \$22.5 million deal in the offseason, not even he would have believed you. He had lost his closer gig in Seattle, was allowing baserunners left and right and seemed to be just counting down the days until he hit the open market. But a deadline deal brought him to the Dodgers, and an irregular heartbeat for Kenley Jansen put him back in the closer role. The rest was all on him. For that one month when Jansen was on the mend, League recorded six saves with a 0.55 ERA in 15 appearances. And just like that, his value was restored -- beyond restored, even. Not only did the Dodgers dole out a small fortune for him, but they decided they liked him in the ninth inning better than the electric Jansen, who had surgery to correct his heart problem in the offseason. Because of that, League's Fantasy value certainly sees a boost heading into 2013, but you have to figure he'll have a short leash given that Jansen is the more talented of the two. If League does keep the role, he should pile up a healthy number of saves for an expected contender in Los Angeles, but since he'll have to look over his shoulder for Jansen, he's no better than a top-30 reliever on Draft Day.

Year	INN	W-L	ERA	K	WHIP	S	SOP	FPTS

2011	61	1-5	2.788	45	1.076	37	42	360.5

[Carlos Marmol](#), CHC

RP

Carlos Marmol continued his descent of the Fantasy ranks last season as he struggled again in the closer's role for the Cubs. He converted 2 of 4 save chances with a 6.23 ERA over his first 12 appearances before being taken out of the role and missed time in the first half due to a hamstring injury. The right-hander was more effective after returning and regained his role in the ninth inning. He finished the year 20 for 23 in save chances and posted a 3.42 ERA in 61 appearances. While he struck out 72 in 55 1/3 innings pitched, it was the third straight campaign his strikeout numbers dropped. The Cubs tried trading the 30-year-old in the offseason to the Angels, but since the deal broke down, Marmol heads into 2013 as the closer again. It's beginning to look like Marmol's dominant 2010 campaign was more of an aberration and he has not shown much over the last two seasons to indicate he will be a dominant closer again. Owners should plan on targeting Marmol as a late-round option in most formats on Draft Day.

Year	INN	W-L	ERA	K	WHIP	S	SOP	FPTS
2013 (proj)	70	2-4	3.600	86	1.457	30	0	327

2011	74	2-6	4.013	99	1.378	34	44	349.5

[Sean Marshall](#), CIN

RP

Sean Marshall began 2012 as Cincinnati's closer, racking up seven saves (and then two later in the season for a total of nine) before being replaced by Aroldis Chapman, who would go on to become one of the more dominating closers in the game. Marshall, though, is far more effective as a middle reliever, capable of helping a Fantasy team with a low ERA and WHIP, while striking out about a batter per inning. NL-only players who complement the starters and closers with effective relievers should consider Marshall for a roster spot.

Year	INN	W-L	ERA	K	WHIP	S	SOP	FPTS
2013 (proj)	72	6-4	2.375	82	1.111	3	0	201

2011	76	6-6	2.260	79	1.097	5	9	209.5

[Kris Medlen](#), ATL

RP/SP

Kris Medlen had a nice little run as a starter before needing Tommy John surgery in 2010, but nothing that would lead you to believe he was capable of doing what he did over the final two months of 2012. Then again, no one should be capable of going 9-0 with a 0.97 ERA, 0.80 WHIP and 9.0 strikeouts per nine innings over a 12-start stretch. That's Greg Maddux-type stuff. And here's the kicker: Those were the only starts Medlen made all season, having spent the first four months in the bullpen. Saying he made the most of what little opportunity he had almost doesn't do the performance justice. Considering it came at a make-or-break point as far as Fantasy is concerned, Medlen is a hero to many right now. And that's why he's so difficult to rate in Fantasy. On the one

hand, you don't want to judge a guy on only 12 starts, but on the other hand they were 12 incredible starts. Plus, his minuscule walk rate and superior secondary pitches suggest the results weren't so far-fetched. Factor in his relief pitcher eligibility and Medlen is a one-of-a-kind Fantasy option. He isn't Justin Verlander or Clayton Kershaw. He isn't even Madison Bumgarner or James Shields. But he isn't far off either. If you're the type willing to gamble on a limited track record, you won't want to let him slip too far beyond the top 15 starting pitchers.

2011	2	0-0	0.000	2	0.429	0	0	7

[Shelby Miller](#), STL

RP/SP

Though he was long considered the top prospect in the Cardinals organization, Shelby Miller's stock nearly collapsed when he compiled a 6.17 ERA over his first 17 starts at Triple-A Memphis last year. But the way he ended the season, with a 1.32 ERA, 0.95 WHIP and 10.5 strikeouts per nine innings in six appearances (including one start) for the big club, has many thinking he's a favorite for NL Rookie of the Year honors this year. His struggles at Triple-A weren't as much a matter of health or ability as stubbornness and pride. Though the command of his fastball was off, he relied on the pitch more than ever. Eventually, the Cardinals forbade him from shaking off the catcher, and that's about the time his season turned around. A mechanical adjustment also contributed to his 2.88 ERA over his final 10 starts. The harsh lesson clearly translated to the majors, where he overpowered hitters with a high-90s fastball and sharp curveball. With the departure of Kyle Lohse this offseason, Miller is presumably in line for a rotation spot, but the Cardinals have a few other up-and-comers in Lance Lynn, Joe Kelly and Trevor Rosenthal. Miller's upside is the most attractive of that group, but his uncertain role will allow him to slip to the late rounds on Draft Day.

[Jason Motte](#), STL

RP

During a 2011 season in which the Cardinals changed closers five times, Jason Motte held the reins for the Cardinals' postseason run and his efforts helped them claim a World Series title. So as you might expect, he got first crack at the role in 2012 and didn't disappoint, tying for the NL lead with 42 saves. His high-90s fastball helps him strike out more than a batter per inning and his low walk rate -- something that didn't come so easily for the converted catcher -- keeps his WHIP below 1.00. The Cardinals are built for the postseason, which means Motte should once again have plenty of opportunities in 2013. And now that he has solidified the role, you won't find too many closers short of Craig Kimbrel who are as attractive as him. When you draft the 30-year-old Motte, you're drafting one of the few safe options at the position with the highest turnover, not to mention a reliever capable of contributing something other than saves. He's easily a top-10 reliever, if not top-five.

Edward Mujica, STL

RP

Though Edward Mujica doesn't have much of a reputation in Fantasy, his 3.20 ERA and 1.00 WHIP over the last three seasons suggest he's one of the more reliable middle relievers in the NL. He was especially impressive after coming over from the Marlins in a midseason trade last year, posting a 1.03 ERA in 29 appearances for the Cardinals. He doesn't have strikeout-per-inning potential and probably wouldn't be next in line for saves if something happened to Jason Motte. But if you're looking for a cheap option to help keep your ERA and WHIP down in a deeper Rotisserie league, Mujica is a name to consider.

Jonathan Papelbon, PHI

RP

Jonathan Papelbon made what experts call a "seamless transition" to the National League in 2012, throwing a career-high 70 innings en route to a 38-save season. His 2.44 ERA was part of a continued lowering over the past three years (from 3.90 in 2010 and 2.94 in 2011) and his 92 strikeouts were the most of any season in his career. Consider, also, that Halladay likely lost save opportunities thanks to the fluke bad luck suffered by Cliff Lee (only six wins in an otherwise excellent season) and the injury-shortened campaigns of Roy Halladay (shoulder/lat issues) and Vance Worley (elbow problems dampened his numbers), and one can see why his 2013 could be an improvement on last season. Papelbon has a career 2.34 ERA and strikes out over a batter per inning. He has averaged 37 saves over the last eight seasons, and has pitched fewer than 64 innings just once in that span. A top closing option, Papelbon should benefit from a healthier Phillies team surrounding him in 2013 and will be off the board in the middle rounds of most formats.

2011	64	4-1	2.938	87	0.933	31	34	392.5

Bobby Parnell, NYM

RP

Bobby Parnell had the best campaign of his career in 2012, as he became a dominant arm out of the bullpen for the Mets. He posted a career-best 2.49 ERA in 74 appearances and also converted 7 of 12 save chances while filling in for the injured Frank Francisco. The right-hander also struck out 61 in 68 innings pitched while walking just 20. With Francisco being an inconsistent and injury-plagued ninth-inning option, Parnell could see more save opportunities in 2013 and, at age 28, is still progressing as a pitcher. Owners in NL-only formats should target Parnell on Draft Day, particularly as a handcuff option for Francisco.

J.J. Putz, ARI

RP

On May 9, 2012, Diamondbacks closer J.J. Putz gave up four runs in a non-save situation against the Cardinals. His ERA ballooned to an even 9.00. Putz spent the next four months pushing it all the way down to 2.82. It wasn't quite the 2.17 ERA and 45 saves of 2011, but Putz's 2012 (2.82 and 32 saves) was still impressive. What's interesting for this season is the addition of reclamation project Heath Bell. Along with David Hernandez, the back end of the Diamondbacks' bullpen could be one of the strongest in baseball. This both helps (cleaner appearances and innings when he comes in) and hurts (if he gets off to a slow start again, there are more options) our man Putz. But expect manager Kirk Gibson to have a long leash again with his closer, as he tended to spell Putz a little in 2012, but never came close to really replacing him. Putz will likely be drafted in the later part of the middle rounds this year.

2011	58	2-2	2.172	61	0.914	45	49	454.5

Sergio Romo, SF

RP

After nearly three years of stellar work as a setup man, Sergio Romo finally got his chance to close late last season. The Giants had to first endure Brian Wilson getting sidelined by Tommy John surgery, Santiago Casilla struggling with blisters and the abandonment of a closer-by-committee experiment for Romo to get his chance, but once he grasped the closer's role, he didn't let it go. From August 23 forward, Romo was a perfect 9 for 9 in save opportunities with a 1.04 ERA and 17 strikeouts over 17 1/3 innings. As a reliever who typically strikes out more than a batter per innings but seldom walks anyone, Romo has a chance to be an elite closer. In fact, the only thing that should prevent owners from targeting him among the first half dozen or so closers in drafts is that Giants manager Bruce Bochy has stated that he will give other relievers occasional shots at save opportunities. Still, Romo deserves to be drafted no later than the middle rounds.

Trevor Rosenthal, STL

RP

Most baseball fans know Trevor Rosenthal as that young guy who could throw 100 miles per hour out of the Cardinals bullpen, but to prospect hounds, he's more than that. In the minors, he was a starter, and his ability to hit triple digits was just as useful in that role. OK, so maybe he dialed it back to the high 90s to make it through a full six innings, but you get the idea: His stuff is scary regardless of his role. Eventually, the Cardinals would like to try it out in more than just one-inning spurts, but right now, they have the misfortune of having a few other flamethrowers ready to occupy rotation spots -- namely, Shelby Miller and Lance Lynn. Of course, now that he's proven to be an asset in the majors, how could they justify sending Rosenthal down? Hopefully, if he doesn't win a rotation spot this spring, they'll just grit their teeth and do it. If they decide to keep him around as a reliever, he's in jeopardy of getting stuck in that role long-term. Rosenthal's capacity for strikeouts and proximity to the majors make him a sleeper even in standard mixed leagues, but as a keeper option, he comes with some risk.

2012	23	0-2	2.779	25	0.926	0	0	41.5

Rafael Soriano, WAS

RP

Rafael Soriano began 2012 much differently than how he ended the season. Coming in, he was trying to erase memories of a 4.12 ERA in an injury-marred 2011. But after Mariano Rivera's knee injury -- and David Robertson's oblique strain shortly thereafter -- Soriano grabbed the reins of the closer role and never let go. He saved 42 games despite not getting his first save until May 10. He finished the year with a 2.26 ERA and 1.17 WHIP. He struck out more than a batter per inning. In short, he re-established himself as a dominant closer, something the baseball world seemed to forget, despite his 45 saves in 2010 with the Rays. In middle relief, Soriano is solid. As a closer, he brings his game up a notch and is as reliable as almost any in the game. At 33, he's technically past his prime, but closers tend to stick around a little longer and defy most age rules. If he lands as a closer somewhere, Soriano can be counted on for 40 saves, a strikeout per inning and a sub-3.00 ERA. He will likely be drafted in the middle rounds.

2011	39	2-3	4.119	36	1.297	2	5	79

[Craig Stammen](#), WAS

Over the 2009 and 2010 seasons, Craig Stammen made 38 starts for the Nationals, but he didn't have much success, and things didn't go much better in 2011, when he made 24 starts for Triple-A Syracuse. Last season, the Nationals handed Stammen a spot in their bullpen out of spring training, and the new role revived his career. Pitching in long relief, Stammen threw harder, missed far more bats, and finished the season with a 2.34 ERA. Though Stammen recorded nearly a strikeout per inning, what distinguished him in Fantasy -- particularly in Head-to-Head leagues -- were the 88 1/3 innings he logged. Having made 28 appearances of two innings or more, Stammen rewarded owners in leagues that give points for innings, and he did so without making them pay in other categories. He could be a sneaky relief pick yet again in deeper points leagues.

2011	10	1-1	0.871	12	0.677	0	0	31

[Drew Storen](#), WAS

In 2011, Drew Storen emerged as a top three closer in Fantasy, but bone chips in his right elbow prevented him from having a similar season in 2012. Storen began the season on the disabled list and had elbow surgery in April, which forced him out until mid-July. When he did return, he had to wait in line to get his closer's role back, as Tyler Clippard held down the job until the final weeks of the season. Storen finally got his chance in the latter half of September and he converted five of seven opportunities between the regular season and postseason. That success didn't help Storen much heading into 2013, as the Nationals went out and signed Rafael Soriano to be their new closer. Owners will have to be content with targeting Storen as a top setup man in leagues that reward holds, as he can provide help with ERA and WHIP and offer a decent strikeout rate as well.

Year	INN	W-L	ERA	K	WHIP	S	SOP	FPTS

2011	75	6-3	2.748	74	1.022	43	48	489

[Huston Street](#), SD

After playing in arguably the worst venue for pitchers during his three years in Colorado, Huston Street enjoyed playing in arguably the best venue for pitchers last year, posting an insanely low 0.72 WHIP thanks to an impossibly low 3.9 hits per nine innings. The Padres enjoyed him playing there as well, signing him to a two-year extension before the season was done. Clearly, they think he's capable of repeating such numbers even with the fences coming in at PETCO Park this year, and he has a steady enough track record that they may just be right. But the biggest issue for Street isn't performance; it's health. He missed almost all of May with a strained right shoulder and most of August and September with a strained left calf. It was the second time in three years he finished with fewer than 45 appearances. That said, Street's brittleness could make him a bargain in Fantasy by allowing him to slip beyond the top 20 relievers, so don't overlook him because of it. When healthy, he has the potential to perform like a top 10 option at the position.

2011	58	1-4	3.857	55	1.217	29	33	295.5

[Jonny Venters](#), ATL

At this time a year ago, some wondered if Craig Kimbrel, who recorded a rookie record 46 saves in 2011, was really the best reliever in the Braves bullpen. That's because Jonny Venters himself was coming off an All-Star performance in which he compiled a 1.84 ERA, 1.09 WHIP and 9.8 strikeouts per nine innings in an MLB-leading 85 appearances. Unfortunately, the only one of those numbers that improved for him last year was the strikeout rate, which jumped to 10.6 per nine innings. Otherwise, he was as much of a disappointment as a middle reliever can be in Fantasy, giving up oodles of hits as he struggled with his command. His velocity also suffered at times, which only fortified the belief

RP

that his struggles were in response to overuse in 2011. After spending more than two weeks on the DL with an elbow impingement in mid-July, Venters returned to post a 1.71 ERA and 1.18 WHIP over his final 26 appearances. The chances of a bounce-back season for the left-hander are high enough that he's still worth drafting in leagues where middle relievers are worth drafting, but not quite at last year's price tag. Rest assured, Kimbrel's job is safe for the foreseeable future.

Year	INN	W-L	ERA	K	WHIP	S	SOP	FPTS
2013 (proj)	77	5-3	2.230	86	1.239	2	0	193
2012	59	5-4	3.222	69	1.517	0	3	110.5
2011	88	6-2	1.841	96	1.091	5	9	260

[Carlos Villanueva](#), CHC

After making 13 starts in 2011, Carlos Villanueva was needed in the rotation again for the Blue Jays in 2012 and enjoyed a productive campaign. He made a career-high 16 starts and went 5-7 with a 4.50 ERA in those outings. He also struck out 86 in 92 innings pitched as a starter and posted a personal-best 122 strikeouts in 125 1/3 innings overall. With the Blue Jays addressing their rotation needs via trade during the offseason, Villanueva signed a two-year deal with the Cubs and will compete for a starting role. Chicago only has a couple of openings in the rotation locked up so the right-hander is expected to compete with the likes of Scott Feldman and Scott Baker for the final two spots. Keep an eye on how he does as the 29-year-old could put up some decent numbers pitching in the National League again (he played with the Brewers previously). If he breaks camp as a starter, Villanueva would be worth a look in NL-only formats and some deeper mixed leagues on Draft Day.

Year	INN	W-L	ERA	K	WHIP	S	SOP	FPTS
2013 (proj)	95	5-4	4.168	86	1.274	0	0	193

2011	107	6-4	4.037	68	1.262	0	1	205

[Brian Wilson](#), SF

In 2009 and 2010, Brian Wilson put up back-to-back seasons in which he finished among the top five relievers in Fantasy, but since then, elbow woes have taken their toll. Wilson missed all but the first week of the 2012 season due to Tommy John surgery, and in the space of less than a year he had gone from being the Giants' closer to being non-tendered. Thrust upon the free agent market, Wilson could catch on with a team in need of a closer. As we saw with Joe Nathan a couple seasons ago, it can take a while for a closer to regain his footing after Tommy John surgery, so it could take Wilson some time to reestablish a high level of performance -- and that's assuming someone even gives him a chance to close this year. Like Nathan, Wilson could get that opportunity and eventually perform like a top reliever again, so at minimum, he is worth a flyer in the later rounds of standard mixed league drafts.
